WP = Working Pressure (ISO terminology)
NWP = Nominal Working Pressure (SAE/EC regulation terminology)

NFC = Number of nominal filling cycles
for ISO the Nominal Filling cycle are: for heavy duty 11250, may be reduced to 5500
for SAE the Durability test cycles are: 3XL/R, but not less that 5500 (heavy duty 11250)
L = vehicle lifetime mileage
R = vehicle range
EC regulation are at moment discussing NFC values.
JARI does not fix a nominal number of cycles.
