ECONOMIC COMMISSION FOR EUROPE

INLAND TRANSPORT COMMITTEE

World Forum for Harmonization of Vehicle Regulations (WP.29)

Working Party on Lighting and Light-Signalling (GRE)
(Fifty-fourth session, 5–8 April 2005, agenda item 9.)

PROPOSAL FOR DRAFT AMENDMENTS TO REGULATIONS Nos. 48 and 87
(Installation of lighting and light-signalling devices – Daytime running lamps)

Transmitted by the expert from the International Organization of
Motor Vehicle Manufacturers (OICA)

Note: The text reproduced below was prepared by the expert from OICA in order to amend the provisions of Regulations Nos. 48 and 87 regarding the colour of daytime running lamps. The suggested amendments to the current text of the Regulations are marked in bold characters.

Note: This document is distributed to the Experts on Lighting and Light-Signalling only.
A1. PROPOSAL FOR AMENDMENTS TO UNECE REGULATION No. 48

Paragraph 5.15., amend to read:

"5.15. The colours of the light emitted by the lamps are the following:

   .....  
   end-outline marker lamp: white in front, red at the rear
   daytime running lamp: white or amber
   rear retro-reflector,
   non- triangular: red
   ....."

Paragraph 6.19.7., amend to read (addition of a new sub-paragraph at the end):

"6.19.7. Electrical connections

   .....  
   The daytime running lamp shall switch off automatically when the headlamps are switched on, except when the latter are used to give intermittent luminous warnings at short intervals.

   The daytime running lamp, if combined or reciprocally incorporated with a category 1b front direction indicator, shall switch off automatically as long as the front direction indicator is activated. It shall also switch off automatically as long as the hazard warning signal is activated."

   *   *   *

A2. PROPOSAL FOR AMENDMENTS TO UNECE REGULATION No. 87

Insert a new paragraph 7.5., to read:

"7.5. All measurements shall be made with an un-coloured or amber coloured standard filament lamp of the category prescribed for the device, the supply voltage being so regulated as to produce the reference luminous flux prescribed for that category of lamp."

Paragraph 9., amend to read (deletion of the first sub-paragraph):

"9. COLOUR OF LIGHT

   The colour of the light emitted inside the field of the light distribution grid defined at paragraph 3. of annex 3 shall be white. It shall be measured by using a source of light at a colour temperature of 2856 K (corresponding to illuminant A of the International Commission on Illumination, CIE). However, for lamps equipped with non-replaceable light sources (filament lamps and other), the colorimetric characteristics should be verified with the light sources present in the lamp, in accordance with paragraph 10.2. of this Regulation."
The colour of the light emitted inside the light distribution grid defined at paragraph 5. of Annex 3 must be within the limits of the trichromatic co-ordinates prescribed in Annex 4 to this Regulation. Outside this field no sharp variation of colour shall be observed.

Annex 4, amend to read:

"Annex 4

COLOUR OF LIGHT

TRICROMATIC COORDINATES

WHITE

Limit towards blue: \( x \geq 0.310 \)
Limit towards yellow: \( x \leq 0.500 \)
Limit towards green: \( y \leq 0.150 + 0.640 \times \)
\( y \leq 0.440 \)
Limit towards purple: \( y \geq 0.050 + 0.750 \times \)
Limit towards red: \( y \geq 0.382 \)

CORNER POINTS

\[
\begin{array}{cc}
X & Y \\
0.310 & 0.348 \\
0.310 & 0.283 \\
0.433 & 0.382 \\
0.500 & 0.382 \\
0.500 & 0.440 \\
0.433 & 0.440 \\
\end{array}
\]

AMBER

Limit towards green: \( y \leq x - 0.120 \)
Limit towards red: \( y \geq 0.390 \)
Limit towards white: \( y \geq 0.790 - 0.670 \times \)

For checking these colorimetric characteristics, a source of light at a colour temperature of 2,856 K corresponding to illuminant A of the International Commission on Illumination (CIE) shall be used in conformity with the Convention on Road Traffic (E/CONF.56/16/Rev.1).

However, for lamps equipped with non-replaceable light sources (filament lamps and other), the colorimetric characteristics should be verified with the light sources present in the lamp, in accordance with paragraph 10.2. of this Regulation."

* * *
B. JUSTIFICATION

Regulations from USA, Canada and Australia permit white or amber colour for daytime running lamps (DRL). UNECE Regulation only permits white colour, which makes for instance the use of direction indicators lamps forbidden as DRL. This proposal could enlighten the harmful consequences of the current stringent prescription for what concerns safety, economy and industry:

- space competition to implement the functions in front of the vehicle;
- increase of lamps failure statistics;
- increase of complexity concerning electrical network;
- multiplication of versions depending on the vehicles destinations;
- …

If combined or reciprocally incorporated with direction indicator lamps, DRL can adopt the same operation which has been proved efficient during many years of practice in North-America, pursuant to FMVSS 108, paragraph S5.5.11. (a) (5).

This document, based on informal document No. GRE-53-7, aims to meet the concerns expressed by some delegates during the fifty-third session of GRE. These concerns addressed the conspicuity of direction indicators when combined with a DRL. The present document proposes that if a DRL is combined or reciprocally incorporated with a front direction indicator, it shall be only with a category 1b front direction indicator, which is of the highest photometric category.
