ECONOMIC COMMISSION FOR EUROPE
INLAND TRANSPORT COMMITTEE
World Forum for Harmonization of Vehicle Regulations
Working Party on Lighting and Light-Signalling

Sixtieth session
Geneva, 1 - 3 October 2008
Item 10(c) of the provisional agenda

REGULATION No. 53
(Installation of lighting and light-signalling devices for L₃ category vehicles)

Installation of daytime running lamps (DRL)

Proposal for draft Supplement 11 to the 01 series of amendments to Regulation No. 53

Submitted by the expert from Germany */

Amendments proposed by IMMA

The text reproduced below was prepared by the expert from Germany proposing to allow the installation of daytime running lamps (DRL), approved according to Regulation No. 87, on L₃ category vehicles. This proposal is a revision of ECE/TRANS/WP.29/GRE/2007/9 introduced during the fifty-seventh session of the Working Party on Lighting and Light-Signalling (GRE). The modifications to the current text of the Regulation (including Supplement 9 to the 01 series of amendments to the Regulation) are marked in bold characters.

*/ In accordance with the programme of work of the Inland Transport Committee for 2006-2010 (ECE/TRANS/166/Add.1, programme activity 02.4), the World Forum will develop, harmonize and update Regulations in order to enhance performance of vehicles. The present document is submitted in conformity with that mandate.

GE.08-
A. PROPOSAL

Insert a new paragraph 2.5.17., to read:

"2.5.17. "Daytime running lamp" means a lamp facing in a forward direction used to make the vehicle more easily visible when driving during daytime."

Paragraph 5.11.1., amend to read:

"5.11.1. If installed, the daytime running lamp shall automatically be ON when the engine is running. If no daytime running lamp is installed, the headlamp shall automatically be on when the engine is running."

Paragraph 5.13., amend to read:

"5.13. Colours of the lights

.....
front fog lamp: white or selective yellow
rear fog lamp: red
daytime running lamp: white"

Insert new paragraphs 6.13. to 6.13.8., to read:

"6.13. DAYTIME RUNNING LAMP

6.13.1. Presence

Optional for motorcycles.

6.13.2. Number

One or two of approved type according to Regulation No. 87.

6.13.3. Arrangement

No special requirement.

6.13.4. Position

6.13.4.1. In width:

6.13.4.1.1. An independent daytime running lamp may be installed above, below or to one side of another front lamp: If these lamps are one above the other the reference centre of the daytime running lamp shall be located within the medium longitudinal plane of the vehicle; if these lamps are
side by side the edge of the illuminating surface shall not more than 250 mm from the median longitudinal plane of the vehicle.

6.13.4.1.2. A daytime running lamp, that is reciprocally incorporated with another front lamp (driving beam headlamp or front position lamp), shall be fitted in such a way that the edge of the illuminated surface lies not more than 250 mm from the median longitudinal plane of the vehicle.

6.13.4.1.3. Two daytime running lamps, of which either one or both are reciprocally incorporated with another front lamp, shall be installed in such a way that their reference centres are symmetrical in relation to the median longitudinal plane of the vehicle.

6.13.4.2. In height:
Above the ground not less than 250 mm and not more than 1,500 mm.

6.13.4.3. In length:
At the front of the vehicle.

6.13.4.4. In the case of two daytime running lamps, the distance separating the illuminating surfaces shall not exceed 650 mm.

6.13.5. Geometric visibility

Horizontal: outwards 20° and inwards 10°.

Vertical: upwards 10° and downwards 5°.

6.13.6. Orientation

Towards the front. The lamp(s) may move in line with the steering angle.

6.13.7. Electrical connections

6.13.7.1. If installed, the daytime running lamp shall be switched ON automatically when the device, which starts and/or stops the engine, is in a position which makes it possible for the engine to operate.

The daytime running lamp shall switch OFF automatically when the headlamps are switched ON, except when the latter are used to give intermittent luminous warnings at short intervals.

Furthermore, the lamps referred to in paragraph 5.10. shall not be switched ON when the daytime running lamps are switched ON.
6.13.7.2. If the distance between the front direction-indicator lamp and the daytime running lamp is equal or less than 40 mm, the electrical connections of the daytime running lamp on the relevant side of the vehicle may be such that either
(a) it is switched OFF or
(b) its luminous intensity is reduced during the entire period (both ON and OFF cycle) of activation of a front direction-indicator lamp.

6.13.7.3. If a direction indicator lamp is reciprocally incorporated with a daytime running lamp, the electrical connections of the daytime running lamp on the relevant side of the vehicle shall be such that the daytime running lamp is switched OFF during the entire period (both ON and OFF cycle) of activation of the direction-indicator lamp.

6.13.8. **Tell-tale**

Closed-circuit tell-tale optional.

B. **JUSTIFICATION**

In accordance with the enforcement legislation of many countries, vehicles of category L must drive with the passing beam headlamps switched on. Germany sees an improvement for road safety by replacing the passing beam function by daytime running lamps. This will increase the vehicle visibility and will be favourable for the lifetime of the light sources used in passing beam headlamps. Latest research into conspicuity of motorcycles has shown that under daytime conditions an improved perception of such vehicles equipped with daytime running lamps will also be provided. An abstract of the latest research results will be presented in a separate document.

---

The minimum height of 250 mm is the same as that for front fog lamps
The separation distances from the longitudinal median plane are taken from the fog lamp requirements
