

# Measuring the Digital Economy in Australia

Australian Bureau of Statistics  
Informing Australia's important decisions

- Definition and background
- Methodology
  - ‘Digital’ products and services
  - Assumptions
  - Current price and volume estimation
- Data sources
- Preliminary results
- Way forward
- Questions for discussion

# Definition and Background

- Digital economy can be defined as economic activities enabled by digital technologies, such as advanced computer hardware and networks, smart phones and artificial intelligence.
- Why measure the digital economy?
  - The emergence of better quality products and improvements
  - Rapid growth
  - A notable contributor to the overall economy
  - Current ABS publications do not focus on the economic performance of the digital economy

- Follow the BEA approach, as outlined in Barefoot et al. (2018)
- The ABS estimation of the digital economy involves three major steps:
  - Define the digital economy for the account.
    - \* Digital-enabling infrastructure
    - \* E-commerce
    - \* Digital media
  - Identify the Supply-use (SU) products and services according to the definition for the digital economy.
    - \* ‘Exclusively’ or ‘primarily’ digital products (some exceptions).
  - Identify the production of the ‘digital’ products with the SU table, and estimate the associated output and value added.
    - \* Assumptions

# Methodology: 'Digital' Products and Services

Digital Sectors	SUPC	Product Description
Digital media	56005	Radio and TV broadcasting services
	56010	Cable (Pay TV) and other subscription broadcasting services
	57005	Internet publishing and broadcasting
	57010	Internet publishing advertising sales
E-commerce - Wholesale	33005	Wholesale margin
	33010	Other wholesale trade
E-commerce - Retail	39005	Retail margin
	39010	Other retail trade
Infrastructure - Hardware	16015	Recorded media reproduction
	24005	Photographic goods (incl. optical fibres) and ophthalmic equipment (excl. spectacles)
	24025	Computer hardware and peripherals (incl. photocopiers and parts)
	24035	Vending, video, monetary, office and other electronic hardware nec.
Infrastructure - Software	54010	Software publishing
	54020	Copyright leasing
Infrastructure - Support services	57020	Data processing and information storage services
	70005	Computer consultancy, systems design and related services
	94010	Machinery and equipment repair and maintenance services
Infrastructure – Telecommunications	24030	Telecommunication and audio visual equipment
	24040	Electric lights (incl. torches); cables and batteries (excl. automotive)
	57015	Internet services
	58005	Telecommunication services (excluding equipment)

# Methodology: Assumptions

- The intermediate consumption to output ratio in the ‘digital’ industry is identical to that in the total industry.
- The digital and non-digital split of retail and wholesale margin is identical across all industries.

# Methodology: Current Price Estimation

## Supply-use Industry (SUIC) View

### Industry Output

- SUPC1 (Digital product)
- SUPC2 (Digital product)
- SUPC3
- SUPC4

⋮

⋮

Industry total output (sum of “digital & non-digital output)

### Industry Intermediate Consumption

- SUPC1
- SUPC2
- SUPC3

⋮

⋮

Industry total intermediate consumption

### Industry Value Added

## “Digital” Component of SUIC

### Industry “digital” output

- SUPC1
- SUPC2

Industry total “digital” output (sum of the “digital” SUPC’s)

### Industry Intermediate Consumption for the production of digital output

= Industry total “digital” output – Industry “digital” value added

Industry intermediate consumption split to SUPC proportionally

### Industry “Digital” Value Added

= Industry value added \* Industry total “digital” output / Industry total output

- A ‘digital’ sector is the summation of the relevant digital components across SUIC’s

# Volume Estimation – Double Deflation

## Digital sector output

current price ( $P_t Q_t$ )

- SUPC1
- SUPC2
- ⋮

Deflate  
with...

## Implicit price

deflator for  
output ( $P_t/P_{t-1}$ )

- SUPC1
- SUPC2
- ⋮

Digital sector output  
constant price ( $P_{t-1} Q_t$ )

- SUPC1
- SUPC2
- ⋮

**Sector total digital output  
constant price**

## Digital sector intermediate consumption

current price ( $P_t Q_t$ )

- SUPC1
- SUPC2
- ⋮

Deflate  
with...

