Airport Sector - 
At a Glance

Main Activities

- Handling passengers and freight
- Provision and maintenance of airport infrastructure
- Services: Provision – airport security, fire fighting, cleaning and maintenance
- Allocation of space between airlines and commercial concessionaires
- Handling agents, Control Authorities, Other services -- retailing, catering, banking, car hire

Commercial Activities

- Handling Passengers
- Freight
- Retail
- Car Park
- Real-estate

Non - Commercial Activities

Airport Revenues

- Airport charges
- Take-off or landing charges
- Apron or parking charges
- Passenger handing charges by airlines
- Delay in take-off or landing charges
- Commercial revenue
- Duty free sales
- Catering
- Car Park
- Rentals from other retail outlets
- Advertisement
- •Hotel and lounges
## Airport Sector
### The Revolutionary Change

#### Before
- Domain of traditional Airlines practice of charging high prices
- Relatively low mobility from passengers
- Prevalence of Europe and the U.S. as the dominant sector locations
- Field of hubs over the local / regional airports with weak expression
- Airports focused almost exclusively on the development of business aviation - rates as the main source of revenue.

- Low diversification of business
- Low bargaining power of Airlines
- Rigid Offer

#### Nowadlys
- Strong growth of Low-Cost Airlines with discounted rates - *Low Cost Carriers* and the Premium Services
- Sustained increase in air passenger traffic and cargo
- Emergence of new relevant locations in the sector as Asia and Latin America
- Increased use of regional / local airports for Low-Cost Airlines
- Airports aim to develop complementary business to its core business

- High competitive pressure on airlines
- Effort to diversify non-aviation business
- Increase the bargaining power of companies
Increasing Trend

International passengers increases are stagnant -- from 952 Mio. in 2009 to 1.264 bn. passengers in 2014

Growth

313 Mio. traveler increase reflects a compound annual growth rate of 5.9%

Increasing Traffic

Fastest growing market for International passengers:
China (10.8%), UAE (10.2%), Vietnam (10.2%), Malaysia (10.1%) and Sri Lanka (9.5%)
In 2012, strong economic growth in emerging markets resulted in expansion of passenger traffic and greater aviation connectivity. Despite of hike in fuel prices, the high volume in the passenger market led to high profitability in airline industry than it was expected.

However, due to shrinking markets, falling utilization and lower yields, the freight business suffered a second year of shrinking market.
Passenger Share Worldwide

Total Passenger Market Share (Revenue Passenger Kms)
- Europe
- Asia Pacific
- North America
- Middle East
- Latin America
- Africa

Total Freight Market Share (Freight Tonne Kms)
- Europe
- Asia Pacific
- North America
- Middle East

### % Change in Freight

- Middle East: 10.0%
- N. America: -5.0%
Asia-Pacific passenger traffic is forecast to grow at 5.7% CAGR. Traffic within the Asia-Pacific region will represent 31.7% of global passengers in 2017, up from 28.2% in 2012. North America and Europe will continue to see their share decline, from 26%, and 24%, respectively, to 24% and 23%.

The Middle East will report the strongest international passenger growth with 6.3% CAGR.

Europe will see international passenger demand growth of 3.9% CAGR.

North America will record the slowest international passenger demand growth—3.6% CAGR.

Latin America will see international passenger demand grow 4.5% CAGR.
Regional Outlook

**ASIA PACIFIC**

Asia Pacific’s international passenger expected to grow by 5.7% CAGR by 2016

In 2014, China, Japan and Hong Kong reported to be the biggest hub of international passenger market in this region, where China dominating the international as well as domestic passenger market.

The region will see the highest growth rate for international fright at 9.8% with Hong Kong, Japan, China, South Korea and Chinese Taipei comprises the region top give markets.

**MIDDLE-EAST**

The Middle East is expected to have the fastest growth rate 6.3% CAGR.

The UAE, Kuwait, Jordan will be among the top 10 fastest growing countries, with the UAE ranked 7th for international passengers at 82.3 million.

International freight demand will grow 8.1% as freight links to and via the region continue to develop. The UAE will lead the region, handling 2.7 million tones of cargo.
Regional Outlook

EUROPE

Europe: International passenger demand growth of 3.9%.

The United Kingdom, Germany, Spain, France and Italy will remain among the top ten international passenger markets.

