

Packagings requirements

(ST/SG/AC.10/C.3/2000/39, proposal of the United States of America)

Transmitted by the European Secretariat of Manufacturers of Light Metal Packaging
(SEFEL)

Obviously the United States of America want that each packaging is accompanied with all necessary specifications and instructions for the filler. We fear that this might be a rather voluminous and time consuming process.

We, therefore, propose to add in the model Regulations under 6.1.5.8 that the contents of the Test Reports, ccomplemented by elements of the US proposal, should be free to all fillers in order to be informed about the packaging in mind.

We furthermore think that the US proposal is hardly applicable to reconditioned packagings.