## Implicit price

deflator for  
intermediate  
consumption ( $P_t/P_{t-1}$ )

- SUPC1
- SUPC2
- ⋮

## Digital sector intermediate consumption

constant price ( $P_{t-1} Q_t$ )

- SUPC1
- SUPC2
- ⋮

**Sector total intermediate  
consumption  
constant price**

**Digital sector  
value added  
constant price**

**Sector total  
digital output  
constant price**

**Sector total intermediate  
consumption  
constant price**

# Volume Estimation – Chain Volume Measure

## ▶ Estimating Sector Value Added Volume (also applies to sector output)

Link 3 – Unchained Volume Index (Annual Growth)

$$\frac{\text{Sector value added } PY}{\text{Lagged sector value added}} = \frac{P_{t-1}Q_t}{P_{t-1}Q_{t-1}}$$

Link 4 – Chain Volume Index

$$\begin{aligned} \frac{Q_t}{Q_0} &= \text{Link}3_1 \times \text{Link}3_2 \times \text{Link}3_3 \times \dots \times \text{Link}3_t \\ &= \frac{P_0Q_1}{P_0Q_0} \times \frac{P_1Q_2}{P_1Q_1} \times \frac{P_2Q_3}{P_2Q_2} \times \dots \times \frac{P_{t-1}Q_t}{P_{t-1}Q_{t-1}} \end{aligned}$$

Link 5 – Sector Chain Volume Value Added

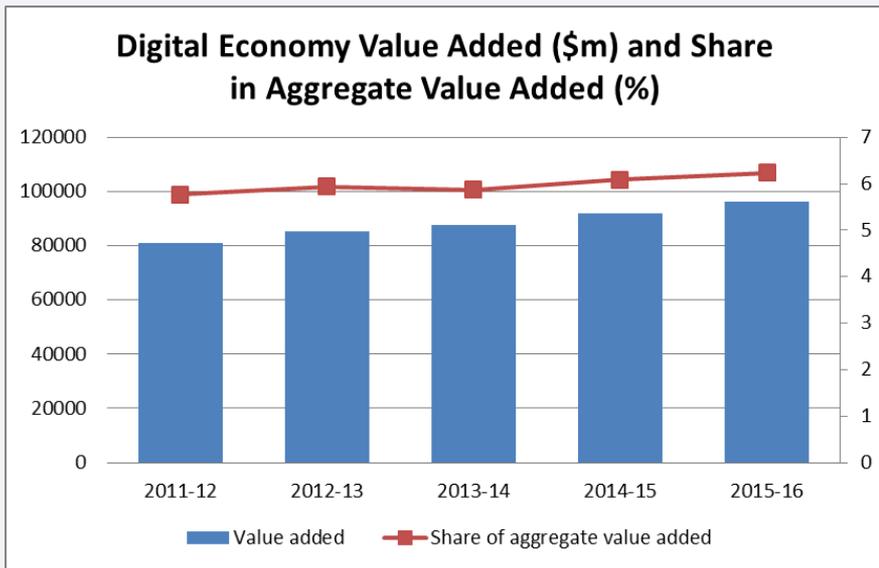

$$\begin{aligned} P_{ref}Q_t &= \frac{\text{Sector value added } CP_{ref}}{\text{Chain volume index}_{ref}} \times \text{Chain volume index}_t \\ &= P_{ref}Q_{ref} \times \frac{Q_0}{Q_{ref}} \times \frac{Q_t}{Q_0} \end{aligned}$$

- Digital economy value added growth is the Tornqvist aggregation of the underlying sectors

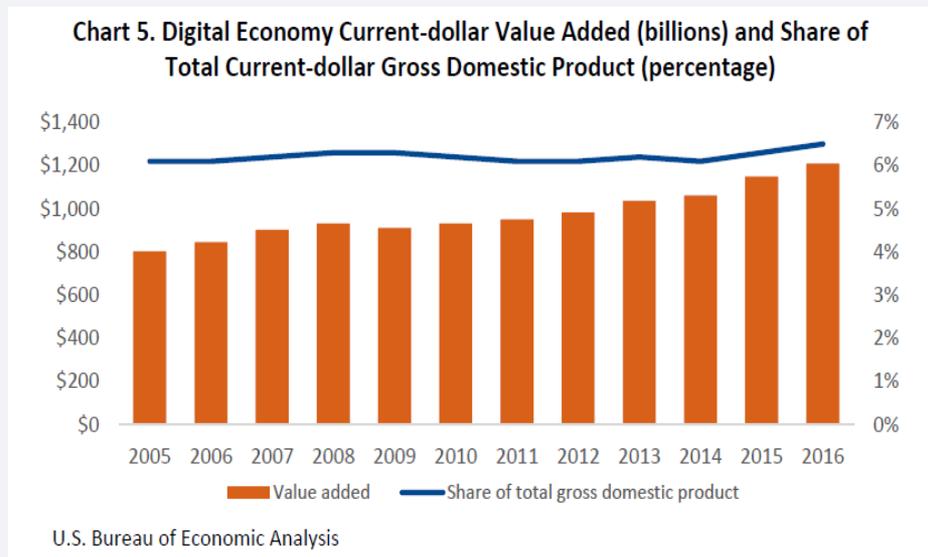

- ABS Supply-use table, 2011-12 to 2015-16.
- ABS Input-output table, 2011-12 to 2015-16.
- NAB Online Retail Sales Index (NORSI), 2010 to 2016.
- Experimental Estimates of Online Retail Turnover (Appendix), 2014 to 2018, ABS Cat no. 8501.0 – Retail Trade, Australia.
- Summary of IT Use and Innovation in Australian Business, 2005-06 to 2015-16, ABS Cat no. 8166.0.
- Economic Activities Survey (EAS) industry clearance documentation, 2006-07 to 2015-16.

