Transboundary Water Cooperation of Mongolia with Russia and China

Ts. BADRAKH
Director of Government Agency-Water Authority, Mongolia

Dr. D. DORJSUREN
Secretary General, National Water Committee, Mongolia

ALMATY, October 13-15, 2010
Total water resource: 608.29 km³, of which:
- Rivers: 34.6 km³
- Lakes: 500 km³
- Permanent frost, glacier: 62.9 km³
- Underground water: 10.79 km³

Resources of potential consumption: 15.75 km³, of which:
- Surface water resource: 4.96 km³
- Underground water resource: 10.797 km³
Mongolia has 5121 rivers, 9340 streams and creeks, 3732 lakes and 262 glaciers in total.

Steppe and desert zone covers 76.6% of the territory and there are do not have permanent-flown rivers or streams.

Total inferred ground water source is estimated at 10.79 km³/year.

Detailed Hydrogeological Survey carried out on 140 groundwater accumulation basins and Estimated available Ground Water resources.
Climate change and water scarcity tendency

In the last 60 years, the average yearly temperature has warmed by 1.9°C, while the annual precipitation has fallen down by about 10%.

In the first half of 21st century, the accrued vaporization level tends to exceed by 6-10 times over the precipitation growth. Dynamics of temperature and precipitation changes differ depending on location across regions.
Water Scarcity today in Mongolia

Water statistics of 2007 shows follows:

887 rivers, 2096 Springs and 1166 lakes are dried out last ten years. It means 33-38% of surface water resources of Mongolia has shortened.

30% of Glaciers of Altai Mountain reduced or melted during above mentioned period.
Main Water Basin in Mongolia

There are three Main Water Basins of Asia located in the Mongolian Territory as Arctic Ocean (to Russia), Pacific Ocean (to Russia and China) Central Asian Land Locked Basins. It shows Transboundary Water Issue of Mongolia, Russia and China.
Arctic Ocean Basin (or Selenge River Basin) covered roughly 280 000 km² (about 18% of territory). The area covered Arkhangai, Bulgan, Orkhon, Ovorkhangai, Khovsgol, Darkhan-Uul, Selenge, Tuv and Ulaanbaatar.
Tendency of Temperature in the Northern Part of Mongolia (Selenge River Basin) during 1982-2007гг

\[ y = 0.0484x + 1.2087 \]

\[ R^2 = 0.1789 \]
Tendency of Precipitation in the Northern Part of Mongolia (Selenge River Basin) during 1982-2007гг

\[ y = -2.365x + 310.24 \]

\[ R^2 = 0.0507 \]
Flora or Plants in the Selenge River Basin (by P.D. Gunin, 2007)

Selenge River Parameters

- Total watershed area 425245 \( \text{km}^2 \) and of which 282050 \( \text{km}^2 \) or 66% falls in Mongolia Territory.

- The length of Selenge up to Mongolia-Russia Border reaches 593 km.

- Width of valley varies 2-25 km there is low meandering in the narrow sections.

- Some area makes wide valley with several streams

- During low runoff period, width of river reduced to 50-150 \( \text{m} \).
Selenge River Parameters

- The average depth of water is 1.0-1.5 m, and max 4-5 m, min 0.5 m in some sections.

- Flow speed during low runoff period reaches 1 m/sec, in some sections 2.0-2.5 m/sec.

- The average discharge reaches of Selenge River 290 m$^3$/sec on the Border Section.

**Shishkhed River**

- The river starts from Guna river located in Ulaan Taiga Mountain of Hubsugul Province.

- Shishkhed River flows 296 km and joined to the upper Yenisei Tributary River.

- Watershed area in Mongolia reaches 20,605 km², average runoff 16.0 m³/sec.

SHISHKHED RIVER BASIN
Transboundary Water Cooperation with Russia

- The Mongolia and Russia Government have signed Agreement of Transboundary Water on February 15, 1995.

- Within this Agreement regulates following Transboundary Waters as Selenge, Kiran, Minj, Onon, Kira, Ulz, Hyagt and Zelter rivers which mainly flows from Mongolia to Russia.

- According to this agreement Mongolian Government appointed Ambassador for Transboundary Water who Vice Minister of Ministry of Nature and Environment.
Transboundary Water Cooperation with Russia

- The Ambassadors meets each year in the Mongolia and Russia and discusses Transboundary Water Working Group Reports of given year and decides challenges faced. This year have organized ninth meeting of Transboundary Water Ambassadors in the Yekaterinburg, Russia.

- The working groups meets regularly two times in a year and exchange information about Results of Transboundary water activities of each sides in the given year. The working groups consisted various field water specialists from government, scientific research institutes and inspectors.
Transboundary Water Cooperation with Russia

- The key activities of Transboundary waters are information exchange information relating water discharge, regime, quality monitoring results and flood and emergency situation.

- During last years carried out together some surveys as Selenge River Water regime, fishery survey and pollution sources in the upper Selenge basin. Now Russian side developing General Scheme of water use and Mongolia side Integrated Water Resources Management Plan for Selenge Basin.

- Concluding, Transboundary Water Cooperation Mongolia and Russia have going full friendly and transparent way during more 15 years.
Transboundary Water Cooperation with China

- The Mongolia and China Government have signed Agreement of Transboundary Water in 1994.

- Within this Agreement regulates following Transboundary Waters as Kherulen, Halh, Bulgan and Buir Lakes which mainly flows from Mongolia to China.

- According to this agreement, first meeting of Transboundary Water Commission held in 1998, Ulaanbaatar and approved Guidelines of Commission. The Commission heading by Vice Minister of Ministry of Nature and Environment Mongolia and Vice Minister of Water Resources, China.

- Key issues of Transboundary Water Cooperation with China are monitoring data exchange on transboundary water discharge, regime, quality and flood. Also, Buir Lake issues.
Transboundary Water Cooperation with China

- The Head of Commission meets each two year in the Mongolia and China and discusses Transboundary Water Working Group Reports of given year and decides challenges faced. Last year have organized fifth meeting of Commission in the Beijing, China.

- The working groups meets regularly one times in a year and exchange information about Results of Transboundary water activities of each sides in the given year. The working groups consisted various field water specialists from Government, Scientific Research Institutes and Inspectors same as above mentioned.
Mongolia Policy for Transboundary Water Cooperation

- **Mongolia Government** fully responsible for the Transboundary Water Agreements with Two Great Honorable Neighbors Russia and China.

- **During the long time history** we had not serious problem until today. And hope continue to future.

Thank you very much for your attention and invitation. We are glad to exchange information and experience.
