

SOCIAL AND ENVIRONMENTAL CONSIDERATIONS WORKING GROUP

Dr. David Elliott

SOCIAL AND ENVIRONMENTAL CONSIDERATIONS TASK FORCE (SECTF) 2014 - 2018

- SECTF Terms of Reference: address social and environmental considerations “at a high level”
 - Essentially completed, issues remain
- Draft reports, culminating in the 2018:
 - Guidance report
 - Supplementary report on Concepts and Terminology
- Recommendations incorporated in the draft update of the UNFC

TASK FORCE/WORKING GROUP MEMBERS

Campbell, Kathryn A.	Sullivan & Cromwell	UK
Claudeville, Julio	Barrick	
Dennis Amos MWALONGO	AEC	Tanzania
Dr. HG Chong		Malaysia
Jenni, Karen	USGS	USA
Julian Hilton	Aleff Group	UK
Luis López	CNEA	Argentina
Luis Martins		Portugal
Magnus, Sarah	Deloitte	South Africa
Michael Lynch-Bell		UK
Rodrigo Chanes-Vicente	EEC	
Sigurd Heiberg	Petronavitas	Norway
Thomas Schneider	Ryerson U	Canada
Yang Hua	PetroChina	China
Claudio Virues	AER	Canada
	Colorado School of	
Carrie McClelland	Mines	Canada

Also an Associate Committee

SOCIAL AND ENVIRONMENTAL CONSIDERATIONS WORKING GROUP

- ▶ Task Force converted to a Working Group (SECWG).
- ▶ Draft Terms of Reference
 - ▶ Continue to develop high level general guidance
 - ▶ Work with Resource specific work groups on resource specific guidance
 - ▶ Determine any changes needed in guidance due to incorporating, in the UNFC:
 - ▶ Resource management
 - ▶ The SDGs and Paris Climate Change Accord
 - ▶ Integrate the work of the SECWG with:
 - ▶ E-axis economic, the F and G-axes.

SECWG 2019: CASE STUDIES

- ▶ Case studies needed, following which the current guidance can be reviewed and revised as appropriate.
- ▶ Few case studies at present.
 - ▶ Pilot project for the classification of **Mexico's petroleum resources** and reserves based on the United Nations Framework Classification for Resources (UNFC ECE/ENERGY/GE.3/2019/5)
 - ▶ Table 1 E axis evaluation matrix
 - ▶ Table 2 E axis evaluation, case study
 - ▶ Specifications for the application of the United Nations Framework Classification for Fossil Energy and Mineral Reserves and Resources 2009 (UNFC-2009) to **Geothermal Energy Resources**
 - ▶ Annex II Decision tree to aid the classification of geothermal projects according to UNFC-2009
 - ▶ Australian example (origin unknown)

SECWGW: HIGH LEVEL GUIDANCE

- The 2018 report is a proposal for high level guidance.
 - Not formulated as a traditional guidance document.
- Need to:
 - Reformulate as a more conventionally structured guidance document, avoiding overlap with the UNFC.
 - Continue to develop guidance
 - Structure it to integrate with resource specific guidance as this is prepared (and vice versa)

SECWG: IMPLICATIONS OF USING THE UNFC WITH THE SDGS AND CLIMATE ACCORDS?

- SDGs heavily weighted to social and environmental issues.
- Provide guidance for the use of the SDGs for UNFC classification
- But SDGs are:
 - Poorly constructed to provide clear decision rules for classification.
 - Dependency issues.