# Preliminary Results

## Australia

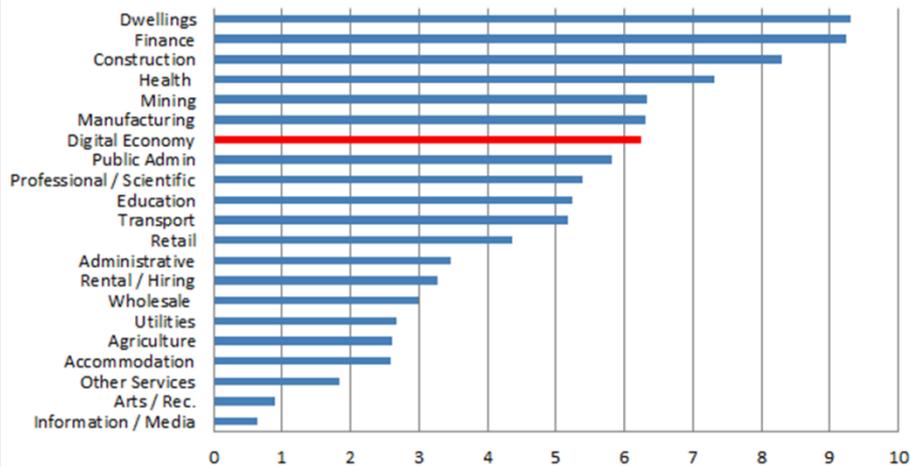

## U.S.

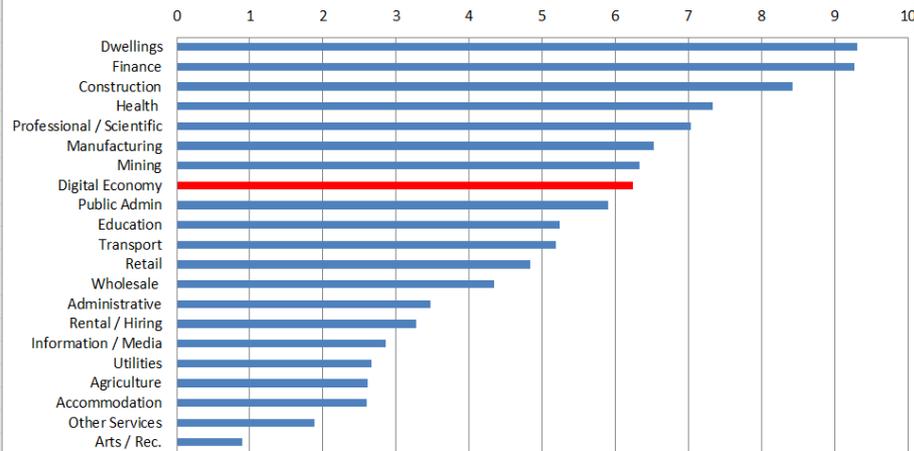

# Preliminary Results

## Australia

### Industry Share in Aggregate Value Added (%), 2015-16

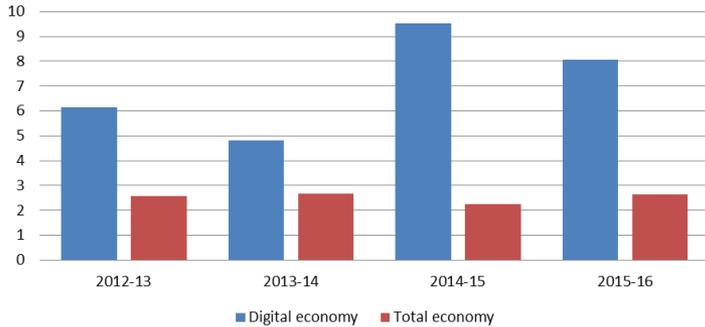

### Industry Share in Aggregate Value Added (%), Digital Economy Embedded in Industries, 2015-16

Note: the digital economy's share has not been removed from the industries for which it is partially embedded, therefore the shares add to more than 100% of GDP.

