Forest sector outlook study based on global market trade modelling

- Most of the presented policy questions can be answered using a GTM model (e.g. EFI-GTM) linked with relevant wood supply and product demand scenarios.
- Changes in land-based forest services (e.g. carbon, conservation and recreation areas) and wood supply depending on forest resource and its utilisation (management, technology and related costs) need national data and modelling.

National capacities supported by ENFIN (33 countries), DIABOLO (25 countries), ToS SFM (+UNECE countries)