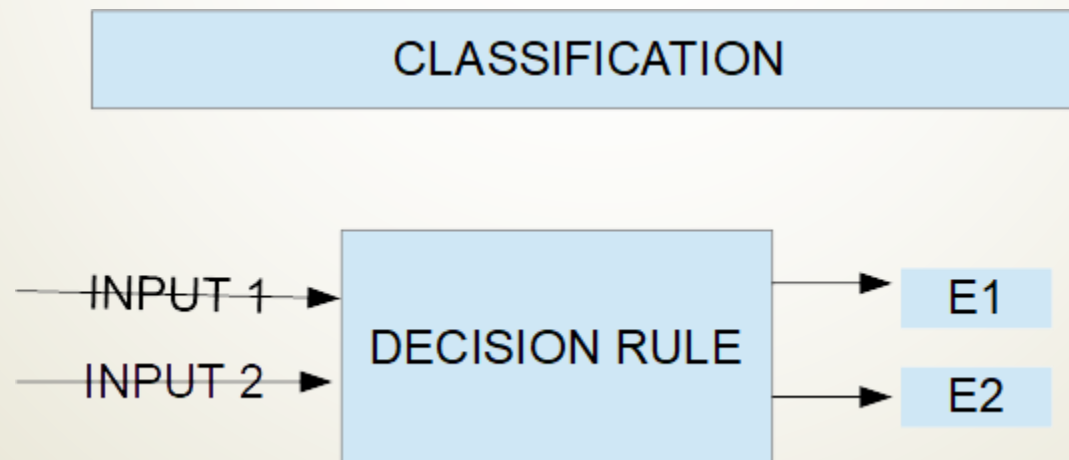

SECWG: A DILEMMA?

- What **is** done? Preface*: “Establishing a complete picture of current and future supply ...”
- What **should** be done? Introduction*: implies that SDG goals should factor into UNFC classification.
 - Different scenarios. E.g., with and without consideration of CO₂ production
- Will give different answers.
- Doing both can be informative.

* UNFC 2018 update draft

CLASSIFICATION NEEDS DECISION RULES

- ▶ Decision rules are an explicit or implicit assessment of whether an event will occur or not.
- ▶ They may be quantitative or qualitative, e.g.:
 - ▶ There is a 70% probability that the well will be successful
 - ▶ The well is likely to be successful

DECISION RULES

- “Traditional” method: relative frequency (e.g. tossing a coin, dice, etc.)
- “Subjective or Personal” method: “a degree of belief in a proposition”
- Social and environmental assessments are largely based on subjective judgments expressed in words, not numbers.
- Do we need guidance?

QUANTIFYING QUALITATIVE ASSESSMENTS

- ▶ Studies have shown median probabilities and Interquartile ranges (IQR) associated with words,

e.g.:

	Median	IQR	
▶ Very likely	88%	10%	
▶ Likely	71%	15%	
▶ Unlikely	17%	13%	
▶ Possible	39%	43%	Useless!

HOW TO ESTABLISH SUBJECTIVE OR PERSONAL PROBABILITIES?

- Techniques range through:
 - “Back of the envelope”
 - Individual or committee
 - Delphi process; “a systematic, interactive forecasting method which relies on a panel of experts”

REPORTING: USEABLE INFORMATION

- Social and environmental TF work emphasised the increased complexity of resource management decisions
- Decision makers need useable and complete information
 - UNFC Class and sub-class alone are not adequate
 - Sub-classes (e.g., Development on hold) tell what the status **is**, but not what **needs** to be done
- UNFC has 50 boxes – too complex for decision makers

A SUMMARY REPORT?

- ▶ Information on the conditions and the results of assessment :
 - ▶ E.g., Development plan, recovery technology, price, regulatory and fiscal regimes, value (NPV), social and environmental conditions, etc.
- ▶ **What contingencies must be resolved to provide a resource to users?**
- ▶ Information not too:
 - ▶ Simple – i.e., only the UNFC Class and sub-class
 - ▶ Complex – i.e., A full resource report
- ▶ Aggregated UNFC boxes - simpler “super” classes.
- ▶ Bridge to local usage terminology

IN SUMMARY

- Current document provides high level guidance
- Need SECWG TOR
- Need case studies
- Further development is needed of:
 - High level guidance
 - Resource specific guidance
- How to accommodate:
 - Expansion from resource classification to management
 - SDGs and Paris Climate Accords as classification factors
- Reporting to decision makers
