Implementation of SDGs’ in Poland

Statistics Poland as a participant of the process

Magdalena Ambroch

18-19 April 2018 Second Expert Meeting on Statistics for Sustainable Development Goals, Geneva
SDGs’ implementation in Poland

Basis – Strategy for Responsible Development (adopted in 2017)
Basing on partnership

Team for consistency of Strategy for Responsible Development with 2030 Agenda:

→ Ministries
→ Statistics Poland
→ Regional authorities
→ Socio-economic partners
→ UN agendas
→ Academia
Mission

Tasks of the Team:

- Establishment of national priorities
- Monitoring progress in SDGs’ implementation (indicators)
- Exchange of knowledge and good practices for SDGs’ implementation
- Preparation for Poland’s VNR (July 2018)
Before VNR 2018

Ministry of Entrepreneurship and Technology (coordination)

→ presentation and Report "Realization of Sustainable Development Goals in Poland"

Statistics Poland

→ establishment of national monitoring indicators

→ presentation and communication of national monitoring indicators:
  • statistical annex to the Report
  • NRP
  • promotional publication
3. GOOD HEALTH AND WELL-BEING

Key message:
In Poland, the most common cause of deaths are diseases of the circulatory system. For several years, the number of deaths per 100 thousand population remains at a stable level.

Additional message:
The average life expectancy of a man in Poland amounts almost 74 years, and women - nearly 82 years. This means that Poles live longer than a dozen years ago - men by 4.1 years, and women by 3.7 years.

Key message:
Over the past few years, the number of medical personnel per 10 thousand population in Poland has increased.

Additional message:
The share of doctors specialists in the total number of doctors in Poland amounts to nearly 68%.

Key message:
Since many years, mothers' deaths per 100 thousand live births maintains at the level of 2.

Additional message:
Most children (about 88% of all) are born by women aged 25-29 and older - aged 30-34 (over 28% of children).

Key message:
The situation in the area of care for the youngest children improves. The number of deaths among children under the age of 5 per 1 thousand live births, as well as the ratio of the number of deaths of neonates to number of live births, systematically declines.

Additional message:
In 2016, the share of live births in the total number of births amounted to 99.7%.
Lessons learned

1. National needs may be different from international
   → required balance between needs of diverse partners
   → need for clear communication of different global and national sets of indicators

2. Enhancing position of statistics needed
Practical suggestions

- Identify national needs
- Educate partners
- Communicate different needs and various statistical offers
- Promote statistics (e.g. publications)
