

UN/SCETDG/18/INF.66

ST/SG/AC.10/C.3/2000/14

AS REVISED ON 6 JULY 2000

Transmitted by ICPP

1. Add the following definitions to 1.2.1 in alphabetical sequence:

“Remanufactured IBCs are metal, rigid plastics and composite IBCs that:

- (a) are produced as a UN type from a non-UN type; or
- (b) are converted from one UN design type to another UN design type.

Remanufactured IBCs are subject to the same requirements of these Regulations that apply to new IBCs of the same type. (See also design type definition in 6.5.4.1.1.)”

“Repaired IBCs are metal, rigid plastics or composite IBCs that, as a result of impact or for any other cause (e.g. corrosion, embrittlement or other evidence of reduced strength as compared to the design type) are restored so as to conform to the design type and to be able to withstand the design type tests. For purposes of these Regulations, the replacement of the rigid inner receptacle of a composite IBC with a receptacle conforming to the original manufacturer’s specification, is considered repair. However, routine maintenance of IBCs (see definition below) is not considered repair. The bodies of rigid plastics IBCs and the inner receptacles of composite IBCs are not repairable.”

“Routine maintenance of IBCs is the routine performance on metal, rigid plastics or composite IBCs of operations such as:

- a) cleaning;
- b) removal and reinstallation or replacement of body closures (including associated gaskets), or of service equipment, conforming to the original manufacturer's specifications, provided that the leaktightness of the IBC is verified; or
- c) restoration of structural equipment not directly performing a dangerous goods containment or discharge pressure retention function so as to conform to the design type (e.g. the straightening of legs or lifting attachments)."

2. Add a new 4.1.2.5, to read:

"Except for routine maintenance of metal, rigid plastics and composite IBCs performed by the owner of the IBC, whose State and name or authorized symbol is durably marked on the IBC, the party performing routine maintenance shall durably mark the IBC near the manufacturer's UN design type marking to show:

- (a) the State in which the routine maintenance was carried out; and
- (b) the name or authorized symbol of the person performing the routine maintenance."

3. Revise the last sentence of 6.5.1.6.4 to read:

"A report of each inspection shall be kept by the owner of the IBC at least until the next inspection. The report shall include the results of the inspection and shall

identify the party performing the inspection. (See also the marking requirements in 6.5.2.2.1.)”

4. Revise 6.5.1.6.5 to read:

“When the structure of an IBC is impaired as a result of impact (e.g. accident) or any other cause, it shall be repaired or otherwise maintained (see definition of *routine maintenance of IBCs* in 1.2.1), so as to conform to the design type.”

5. Add a new 6.5.1.6.6 (and renumber existing 6.5.1.6.6 and 6.5.1.6.7), to read:

“In addition to any other testing and inspection requirement in these Regulations, an IBC shall be subjected to the full testing and inspection requirements set out in 6.5.4.14.3 and 6.5.1.6.4(a), and the required reports shall be prepared, whenever it is repaired.

(a) Except for repairs by the original IBC manufacturer whose design type marks appear on the IBC, or the owner of the IBC whose State and name or authorized symbol is durably marked on the IBC, the party performing the repair shall durably mark the IBC near the manufacturer’s UN design type marking to show:

- (i) the State in which the repair was carried out;
- (ii) the name or authorized symbol of the party performing the repair; and,
- (iii) the date (month and year) of the repair (if not already marked in accordance with 6.5.2.2.1).

- (b) Such tests and inspections may be considered to satisfy the requirements for the two and a half and five year periodic test and inspection.”
6. Revise 6.5.4.14.4 to read:
“The results of tests and the identity of the party performing the tests shall be recorded in test reports to be kept by the owner of the IBC at least until the date of the next test.”
7. Revise the last sentence of 4.1.1.1 to read:
“These provisions apply, as appropriate, to new, reused, reconditioned or remanufactured packagings, and to new, reused, repaired or remanufactured IBCs, and to new or reused large packagings.”
8. Revise 4.1.1.12(c) to read:
“(c) after the repair or remanufacture of any IBC, before it is re-used for transport.”
9. Revise the heading of 6.5.4.14 to read “Testing of metal, rigid plastics and composite IBCs” and revise 6.5.4.14.3 to read:
“Each metal, rigid plastics and composite IBC for liquids, or for solids which are filled or discharged under pressure, shall be subjected to the leakproofness test, as an initial test (i.e. before the IBC is first used for transport), after repair, and at intervals of not more than two and a half years.”
