

**Committee of Experts on the Transport of Dangerous Goods
and on the Globally Harmonized System of Classification
and Labelling of Chemicals****Sub-Committee of Experts on the Transport of Dangerous Goods**

20 June 2016

Forty-ninth session

Geneva, 27 June – 6 July 2016

Item 7 of the provisional agenda

**Global harmonization of transport of dangerous goods regulations
with the Model Regulations****Inconsistencies in the translation of the proper shipping
names in the Dangerous Goods List of the Model
Regulations and its related modal instruments****Note by the secretariat****Introduction**

1. The expert from Spain brought to the attention of the secretariat a number of inconsistencies between the Spanish translations of the proper shipping names in the Dangerous Goods List in the Model Regulations, the “International Maritime Dangerous Goods Code” (IMDG Code), the “European agreement concerning the international carriage of dangerous goods by road” (ADR) and the “Regulations concerning international carriage of dangerous goods by rail” (RID).

2. The secretariat shares the view of the expert from Spain that modal instruments should refrain, to the extent possible, to introduce changes to the proper shipping names given by the Model Regulations. Yet, the secretariat notes that it does not have either any control or authority on the translations performed by other entities such as IMO, ICAO or under the responsibility of the relevant governmental authorities, nor the capacity to perform a comparison analysis among all the transport instruments implementing the provisions of the Model Regulations, for all United Nations official languages, each time new or amended entries are introduced in the Dangerous Goods List.

3. It is worth noting however, that some of the inconsistencies identified could be easily minimized in the future if some guidance was given to ensure that proper shipping names are translated in a consistent manner irrespective of the language used.

4. Although the initial list provided by the expert from Spain only addressed the differences among the Spanish versions of the Model Regulations, RID, ADR and the IMDG Code, the secretariat considered that since the Spanish version was prepared on the basis of the English and French texts, the assessment should take into account the original proper shipping names in these two languages as well.

5. The differences concerning the Spanish versions of the ADR and RID were not taken into account, as these versions are prepared by the Spanish competent authority.

6. After a case-by-case study of the entries in the comparison list provided by the expert from Spain, the secretariat identified the following main sources of inconsistencies:

(a) Use of the symbol “†” in the Dangerous Goods List

In the Model Regulations the symbol “†” is used against entries for which additional information is given in Appendix B, as explained in paragraph 3.2.2 of the Model Regulations. In the IMDG Code, there is not an appendix B equivalent to that of the Model Regulations and therefore the symbol is not needed and the difference between both lists is justified.

(b) Minor editorial differences

Some differences exist in the Spanish versions for the text in lowercase for some entries containing quantifiers such “more than”, “not more than”, “less than”, “with not less than” etc. The terms used both in the Model Regulations and in the IMDG Code are perfectly equivalent and used consistently in both publications.

Considering that the text in lowercase is not part of the proper shipping name, that the meaning of the terms used is strictly the same and that the dangerous goods list is likely to be used in all types of transport of dangerous goods transport and safety-response databases all over the world, the secretariat considers that changing the names in the Model Regulations and/or in the IMDG Code only for stylistic considerations might not be justified from a cost-benefit point of view.

(c) Language used as the basis for translation into Spanish

The choice of the language used as the basis for translation into Spanish entails differences in the translation for some entries.

The secretariat notes that some of the differences in the Spanish proper shipping names detected between the Model Regulations and the IMDG Code were due to the fact that in one case the translation was based in the French text while in the other it was based on the English text.

This is case of the proper shipping names related to “mixtures”, where the structure varies depending on the linguistic version. For instance for UN No.1581, the elements of the proper shipping name in the Model Regulations (MR) follow a different order in the three linguistic versions, although their meaning remains unchanged:

“CHLOROPICRIN AND METHYL BROMIDE MIXTURE...”
(MR/IMDG Code)

“BROMURE DE MÉTHYLE ET CHLOROPICRINE EN MÉLANGE...”

“MEZCLA DE CLOROPICRINA Y BROMURO DE METILO...” (MR)

“CLOROPICRINA Y BROMURO DE METILO, EN MEZCLA...”
(IMDG Code)

The secretariat is of the opinion that, in order to facilitate the search of a specific entry in the alphabetical list, entries referring to mixtures should start with the name of the components, instead of with the word “mixture”. This is the case in the English version. For the French version, the words “en mélange” would be added following the components. Similarly, it is suggested that in the Spanish version, the words “en mezcla” follow the components, instead of starting the proper shipping name with “MEZCLA DE...”.

Other differences (e.g. order of the elements of the proper shipping name; choice of synonyms, etc) have also been detected depending on the language used as the basis for translation.

(d) Choice of synonyms

Synonyms may vary depending on the language used. In the Dangerous Goods List, synonyms may appear for the three languages, or only for one or two of them.

