

It is a great pleasure for me to give some remarks about the document.

The document aptly captures and justifies the need for the endorsement and adoption of nuclear energy as a viable option in the energy mix.

It is environmentally compliant. The inability of countries to attain an adequate level of power generation, transmission and distribution has been a hindrance to development. Nuclear energy will enhance the achievement of growth as well as the recovery of most of the ailing economies in the world.

Apart from energy production, the mapping with the Sustainable Development Goals of the United Nations is also well defined. It has a linkage with almost all the goals and will be germane to their attainment. All the appropriate steps to be followed by nations with the intention to have nuclear energy are also very explicit, as documented in the 19 milestones.

The UNFC code will be very useful in defining the three dimensions (economic, social and technical) of Nuclear Energy Resources will therefore not be out of place.

I wish to submit that the document can be used as it is without any modification. However, there are some minor identified typographic errors which can be corrected using the Word document dictionary.
