Interaction of the Statistical Register with Registers (records) in other agencies

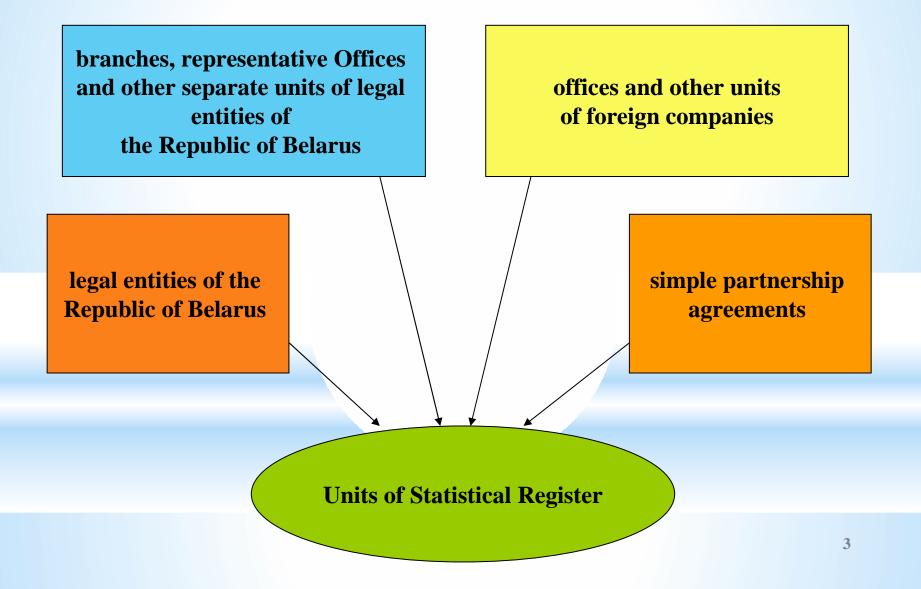

Nichiporuk Svetlana

Head of the Division of Statistical Register of the National Statistics Committee of Belarus

* Statistical Register of the Republic of Belarus is one of the most important and effective statistical tools.

One of the main directions of improving the quality of official statistics:

improvement of the statistical register which allows to organize the statistical monitoring of the phenomena occurring in the economy, making maximum use of administrative sources.

* Basic conditions for the use of administrative data in statistics

A clear legal framework and confidentiality

Common system of the identification of business entities

Common base of regulated reference data

Cooperation between the state statistics bodies and government agencies that hold administrative data

Law of the Republic of Belarus «On State Statistics»

Regulation on the National Statistics Committee of the Republic of Belarus

Establish the right of the state statistics for the maintenance of Statistical Register to receive in the manner prescribed by law, information from the unified state register of legal entities and individual entrepreneurs (USR), other registers (records), databases, maintained by government agencies.

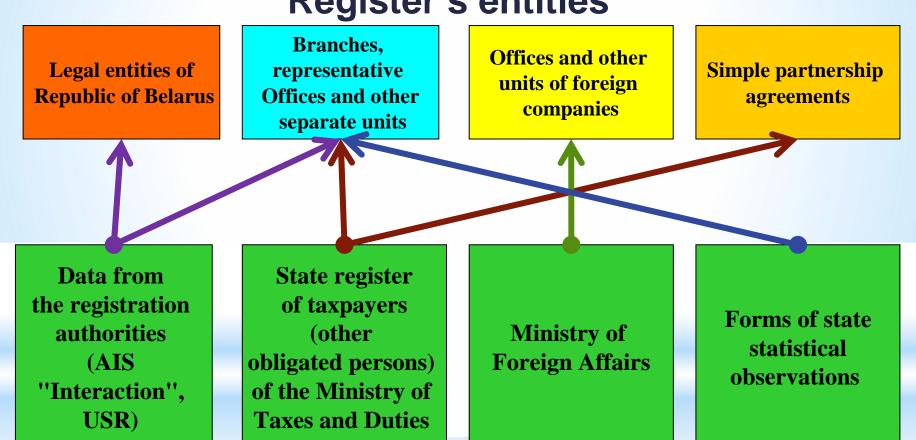

In order to implement the information exchange statistical register includes:

OKPO code - a number assigned by bodies of state statistics

OKULP code - a number assigned by registration authorities

UNP code - a number assigned by the tax authorities

*Sources of updating of Statistical Register's entities

*Administrative sources of updating details of Statistical Register's entities

Information is exchanged within:

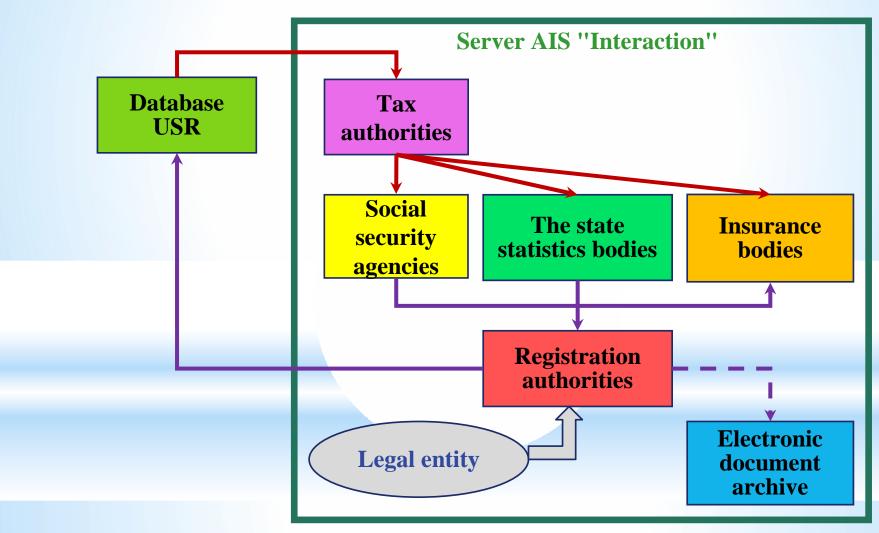

bilateral agreements

The most important and major sources of administrative data:

AIS «Interaction» - an automated information system designed for communication between the registration authorities with the tax authorities, bodies of state statistics, social security agencies, insurance agencies, customs authorities, archives, banks in the implementation of actions in relation to legal persons and individual entrepreneurs.

* The route of registration in the state bodies

USR - Nationwide registration system, designed to provide reliable information on legal entities and individual entrepreneurs.

State register of taxpayers - a nationwide system of registration of taxpayers, designed for tax control and management of tax reporting.

State Property Funds - keep a register of state property, including the share of state ownership in the share capital of non-state legal entities.

Further expansion of the use of administrative data of government agencies for statistical register will allow to:

- establish a unified information base for the state statistical observations
- maintain the relevance of statistical resources without direct participation of legal entities subject to a statistical observation