For instance, for UN No.2785 “4-THIAPENTANAL”, the proper shipping name in French includes: “4-THIAPENTANAL” and “(MÉTHYLTHIO-3 PROPANAL)”. For the text between brackets, no translation is provided in English or in Spanish. Does this mean that an equivalent synonym is not available in English and in Spanish?.

Also, in some cases, the synonym used for the same language in the Model Regulations and in the IMDG Code differs, for instance:

UN No. 2045 “ISOBUTYRALDEHYDE (ISOBUTYL ALDEHYDE)”

FR (MR and IMDG Code):

“ISOBUTYRALDÉHYDE (ALDÉHYDE ISOBUTYRIQUE)”

SP:

“ISOBUTIRALDEHIDO (ALDEHIDO ISOBUTÍRICO)” (MR)

“ALDEHÍDO ISOBUTÍLICO (ISOBUTIRALDEHÍDO)” (IMDG Code)

(e) Nomenclature

There is no guidance on the most appropriate nomenclature to be used as the proper shipping name. Logically it should be the most commonly used in practice but in the absence of any specific guidance, some entries are given different names although assigned to the same UN number. This is the case for instance, for UN No.1709 “2,4-TOLUYLENEDIAMINE, SOLID”, the proper shipping names in French and Spanish differ in the Model Regulations and the IMDG Code, as follows:

FR:

“m-TOLUYLÈNEDIAMINE, SOLIDE” (MR)

“2,4-TOLUYLÈNEDIAMINE, SOLIDE” (IMDG)

SP:

“TOLUILEN-2,4-DIAMINA SÓLIDA” (MR);

“2,4-TOLUILENDIAMINA SÓLIDA” (IMDG)

(f) Different use of commas and parenthesis to separate the different components of the proper shipping name

There is no established guidance and therefore different combinations are found for the same entry. For instance:

UN No.1811

EN:

“POTASSIUM HYDROGEN DIFLUORIDE SOLID” (MR)

“POTASSIUM HYDROGEN DIFLUORIDE, SOLID” (IMDG Code)

FR (MR and IMDG Code):

“HYDROGÉNODIFLUORURE DE POTASSIUM, SOLIDE”

SP:

“HIDROGENODIFLUORURO DE POTASIO, SÓLIDO” (MR)

“HIDROGENODIFLUORURO DE POTASIO SÓLIDO” (IMDG Code)

UN No. 1754 “CHLOROSULPHONIC ACID (with or without sulphur trioxide)”

FR (MR and IMDG Code):

“ACIDE CHLOROSULFONIQUE contenant ou non du trioxyde de soufre”

SP:

“ÁCIDO CLOROSULFÓNICO (con o sin trióxido de azufre)” (MR)

“ÁCIDO CLOROSULFÓNICO, con o sin trióxido de azufre” (IMDG Code)

(g) Order of the components of the proper shipping name

There is no established guidance on the precedence of the components of the proper shipping name (e.g: should they follow the order of the English version?) and therefore different combinations are found for the same entry. For instance:

UN No. 3188 “SELF-HEATING LIQUID, CORROSIVE, INORGANIC, N.O.S.”

FR (MR and IMDG Code):

“LIQUIDE INORGANIQUE AUTO-ÉCHAUFFANT, CORROSIF, N.S.A.”

SP:

“LÍQUIDO QUE EXPERIMENTA CALENTAMIENTO ESPONTÁNEO, CORROSIVO, INORGÁNICO, N.E.P” (MR)

“LÍQUIDO INORGÁNICO QUE EXPERIMENTA CALENTAMIENTO ESPONTÁNEO, CORROSIVO, N.E.P.” (IMDG Code)

(h) Vocabulary and spelling

In the Spanish version, some of the English terms have been translated differently in the Model Regulations and in the IMDG Code.

For instance, as regards differences in vocabulary:

- For the English term “burster” (in French “charge de dispersion”), the Spanish version of the Model Regulation uses “carga dispersora” while the IMDG Code uses “carga iniciadora”; or
- For the English “CARTRIDGES, BLANK” (in French “CARTOUCHES À BLANC”) the Spanish version of the Model Regulations uses “CARTUCHOS SIN BALA” while the IMDG Code uses “CARTUCHOS DE FOGUEO”

In some cases the differences are in the text in upper case (i.e. they are part of the proper shipping name) while in other cases they appear in the explanatory text in lower case.

Minor spelling differences have also been detected (e.g.: “hidrazina” or “hidracina”)

The secretariat is of the opinion that the text in upper case should be identical in all cases. Expert opinion is needed to identify the most suitable term in each case.

Nevertheless, the Sub-Committee may consider whether a general recommendation to respect the translation of the Dangerous Goods Lists in the Model Regulations when transposing it into the international modal instruments or national legislation is needed.