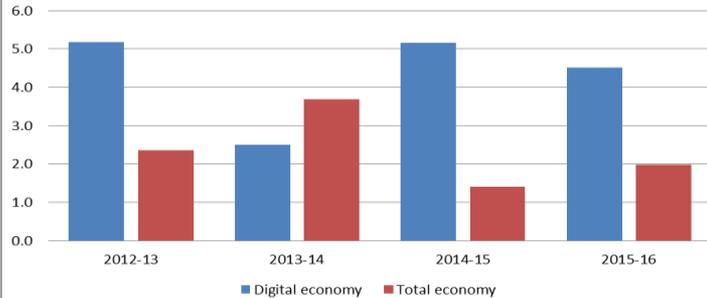

# Preliminary Results

**Annual Value Added Volume Growth: Digital Economy vs. Total Economy (%)**

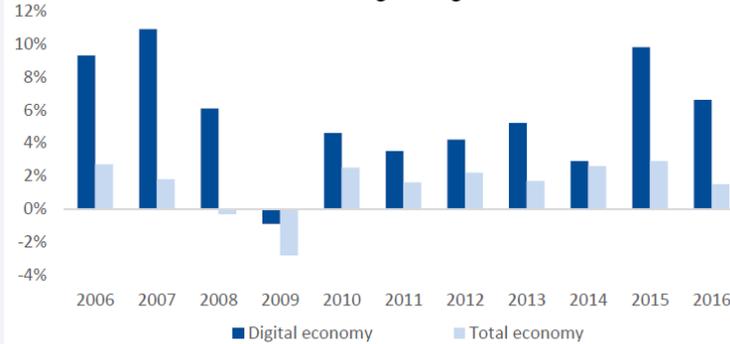

Australia

**Annual Nominal Value Added Growth: Digital Economy vs. Total Economy (%)**

**Chart 3. Digital Economy Real Value Added and Total Economy Real Gross Domestic Product: Percentage Change from Previous Year**

Share in Digital Economy Value Added 2015-16 (%)

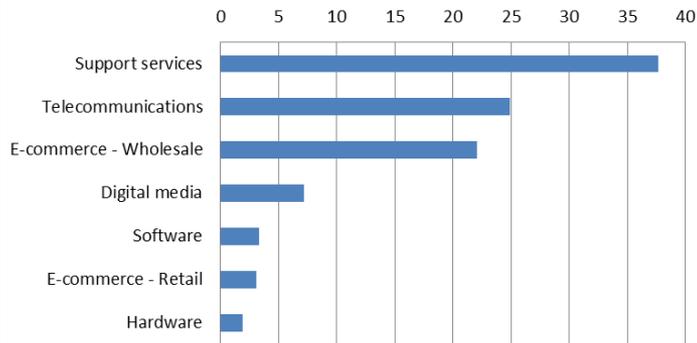

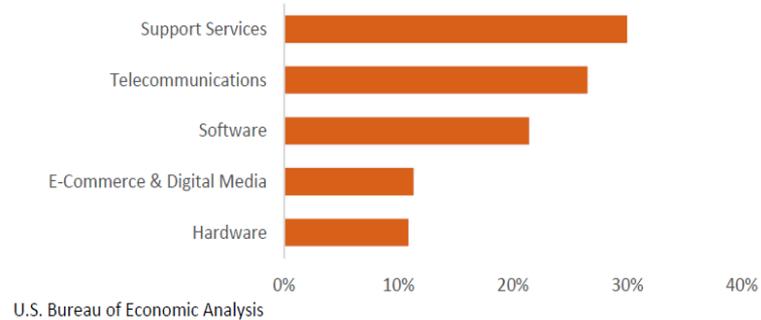

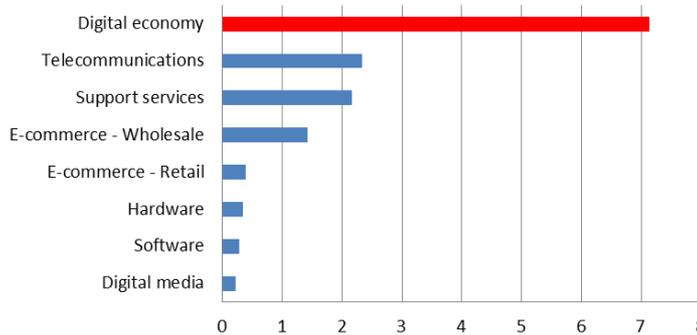

Chart 6. Components of the Digital Economy: Current-dollar Value Added Share of Total, 2016

Australia

Contribution to Average Annual Value Added Growth in the Digital Economy (%), 2012-13 to 2015-16

U.S.

# Way Forward

- Extend the historical time series for the digital economy back to mid 2000's; update with the latest Supply-use data.
- ABS information paper defining and measuring the digital economy in Australia.
- Improve coverage of digital goods and services in product classifications

# Questions for Discussion

- Is the definition and approach for measuring the Australian digital economy appropriate?
- Are the preliminary results plausible?
- Would a publication under the BEA approach meet user needs?
