

Cambodia SDG 6.5.2 Report 2020: Challenges & Opportunities

ASIA ONLINE REGIONAL WORKSHOP SUPPORTING THE
MONITORING AND IMPLEMENTATION OF THE SDGs

TRANSBOUNDARY WATER COOPERATION
SDG 6 Indicator 6.5.2

17 September 2020

maksolieng@gmail.com

Monitoring & reporting approach

Answering was initiated by technical experts in IWRM-based Basin Development Strategy and MRC Procedures from CambodiaWP, then it was submitted to the Senior Management of the Cambodia National Mekong Committee for review. → After the first round monitoring and reporting, the technical experts go through it again to incorporate comments and suggestions from the CNMC Management, then returned back to them again for the 2nd review. → The technical experts make the last review and clean up for final draft and returned it back to the CNMC Management for final review. → Finally, the Final draft was prepared to be approved by the CNMC Chair and then submitted to the UNECE.

**Report on
Transboundary Water Cooperation
implementation in Cambodia
(Indicator SDG 6.5.2)**

Prepared by
Cambodia National Mekong Committee
in cooperation with
Cambodia Water Partnership

Phnom Penh, Cambodia

30 June 2020

**Reporting on global SDG indicator 6.5.2
TEMPLATE of the second cycle for reporting**

Content of the template

The template is divided into four parts:

- Section I Calculation of SDG indicator 6.5.2
- Section II Information on each transboundary basin or group of basins
- Section III General information on transboundary water management at the national level
- Section IV Final questions

Country name: [[CAMBODIA](#)]

Challenges

1. Answer to questions under the four sections require person(s) who are knowledgeable on the MRC and its Basin with long experience working in IWRM & TB-based Water Cooperation.
2. It is also important to have clear understanding of the questions, and the linkages between questions under the four different sections.
3. This is monitoring of a TBWC process to inform implementation of the next 10 years to achieve goal in 2030.

Opportunities

1. Answering to these questions enabled me to learn and reflect on the overall picture & process of TBWC in the Mekong Region, the process that frames the present situation, and what/how have been the outcomes of TBWC implementation in Cambodia.
2. The report informs Cambodia to step back to reflect on lessons learnt after 60 years TBWC, identify the issues and define the country framework and actions for improving the future TBWC implementation for optimizing sustainable water resources development and manage the TB impacts from upstream development.
