(39<sup>th</sup> GRSP, 15 – 19 May 2006,  
agenda item B.1.5.)

PROPOSAL FOR DRAFT AMENDMENTS TO UNECE REGULATION No. 44/04

**Problem:** Conformity of Production (COP) as batch control in Annex 16.

Paragraph 2.2.1.4. offers the 2 configurations MH (more hard) and LH (less hard) to be tested during COP-testing in batch control. In reality the differentiation between a MH and a LH configuration is difficult because displacement or chest acceleration may be critical (MH) but mostly not both together. Also the 2 parameters are often not both together optimal (LH).

**Solution:** Draft amendment in ECE-R44/04, Annex 16, paragraph 2.2.1.4., Note:

LH signifies **a** less hard configuration. (Insert the **a** and delete the sentence originally behind this definition: the best results obtained in approval or extension of approval).
