ECONOMIC COMMISSION FOR EUROPE

INLAND TRANSPORT COMMITTEE

Working Party on Rail Transport
(Fifty-third session, 6-8 October 1999,
agenda item 10(c))

EUROPEAN AGREEMENT ON MAIN INTERNATIONAL RAILWAY LINES (AGC)

1997 AGC Inventory

Note by the Secretariat

Please note that the distribution of documentation for the Working Party on Rail Transport (SC.2) is no longer "restricted". Accordingly, the secretariat has adopted a new numbering system whereby all working documents other than Reports and Agendas will be numbered as follows: TRANS/SC.2/year/serial number. Reports, Agendas, resolutions and major publications will retain their previous numbering system (i.e. TRANS/SC.2/189).

GE.99-22547
In accordance with a decision of the ECE Inland Transport Committee (ECE/TRANS/125, para.101), an inventory of technical and operational parameters contained in the European Agreement on Main International Railway Lines (AGC) and in the European Agreement on Important International Combined Transport Lines and Related Installations (AGTC) should be established.

In 1993, the ECE issued a first inventory for the year 1992, covering only the AGTC network. For the year 1997, a second inventory is now being established on the basis of the attached pre-filled questionnaire covering both the AGC and the AGTC networks. Since both networks overlap to a large extent, and since many parameters in both agreements are identical, this second inventory will allow a comparison between the infrastructure and service standards and parameters in 1992 with those in 1997 for the most important railway lines in Europe.
### INVENTORY OF EXISTING STANDARDS AND PARAMETERS OF THE AGC AGREEMENT AND THE AGTC AGREEMENT

<table>
<thead>

**EXPLANATORY NOTES**
For an explanation of loading gauge code numbers used by some countries (i.e. Germany and Italy), it should be noted that:

UIC B = P 45, C 45; P= Pocket-wagons
UIC C1= P 102, C 102; C=Containers/swap-bodies

EXPLANATIONS OF FOOTNOTES IN THE TABLES

b/ See AGTC, annex I; see AGC, annex I.
“C-E” denotes railway lines which are contained and which are essentially identical in the AGTC and AGC Agreement.
“C” denotes railway lines which are contained only in the AGTC Agreement.
“E” denotes railway lines which are contained only in the AGC Agreement.

c/ AGC and AGTC lines in a country have been divided into sections (parts of lines) which have the same or nearly the same infrastructure parameters (for example: Belgium: C-E 15 may be separated into two sections: "(Roosendaal- Antwerpen-Bruxelles" and Bruxelles-Quévy (-Feignies)”).

d/ Target values given in the table refer to existing lines only. In filling in the table the actual values have been inserted indicating the value of the most restrictive parameters.

e/ Minimum distance between track centres on existing lines: 4.0m.

f/ For wagons ≤ 100 km/h: 22.5 t; for wagons ≤ 120 km/h: 20 t.

g/ Nominal minimum speed on existing lines: 160km/h.

h/ For locomotives ≤ 200km/h: 22.5t at a speed of 200km/h (AGC only).

i/ For rail cars and rail motor sets ≤ 300km/h: 17t at a speed of 160km/h (AGC only).

j/ AGC only.

k/ For wagons ≤ 100km/h: 20t at a speed of 100km/h, for wagons ≤ 120km/h: 20t at a speed of 120km/h, for wagons ≤ 140km/h: 18t at a speed of 140km/h.

l/ Authorized mass per linear metre: 8t.

m/ Maximum gradient: (a) AGTC: (not specified), (b) AGC: 35mm/m.
n/ Minimum platform length in principal stations: 400m (AGC only).

q/ Minimum useful siding length: 750m.

p/ "never", "seldom", "occasionally", "often", or "always" (AGC only).

EXPLANATIONS OF SYMBOLS AND ABBREVIATIONS EMPLOYED IN THE TABLES:

... = Not available and should be filled in
-  = Magnitude zero
.  = Not applicable
km/h = Kilometre-hour
t  = Tonne
m  = Metre
min. = Minute
