

**PROPOSAL FOR DRAFT SUPPLEMENT 6 TO THE 02 SERIES OF AMENDMENTS
TO REGULATION No. 7**

(Position, stop and end-outline marker lamps)

Transmitted by the secretariat

Note: The text reproduced below consolidates the amendments agreed in principle by GRE during its forty-fifth session and omitted in the session report: in TRANS/WP.29/GRE/44 para. 26 anticipated that the amendments concerned should be contained in annex 2 to the report, however, annex 2 concerns Regulation No. 70 (see also TRANS/WP.29/GRE/44, para. 46).

The amendments refer to document TRANS/WP.29/GRE/1998/21/Rev.2.

GRE agreed that the final adoption of this document, as amended, should only take place in combination with the amendments proposed in documents TRANS/WP.29/GRE/2000/4 and TRANS/WP.29/GRE/2000/5 and Add.1 (see TRANS/WP.29/GRE/44, para. 27).

To correct the omission it is therefore proposed by the secretariat to incorporate the below-mentioned amendments in the consolidated text of the proposal for draft Supplement 6 to the 02 series of amendments to Regulation No. 7, which may also include the most recent document TRANS/WP.29/GRE/2000/23.

Paragraphs 14. and its subparagraphs, amend the references to "Supplement 5 to the 02 series of amendments" to read "Supplement 6 to the 02 series of amendments" (14 times) and eliminate the square brackets marking the period of "36" months (in paragraphs 14.1.2. and 14.1.4.).

Annex 1, first sentence, amend to read:

"In all cases, the minimum vertical angles of light distribution in space are 15E above and 15E below the horizontal for all categories of devices included in this Regulation, except:

- (a) for lamps with a permissible mounting height # 750 mm above the ground, for which they are 15E above and 5E below the horizontal;
- (b) for category S3 stop lamp for which they are 10E above and 5E below the horizontal."