(i) Use of singular or plural

There are some inconsistencies in the use of singular and plural in the different linguistic versions of the same entry.

For instance, for UN No.1390 “ALKALI METAL AMIDES” (MR and IMDG Code)

FR:

“AMIDURES DE MÉTAUX ALCALINS” (MR)

“AMIDURE DE MÉTAUX ALCALINS” (IMDG Code)

SP:

“AMIDAS DE METALES ALCALINOS” (MR);

“AMIDA DE METALES ALCALINOS” (IMDG)

(j) Possible mistakes in the Model Regulations and/or the IMDG Code

Some of the inconsistencies seem to be due to translation or typographic mistakes. The annex to this document contains the correction proposed by the secretariat for a number of entries (see annexes).

Action requested from the Sub-Committee

7. The secretariat has compiled in the following annexes all the inconsistencies found during the comparison exercise together with its recommendations and the actions requested from the Sub-Committee.

8. Spanish speaking experts from the Sub-Committee are invited to work together and communicate to the secretariat their decisions and recommendations to solve current inconsistencies in the Spanish versions as well as on how to minimise them in the future.

9. Other experts are also invited to consider whether further guidance is needed as regards translation of the proper shipping names that would minimise the risk of introducing new inconsistencies in the translation in the future (e.g.: guidance on the order of the elements of the proper shipping name, use of commas to separate the different elements of the proper shipping name, use of synonyms, etc).

10. Based on the feedback received, the secretariat may consider preparing a document with a list of amendments and/or corrections, as applicable, to be taken into account for the preparation of the next revised edition of the Model Regulations.

11. The Sub-Committee is invited to consider the recommendations and actions listed in the annex to this document, which has been divided into several parts as follows:

- Part 1: Quantifiers (page 7)
- Part 2: Entries for mixtures, alloys, amalgams, emulsions, dispersions, compounds, complex and preparations (page 11)
- Part 3: Use of synonyms (page 18)
- Part 4: Vocabulary and spelling (Spanish version only) (page 25)

- Part 5: Nomenclature (page 50)
- Part 6: Order of the elements of the proper shipping name (page 63)
- Part 7: Use of singular and plural (page 70)
- Part 8: Use of commas to separate the different elements of the proper shipping name (page 72)
- Part 9: Proposed corrections to the Model Regulations (page 92)
- Part 10: Proposed corrections to the IMDG Code¹ (page 98)

¹ The secretariat will communicate this corrections to the Spanish Section of IMO's translation services for consideration.

In the Model Regulations, replace “MEZCLAS DE TRINITROTOLUENO (TNT) CON TRINITROBENCENO Y HEXANITROESTILBENO” with “TRINITROTOLUENO (TNT) EN MEZCLAS QUE CONTIENEN TRINITROBENCENO Y HEXANITROESTILBENO”

Comments by the secretariat

The secretariat notes that in the Spanish version of the IMDG Code the text between brackets in the English and French versions “(ARTICLES, EEI)” has not been translated into Spanish.

Recommended action: harmonise all translations, i.e.:

- (a) MR: No action required
- (b) IMDG Code: For UN 0486, consider replacing “SUMAMENTE” with “EXTREMADAMENTE” and insert “(OBJETOS EEI)” at the end of the current proper shipping name

Recommended action:

Decide whether the proper shipping name in the Spanish version, should be amended to follow the same structure of the English proper shipping name: i.e. names always starting with the substance(s) addressed instead of with the work “Emulsión...”, i.e:

In the Model Regulations, consider amending the proper shipping name in the Spanish version to read: “NITRATO DE AMONIO EN EMULSIÓN o SUSPENSIÓN o GEL, explosivos intermedios para voladuras”

“METALES ALCALINOS, DISPERSIÓN DE, o METALES ALCALINOTÉRREOS, DISPERSIÓN DE” (MR);

“DISPERSIÓN DE METALES ALCALINOS o DISPERSIÓN DE METALES ALCALINOTÉRREOS” (IMDG)

Comment by the secretariat

The secretariat notes that for UN 3482, there is no difference between the Model Regulations and the IMDG Code:

EN (MR+IMDG Code): “ALKALI METAL DISPERSION, FLAMMABLE or ALKALINE EARTH METAL DISPERSION, FLAMMABLE”

FR (MR+IMDG Code): “DISPERSION DE MÉTAUX ALCALINS, INFLAMMABLE ou DISPERSION DE MÉTAUX ALCALINO - TERREUX, INFLAMMABLE”

SP (MR+IMDG Code): “DISPERSIÓN DE METALES ALCALINOS, INFLAMABLE o DISPERSIÓN DE METALES ALCALINOTÉRREOS, INFLAMABLE”

Recommended action:

Consider harmonizing both entries (UN 1391 and 3482)

Compound (“...COMPOUND...”)

