ECONOMIC COMMISSION FOR EUROPE

INLAND TRANSPORT COMMITTEE

Working Party on Rail Transport
(Fifty-fourth session, 3-5 October 2000,
agenda item 7 (a))

FACILITATION OF BORDER CROSSING IN INTERNATIONAL RAIL TRANSPORT

Follow-up to the ITC resolution No. 248 on the Reduction of Border Stopping Times of Shuttle
Trains in International Traffic

Note by the secretariat

Following the request of the Inland Transport Committee (ITC), the Working Party decided, at its fifty-third session to monitor the implementation of ITC resolution No. 248. In this Resolution, the ITC invites the ECE member Governments to intensify their efforts in order to limit overall to 60 minutes (30 minutes for each of the neighbouring countries) the waiting time of shuttle trains at borders (ECE/TRANS/128, annex 1).

Following the request of the Working Party (TRANS/SC.2/192, para.26), the secretariat had approached the countries in order to identify shuttle trains to be included in a monitoring system. The answers received by the secretariat are reproduced below.

Following the recommendation of the informal meeting held in Geneva on 15 June 2000 (TRANS(SC.2/2000/18), the Working Party may wish to consider whether implementation of Resolution No. 248 could be included within the detailed monitoring system on border crossing that is intended to be developed along certain rail corridors, as described in TRANS/SC.2/2000/6. According to the definitions included in that document, monitoring of shuttle trains would refer to *block freight trains circulating from origin to destination following a fixed route with a periodicity of at least 1 circulation per week in each sense*.

The Working Party is invited to examine this proposal, and particularly to agree on a clear definition of *shuttle trains*.

Annex

ANSWERS FROM GOVERNMENTS

BULGARIA

The monitoring and the international contacts on border crossing and implementation of resolution No. 248 are undertaken mainly by the Ad Hoc Working Group for the reduction of border stopping times of shuttle trains, which is a part of Project IV Group for transport infrastructure development under the South-Eastern Europe Cooperation Initiative.

Contacts take place both, bilaterally and within inter-ministerial commissions for railway transport.

CZECH REPUBLIC

The route of shuttle trains, together with the stay of trains at borders, is currently being prepared; the aim is for trains put into the shuttle service to be used as much as possible. Selected shuttle trains are being monitored by the Freight and Forwarding Transport Department at the CD Sales and Operations Division. Forwarding plans are compiled for these trains on a monthly basis; these plans are consulted with dispatchers and approved by the relevant recipient railway. In terms of international combined transportation, the stay of selected shuttle trains at border crossings ranges from five to sixty minutes. The observance of set journey times for trains in road- railway - RO - LA transportation is monitored on a daily basis and presented at the department head's morning evaluation.

Average stays of shuttle trains at railway border crossings are given in document TRANS/SC2/2000/5.

Abbreviations used:

Nex: freight express

Vn: levelling freight train

Pn: continuous freight train

discussions are currently being held on a combined transport shuttle train from MAV to PKP; the waiting period for trains at the railway border crossings between CD and ZSR and CD and PKP should keep to 30 minutes in accordance with the AGTC Agreement.

HUNGARY

For the 1999/2000 timetable period, 39 pairs of international passenger trains through 7 principal border crossings were checked. 86% of them stays less than 30minutes at the border stations in Hungary. For the remaining 14 % the overtime is caused by the border control authorities in 60% and by train traffic problems (train paths' coincidences) in 40%.

In freight, 13 pairs of daily block trains (rolling road, container, for the client) through 4 common border stations or where the operation is taken over, were controlled, 38% of the trains are within or at the maximum 60 minutes. The efforts to implement ITC resolution No. 248 are hindered by the requirements emerging with Hungary's accession to the EU as discussed in the commentary to the measures taken to reduce delays at the border crossings.
