

Introduction

- Inland navigation, involving both freight and passenger transport, takes on great importance in many European countries, with prestigious waterways such as rivers Volga, Danube and Rhine
- There are organizations dealing with the development of technical-administrative regulations, such as the Commissions of the European Union (in Brussels), of the Danube (in Budapest), of the Rhine (in Strasbourg), of UNECE (in Geneva)
- The CEMT (The Confederation of European Maritime Technology Societies) has recently obtained the accreditation by UNECE and the Rhine Commission, charging then Atena of representing the organization. This won't just be an occasion of cultural enrichment, but it will also allow to its associates, public and private operators, a continuous update about the regulations in force

Freight Transport

Table 1 Freight transport in the selected UNECE countries (2007) (million t-km)

	Inland waterways freight	Road freight	Rail freight	Total inland freight

European Agreement on Main Inland Waterways of International Importance (AGN)

- Fifteen years after the adoption of the AGN, it is here described the state in 2011 of the AGN network in the six main subnetworks:
 - Rhine-Danube network (14,362 km or 47.6 % of the total length of the AGN network (30,177 km));
 - Azov-Black-Caspian seas basin (9,339 km or 30.9 %);
 - Baltic area (840 km or 2.8 %);
 - Czech-Slovak centered network (715 km or 2.4 %);
 - Rhône-Saône basin (679 km or 2.3 %);
 - Seine-Oise basin (632 km or 2.1 %); and
 - Costal routes and connected inland waterways (2,774 km or 9.2 %).

Western and central European region

- The transport volume of freight transported on inland waterways in the EU is around 526 million t (2012 figure). In Europe, far and away the largest volumes are accounted for by the Western European countries the Netherlands (332 mio. t), Germany (227 mio. t) and France (58 mio. t)
- Inland navigation in Belgium has made considerable gains in recent years. 190 million t were transported in 2013. The growth in the major seaports' (Antwerp, Ghent) hinterland traffic plays an important role in this
- Being an important commercial route for two centuries, the Elbe river has been connected with a system of navigable canals with rivers Rhine, Weser and Oder. The waterway itself is navigable with commercial boats within the European territory, even to Prague, whilst other systems of artificial canals link it to German's industrial areas and to Berlin. The Elbe-Lübeck canal connects the river to the Baltic sea, as the Kiel canal also does, the access to which is near Elbe's mouth.

The actual fleet in NL and in Western Europe

Table 3 The actual fleet in NL and in Western Europe.

Operational fleet									
Type of craft	NL	West European fleet							
Cargo vessels	3993	6753							
Barges	1135	3117							
Motor tankers	1240	1992							
Tank barges	51	155							
Tug/push boats	479	813							
Pushers	649	1221							
Passenger vessels	No up to date information								

Approx. 48% of the cargo which passes through the Port of Rotterdam (440.5 million tons in 2013) is transported to the hinterland by inland waterway transport.

The Rhine fleet

Table 4 Number of craft in the Rhine Fleet by year of build and size

31/12/2008	Number of craft in the Rhine fleet, by year of build and size

Danube Region

- Romania is in first place ahead of Bulgaria, but shows a modest decline since 2010, from an initial level of more than 30 mio. t to around 27 mio. t in 2012. The principal reason for this is the crisis in the steel industry
- The central Danube region (Hungary, Slovakia, Croatia) exhibits relatively stable volumes of between 5 and 10 mio. t per year
- Transportation in the upper Danube region as well (Austria, Slovakia) is broadly constant over time and is around 10 mio. t.

The Danube fleet

Table 5 Evolution of the total capacity of the Danube fleet by country between 1962 and 2005

The Rhine-Mein-Danube canal

- Since 1992, year of construction of the Rhine-Mein-Danube canal, it is possible to ship from Rotterdam over the North Sea, to Sulina on the Black Sea, going through the centre of Europe.
- The canal, located on the German territory and 171 km long (from Bamberg to Kelheim), links the Danube to the Mein, which then flows into in the Rhine. The waterway thus generated is overall long approximately 3500 km and goes through the Netherlands, Germany, Austria, Slovakia, Hungary, Croatia, Serbia, Bulgaria, Romania and Ukraine. It's well-travelled either by ships for freight transport or cruiser and pleasure boats.