International freight demand will grow 6.5%, with Germany, the UK and the Netherlands leading the region.

Russian Federation: Fastest growth rate of 11%

AMERICA

Latin America will see international passenger demand grow by 4.5%. International freight demand will increase 6.4%, with Peru leading the region freight growth at 9%.

North America will grow 3.6% for international passenger demand and 7.6% for international freight.

The US will continue to be the largest international and domestic passenger market in the world, and is expected to remain the largest international freight market by some margin.

In 2013, the airport in Belarus served more than 2.2 million passengers (20% more than in 2012) and almost 10,56,000 tons of cargo and mail (an increase of 7.4%). Currently, there are 7 main airports in Belarus, all airports are equipped with certified systems of radio and lighting equipment airports and airfields are certified in accordance with ICAO requirements.
Activities in an Airport

Adapting Offer to Airport Demand
Expansion of infrastructure to meet the needs for greater capacity, increased uptake of traffic and tourism development in the region, exploration of strategic positioning for new routes, etc.

Airport Marketing
Philosophy of Client Oriented management - airlines - and extension of the marketing function in service to passengers, with the development of several initiatives in both areas, with positive impact on Client loyalty.

Pricing Policy
Focused on cost recovery and competitiveness of the rates charged.

Promotion of increased traffic
Increased number of destinations served by airports and sustain the increase in air traffic at airports.

</table>
Activities in an Airport

Others

Handling

Sustained growth of the business. Increased productivity through efficiency gains managing people. Distinction under the Environmental Certification

Security Assistance to Passengers with Reduced Mobility

High level of compliance with safety standards. Development of MyWay service assistance to persons with reduced mobility

International Business

Moderate strategy of internationalization with aviation and non aviation services, based on experience ANA, within various markets (Eg: Brazil, China, Middle East, ...)
Private sector has continued to be essential for development of airport infrastructure worldwide.

Private sector participation can be found in different countries around the world.

According to the 2012 ACI report, 450 airports had some form of private sector participation.

The most common being concessions (251 airports), followed by outright ownership (152 airports) and management contracts (47 airports).

Amongst those 25 are listed on stock exchanges, of which five are Chinese, three Mexican and two from Southeast Asia.
Key Challenges for a PPP Setup

- Extracting long-term value for money through risk transfer
- Improving efficiency and competitiveness
- Ensuring transfer of skills
- Supplementing limited public sector capacities
- Providing Financial Support

"Axis Consulting
The Cross Sector Advisory"
Challenges and Risks

High Development, bidding and ongoing costs
Does the benefit of a PPP model outweigh costs?

Higher return expectations
Need for sufficient commercialization potential to incentivize private sector

Financing challenges
Ensuring the ability to finance the project, especially under uncertain demand through adequate supporting clauses
Challenges and Risks

**Political and social challenges**
Perceptions on various issues including tariff increases, perceived loss of control, land procurement and job losses

**Incomplete transfer of performance risks**
Even if the government has minimal stake in the project, public will continue to hold the government responsible

**Unanticipated events in the long run**
Re-negotiation of contract terms may ensue during the project implementation to factor in unanticipated externalities
Conditions Precedent to a Successful PPP

Macro Factors

Political stability

Favorable policy environment

Effective legislative, legal and controls framework

Internal government expertise in PPPs

Need for strong sponsor units

Robust project prioritization and preparation

Standardization of agreements and track record for sanctity of contracts

Project-Specific Factors

Adequate scope and complexity of the project

Sufficient demand and commercialization potential

Demonstrable social and economic benefits

Measurable output indicators

Framework to ensure adequate competition for the project

Clearly defined value addition for government
Size - A factor for PPP Contract

Relatively larger airports can be commercialized

Higher volumes and typically more predictable growth pattern leading to lower risk profiles

Greater ability for private sector to finance the project purely on the basis of revenues and concession contracts

Larger potential for non-traffic revenues, leading to off-airport development

Relatively smaller airports present challenges for commercialized

Uncertainty in pace of growth (leading to high demand risk)

Less attractive to investors and need for substantial concessions and grants

Lower potential for commercialization inside the fence

Minimal scope for non-traffic revenues, and limited scope to operations within airport premises, possibly restricting investor classes
