A. PROPOSAL

REGULATIONS NOS. 98 AND 112

Annex 4,

Paragraph 1.1.1.1., add a new subparagraph (d) to read:

"(d) In the case of a passing beam designed to provide bend lighting with the addition of a light source, this light source shall be switched on for 1 minute, and switched off for 9 minutes during the activation of the passing beam only."

B. JUSTIFICATION

Industry requested the Working Group Photometry to clarify the situation for the test procedure on behalf "TEST FOR STABILITY OF PHOTOMETRIC PERFORMANCE" in case of bend lighting function. Because the bend lighting function is in case of an additional light source only active for a short time period, industry sees a need to modify the test procedure (see overview of operational periods in annex).