Russian Federation

- Russian's system of Inland Waterways is 102,000 km long of which 48,000 km has a guaranteed depth but also has, unfortunately, a guaranteed closing period in winter. In European Russia, 72,000 km of waterways connect the Baltic Sea, White Sea, Black Sea, Caspian Sea and the Sea of Azov. Some 9,000 km of this network is open to deep-draught riversea shipping
- Cargo transportation (2014) 124.5 million tons
- Cargo turnover (2014) 74080.6 million t-km

The Russian Federation fleet

- The Russian River Register (RRR) had, as of the 1st of January 2013, 22,442 inland ships in class, including more than 1,000 river-sea navigation vessels, This fleet may further be broken down into:
- 1,505 passenger and passenger/cargo ships, 1,044 dry cargo vessels, 6744 tankers and 5,159 tugs
- 9,318 non-propelled vessels, including: 4,528 dry cargo barges and 793 tank barges
- In 2012, 149 newbuildings were constructed under technical supervision of RRR branch offices,

внутренние водные пути российской федерации

Other European countries

- In Great Britain in 2012 there was around 3.7 mio. t of "pure inland navigation traffic", the river-sea traffic exceeds the purely internal traffic volumes approximately eleven fold (40 mio. t in 2012)
- Poland possesses a large inland waterway network, unfortunately freight transport in recent years has suffered a significant decline. The most important reason is the substandard waterway infrastructure
- The Czech Republic exhibits a consistent transport volume on a multi-year comparison of around 1 mil. t annually
- Italy's waterway network is located exclusively in the north of the country, and comprises the Po river and various canals located around the Po, the annual volume is currently below 1 mil. t.

Passenger transport

Rhine – Danube basin

- Short line cruises (Passau-Vienna-Bratislava-Budapest): 368.000 passengers (2013)
- Long line cruises (Passau Danube Delta): 84.000 passengers
 (2013)
- Long line cruises (Amsterdam-Budapest): 840.000 passengers (2013)
- Daily trip:
- Vienna, Budapest, Passau: 1.200.000 passengers (2013)
- Other daily trip: no reliable data
- The Rhine passenger fleet: no reliable data
- The Danube passenger fleet consists (2014) of about 170 vessels with approximately 40.000 places for passengers.

Passenger transport

Italian waterways

- Big congestion is created by daily passenger ships traffic on the lakes in the north of the country and in the Venetian Lagoon; average datas (2013):
- Northern and central Lakes:
 - Passengers: 10 mil
 - Fleet:
 - 500 small ships (from 20 to 150 pax each)
 - 100 ships (from 150 to 1200 pax each)
- Venetian lagoon:
 - Passengers: 18 mil
 - Fleet:
 - 800 ships (from 10 to 150 pax each)
 - 200 ships (from 150 to 1200 pax each)

Passenger transport

- Russian rivers and canals
 - 12.7 million passengers transported in 2014
 - Passenger fleet: 1,505 ships
- Waterways of The Netherlands, Belgium and France
 - There is significant passenger traffic, overall being daily trips, but there's no availability of up to date information about fleet and number of passengers per year

INLAND NAVIGATION GOVERNANCE

In the majority of the European countries, the rules, procedures and surveyors all depend on Organizations, both public or recognized by Governments, strictly separated from maritime ones.

Countries members of European Union

- Rules in force: 2006/87/EC Directive of the European Parliament and of the Council of 12 December 2006 laying down technical requirements for inland waterway vessels
- Recognized Classification Bodies: Bureau Veritas, Rina, Germanischer Lloyd, Lloyd's Register of Shipping, Polski Rejestr Statków SA, Russian River Register

- Countries members of CCNR Central Commission for the Navigation of the Rhine (Germany, Belgium, France, the Netherlands, and Switzerland)
 - Rules in force: <u>The Rhine Vessel Inspection</u>
 <u>Regulations (RVIR)</u>
 - Recognized Classification Bodies: Det Norske Veritas,
 Bureau Veritas, Germanischer Lloyd, Lloyd's Register of Shipping

- Countries members of Danube Commission (Austria, Bulgaria, Hungary, Germany, Moldova, Russian Federation, Romania, Republik of Serbia, Slovak Republik, Ukraine, Republic of Croatia)
 - Rules in force: Recommendations on Technical Requirements for Inland Navigation Vessels. of the Danube Commission
 - Recognized Classification Bodies: DC has no list of recognized Classification Bodies, as this topic lies under national responsibility of our member states

Russian Federation

- Rules in force: Rules of Russian River Register
- Recognized Classification Bodies: RRR
 (Russian River Register), Rina

- Countries members of UNECE (Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Canada, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, The former Yugoslav Republic of Macedonia, Turkey, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America, Uzbekistan)
 - Resolution of the UNECE's Working Party on Inland Navigation:
 - Resolution No. 24 –CEVNI: European Code for Inland Waterways
 - Resolution No. 61 –Recommendations on Harmonized Europe-Wide Technical Requirements for Inland Navigation Vessels
 - Recognized Classification Bodies: UNECE has no list of recognized Classification Bodies as this topic lays under national responsibility of our member states

In 2006, an EC Directive laid down the technical requirements for inland waterway vessels (Directive 2006/87/EC of the European Parliament and of the Council of 12 December), and this introduced full harmonisation of the technical requirements for inland waterway vessels and Rhine regulatory provisions (with regard to category 3 of major waterways). On the basis of this equivalence, the CCNR has recognised the validity of Community certificates on the Rhine (Protocol 2007-II-21), while Rhine certificates have also been recognised on all EU waterways. In future, Rhine and EŬ regulations will evolve in tandem so as to remain identical
