

OICA COMMENTS ON DOCUMENT TRANS/WP29/GRSG/2004/16

(Indian comments on the draft gtr on identification of controls,
tell-tales and indicators)

Transmitted by the expert from OICA

No. 41: Selector switch of Bi-fuel vehicle

In view of document TRANS/WP29/GRSG/2004/16, it seems that the layout of the symbol is regulated as well as the symbol itself. The aim of this GTR is however not to specify the layout of the symbols. The space taken by a layout such as proposed in the Indian proposal could be too large in some cases, e.g. when it must be fitted on the control, or nearby.

Concerning the proposed symbol, please see the comment below.

No. 42: Fuel level

ISO Standard 2575 defines this symbol in annex Z as symbol N° Z.03. However, this annex is informative only and the symbols with circles are not dedicated to control, tell-tale and indicator. A similar symbol without circle is currently in discussion within ISO for those purpose.

OICA hence suggests to wait for the ISO result before amending the draft GTR.
