Rear Impact Research Objectives

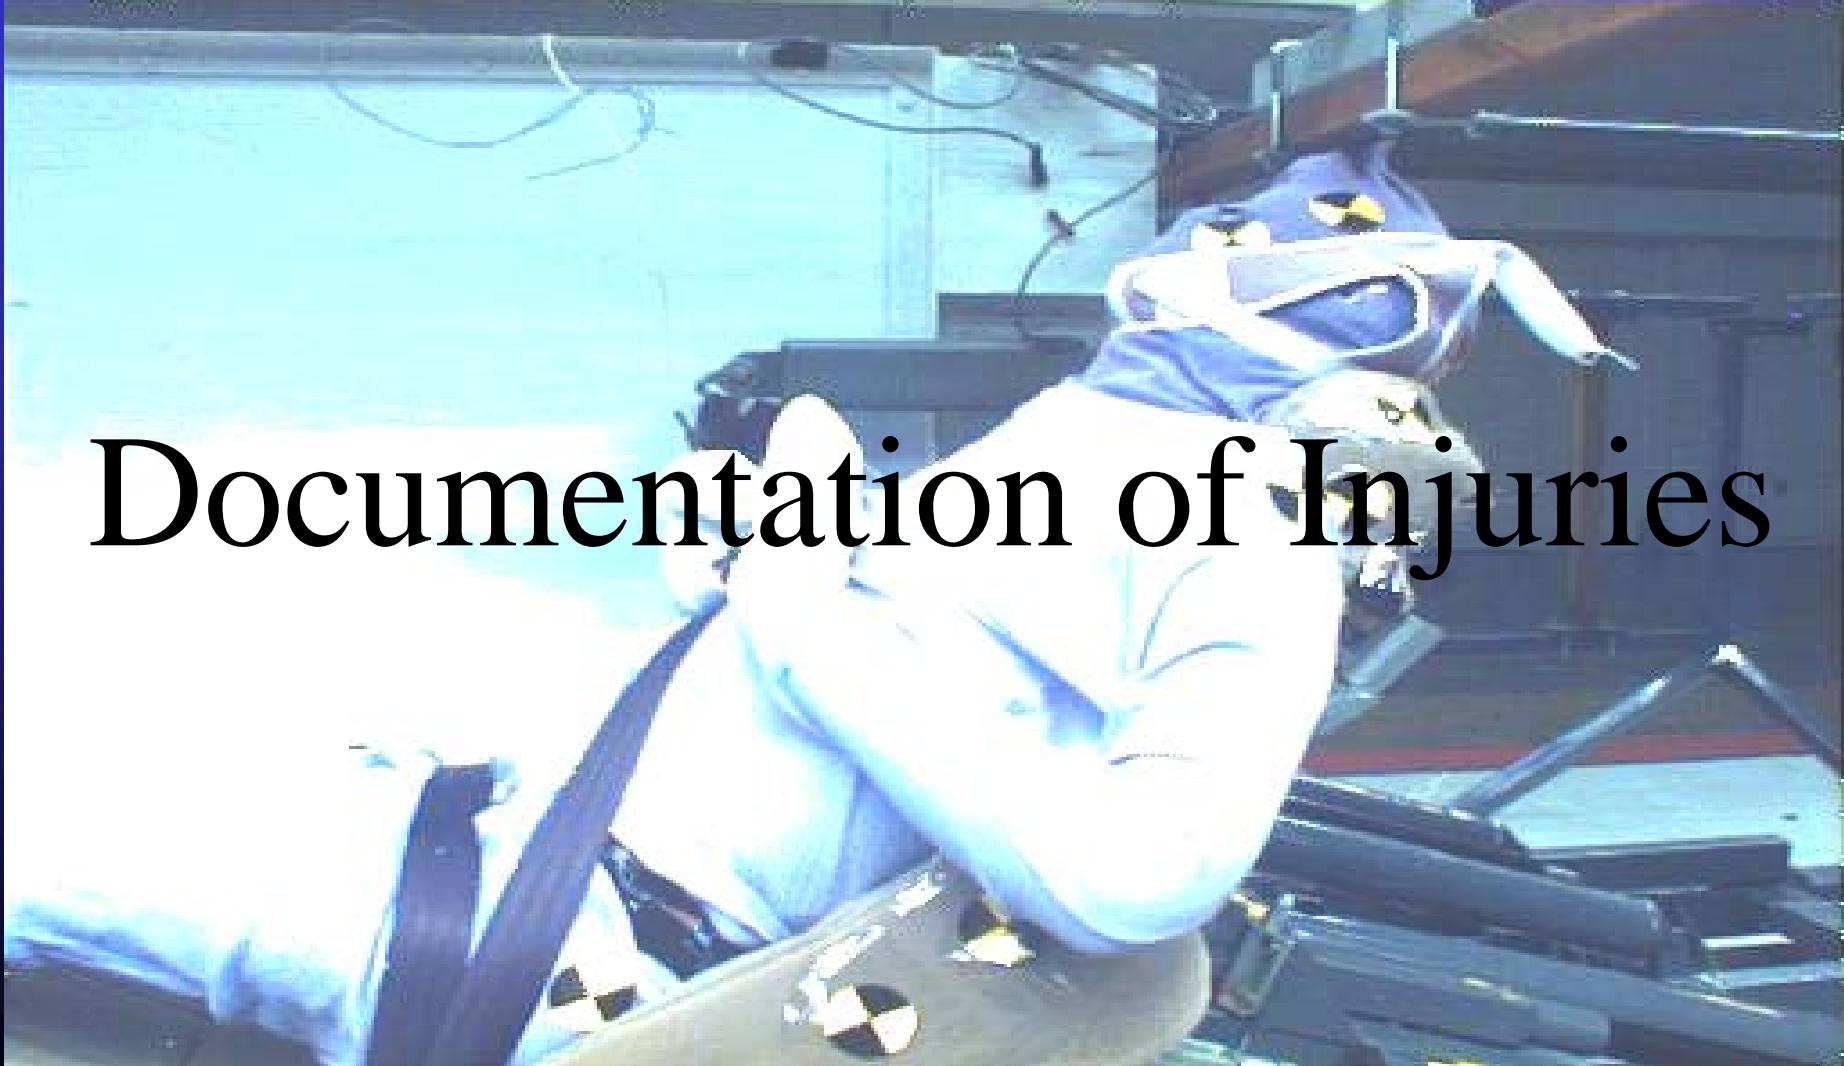

- **Evaluate biofidelity of available RIDs (BioRID, RID3D, HyIII)**
 - Choose biofidelity test condition
 - Develop experimental seat for rear impact sled testing
 - Conduct sled tests
 - PMHS (Post-Mortem Human Subjects)
 - Dummies (BioRID II, RID3D, Hybrid III)
 - Assess biofidelity and repeatability of dummies
- **Investigate the mechanism of injury**
 - Develop and validate 3-D cervical spine kinematic instrumentation
 - Identify injurious kinematics
- **Choose appropriate injury criterion**
 - Assess efficacy of various ICs
