

Side Impact Child Program

Objective: To Develop a test procedure that simulates side impact crashes for the evaluation of all child restraint types

Suzanne Tylko

9th meeting of the Informal Group on Child Restraint System

March 11, 2009

Crash Simulation

1. Intrusion
2. Energy transfer
3. Load path

Occupant Protection

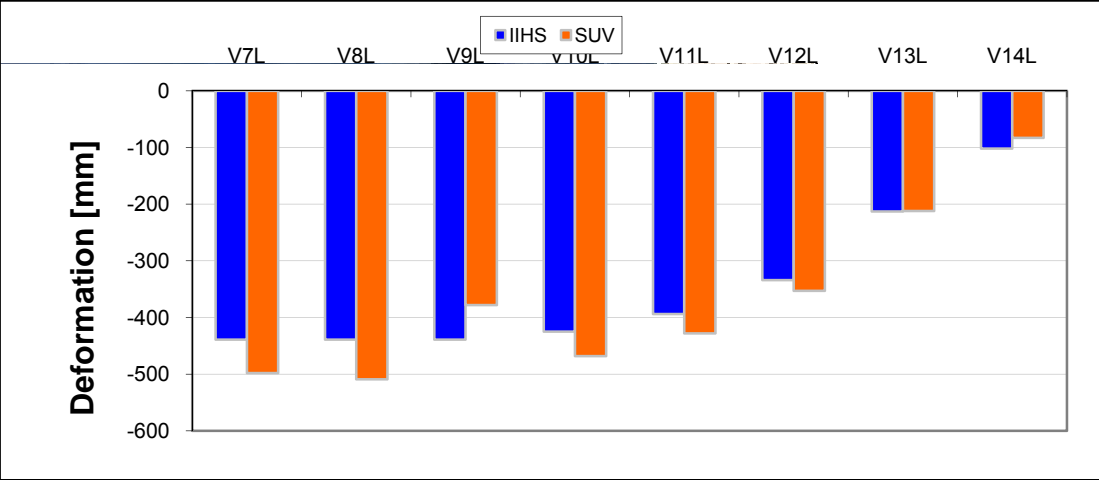

Q3s RESPONSES

	Head	Chest	Pelvis
IIHS	79.1	61.1	-126.4
SUV	61.5	130.8	-150

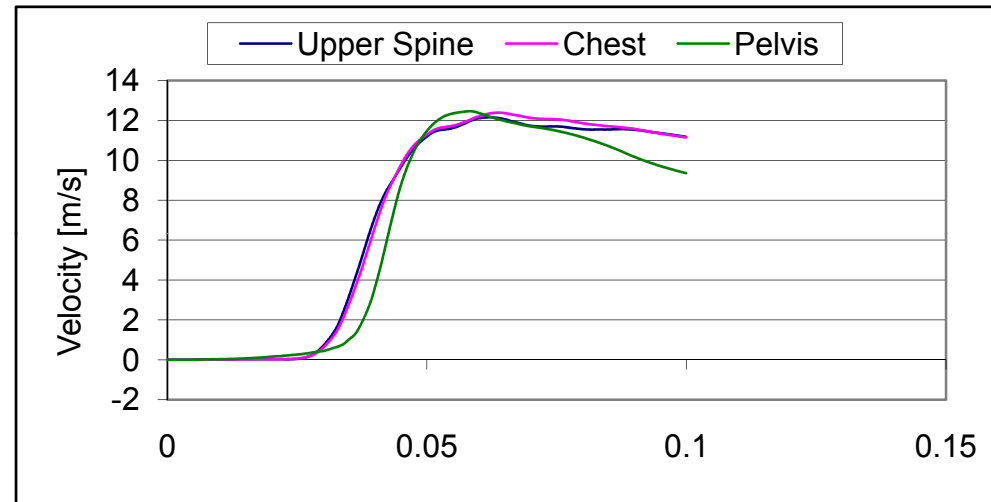

Kinematics as a Function of Impactor

RIGID WALL

Relative velocity between pelvis & spine -1.5 m/s

Kinematics as a Function of Impactor

CHAMFERED WALL

Relative velocity between pelvis & spine +2.9 m/s

Kinematics as a Function of Impactor

SMALL CAR

Relative velocity between pelvis & spine +2.8 m/s

HEAD

PELVIS

Crash Simulation Method

1. Reproducible on different sleds;
2. Interface between the child seat and door;
3. Energy transfer
4. Load path
5. Validate to car-to-car results