Consider whether the proper shipping name in the Spanish version, should be amended to follow the same structure of the English proper shipping name: i.e. names always starting with the substance(s) addressed instead of with the work “COMPUESTO...”

Only the entries for which a difference exists in the Model Regulations and in the IMDG Code have been listed below.

Comments by the secretariat

The secretariat notes that the term “boosters” also appears in the proper shipping name of UN Nos. 0225, 0268 and 0283 where it has been translated as “PETARDOS” in the MR and as “CARGAS” in the IMDG Code, without indication of any synonym.

Both terms are equivalent, equally valid and used consistently in all entries both in the MR and the IMDG Code. They are not part of the proper shipping name (i.e. they appear in lowercase). Experts may wish to consider whether the change just for the sake of harmonisation without evidence of problems with the current names is justified.

FR (MR+IMDG Code): “navires”

SP: “barcos” (MR) ; “buques” (IMDG)

Comments by the secretariat

The secretariat notes that in the MR there is no definition for ship. There is a definition for vessel with the corresponding terms “bateau” in French and “buque” in Spanish.

However, the translation of “ship/vessel” is not always consistent in the MR. “Ship” is translated as “barco” in the DGL but as “buque” in 4.3.1.15 (g), 5.4.3, 6.7.4.1, 7.1.3.3.1 (b), 7.1.7.1.1, 7.1.7.1.2, 7.1.7.2.3.

The French version is not consistent either since it uses the term “navire” for “ship” in 4.3.1.15 (g), 5.4.3 (c), 6.7.4.1, 7.1.3.3.1 (b), 7.1.7.1.1, 7.1.7.1.2. But also for vessel in 5.1.5.1.2 (c) and (d), the dangerous goods multimodal transport document.

It is also noted that in the IMDG Code, both “ship” and “vessel” are translated as “buque” in Spanish.

Recommended action:

- Decide on the term to be used “OLEAGINOSA” or “DE SEMILLAS” for both UN Nos.
- For UN 1386 (text in lowercase): Clarify whether the texts should be the same in the Model Regulations and the IMDG Code, or whether the differences are justified and the text in lowercase shall remain unchanged.

UN No. 1511 Translation of “HYDROGEN PEROXIDE”

UN No. 1511 “UREA HYDROGEN PEROXIDE”

FR (MR+IMDG Code): “URÉE-PEROXYDE D'HYDROGÈNE”

SP:

Therefore, it is recommended to amend the entry for UN No.1511 accordingly.

Recommended action:

In the Spanish version of the Model Regulations, for UN No.1511, replace “AGUA OXIGENADA” with “PERÓXIDO DE HIDRÓGENO”.

Comments by the secretariat

The secretariat notes that the term “cebado” (“initiating”) is used in other parts of the Model Regulations. If the decision is to use the term “iniciación”, the texts in the Model Regulations and the Manual of Tests and Criteria may need to be modified accordingly.

Recommended action:

Decide on the term to be used “dispositivo de cebado” or “dispositivo de iniciación”

Recommended action: None

Both terms (“Con un líquido inflamable” or “con líquido inflammable”) are equivalent. They are not part of the proper shipping name (i.e. they appear in lowercase). Experts may consider whether the editorial change just for the sake of harmonisation without evidence of problems with the current names is justified.

Comments by the secretariat

The secretariat notes that for UN 2797, “battery” has been translated in Spanish as “ACUMULADORES” in the Model Regulations and as “BATERÍAS” in the IMDG Code. However, for UN 2796 the same term has been translated as “BATERÍAS” both in the Model Regulations and in the IMDG Code.

“...QUE REACCIONAN ESPONTÁNEAMENTE....” (IMDG)

Comments by the secretariat

Both terms are equivalent. The dangerous goods list in the Model Regulations consistently uses “de reacción espontánea” while the IMDG Code uses “que reacciona espontáneamente”. However, both terms are used interchangeably in the Model Regulations (e.g. chapters 1.1, 2.0, 2.4, diagrams) and in the Manual of Tests and Criteria.

Recommended action:

Experts are invited to consider whether there is a need to harmonise the entries in the Model Regulations and in the IMDG Code. If so, please advise on the term to be used.

Comment by the secretariat

The secretariat notes that for UN Nos. 1725 (Aluminium bromide, anhydrous), 1726 (Aluminium chloride, anhydrous), 2580 (Aluminium bromide solution) and 2581 (Aluminium chloride, solution), “aluminium” has been translated both in the Model Regulations and the IMDG Code as “de aluminio” (instead of “alumínico”).

Only for UN No. 2715 (aluminium resinate), the translation reads “alumínico”.

Experts may consider providing advice on the term to be used for all entries.
