

Proposal for amendments to ECE/TRANS/WP.29/GRRF/2012/22 (Proposal for a gtr on tyres)

I. Proposal

Paragraphs 3.2.1.9. and 3.2.1.10., amend to read:

- "3.2.1.9. The font to be used for Tyre Identification Number shall be ~~a version of~~ Futura Bold, Modified Condensed, Gothic, or OCR-B (as defined in ISO 1073-2:1976).
- 3.2.1.10. The characters shall have a height of at least 6 mm and a positive or negative relief of between 0.5 to 1.0 mm, **measured from the surface surrounding the characters by less than 0.5 mm.**"

II. Justification

There is no need to refer to "a version" of the font because Part 574 allows all of the three versions.

There is a need for a definition of the relief depth because it is important for achieving sufficient quality of the TIN characters.
