Proposal for the 04 series of amendments to Regulation No. 10 (Electromagnetic compatibility) submitted by the Working Party on Lighting and Light-Signalling (GRE)*

The text reproduced below was adopted by the Working Party on Lighting and Light-Signalling (GRE) at its sixty-fourth session. It is based on ECE/TRANS/WP.29/GRE/2010/54 as amended by Annex VII to the report. It is submitted to the World Forum for Harmonization of Vehicle Regulations (WP.29) and to the Administrative Committee (AC.1) for consideration (ECE/TRANS/WP.29/GRE/64, para. 26).

*In accordance with the programme of work of the Inland Transport Committee for 2006–2010 (ECE/TRANS/166/Add.1, programme activity 02.4), the World Forum will develop, harmonize and update Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.
Paragraph 6, amend to read:

"6. Specifications in the configurations other than "RESS charging mode coupled to the power grid" .........................................................."

Insert a new paragraph 7, to read:

"7. Additional specifications in the configuration "RESS charging mode coupled to the power grid" .........................................................."

Paragraphs 7 to 13, renumber as paragraphs 8 to 14

"8. Amendment or extension of a vehicle type approval following electrical/electronic sub-assembly (ESA) addition or substitution ............
9. Conformity of production ...........................................................................
10. Penalties for non-conformity of production ................................................
11. Production definitely discontinued .............................................................
12. Modification and extension of type approval of a vehicle or ESA ............
13. Transitional provisions ..............................................................................
14. Names and addresses of Technical Services conducting approval tests, and of Administrative Departments ........................................."

Annexes, insert new Annexes 11 to 16, to read:

"Annexes

... 
11. Method(s) of testing for emission of transients of harmonics generated on AC power lines from vehicle
12. Method(s) of testing for emission of voltage changes, voltage fluctuations and flicker on AC power lines from vehicle
13. Method(s) of testing for emission of radiofrequency conducted disturbances on AC or DC power lines from vehicle
14. Method(s) of testing for emission of radiofrequency conducted disturbances on network and telecommunication access from vehicle
15. Method(s) of testing for immunity of vehicles to electrical fast transient / burst disturbances conducted along AC and DC power lines
16. Method(s) of testing for immunity of vehicles to surges conducted along AC and DC power lines"
Paragraphs 1.2. and 1.3., amend to read:

"1.2. Components and separate technical units intended to be fitted in these vehicles with the limitation given in paragraph 3.2.1. with regard to electromagnetic compatibility.

1.3. It covers:

(a) requirements regarding the immunity to radiated and conducted disturbances for functions related to direct control of the vehicle, related to driver, passenger and other road users' protection, related to disturbances, which would cause confusion to the driver or other road users, related to vehicle data bus functionality, related to disturbances, which would affect vehicle statutory data;

(b) requirements regarding the control of unwanted radiated and conducted emissions to protect the intended use of electrical or electronic equipment at own or adjacent vehicles or nearby, and the control of disturbances from accessories that may be retrofitted to the vehicle.

(c) additional requirements for vehicles providing coupling systems for charging the RESS regarding the control of emissions and immunity from this connection between vehicle and power grid."

Paragraphs 2.5. and 2.6., amend to read:

"2.5. "Broadband emission" means an emission, which has a bandwidth greater than that of a particular measuring apparatus or receiver (International Special Committee on Radio Interference (CISPR) 25, second edition 2002 and corrigendum 2004).

2.6. "Narrowband emission" means an emission which has a bandwidth less than that of a particular measuring apparatus or receiver (CISPR 25, second edition 2002 and corrigendum 2004)."

Paragraph 2.7., amend to read:

"2.7. "Electrical/electronic system" means (an) electrical and/or electronic device(s) or set(s) of devices together with any associated electrical connections which form part of a vehicle but which are not intended to be type approved separately from the vehicle. Both RESS and Coupling system for charging the RESS are considered electrical/electronic systems."

Paragraph 2.12., amend to read:

"2.12. "Immunity related functions" are:

(a) Functions related to the direct control of the vehicle:

(i) by degradation or change in: e.g. engine, gear, brake, suspension, active steering, speed limitation devices;
(ii) by affecting drivers position: e.g. seat or steering wheel positioning;
(iii) by affecting driver's visibility: e.g. dipped beam, windscreen wiper.

(f) Function related to the RESS in charging mode coupled to the power grid:
(i) by leading to unexpected vehicle motion."

*Insert new paragraphs 2.13. and 2.14.*, to read:

"2.13. "RESS" means the rechargeable energy storage system that provides electric energy for electric propulsion of the vehicle.

2.14. "Coupling system for charging the RESS" means the electrical circuit installed in the vehicle used for charging the RESS."

*Paragraph 3.1.3.*, amend to read:

"3.1.3. The vehicle manufacturer shall draw up a schedule describing all relevant vehicle electrical/electronic systems or ESAs, body styles, variations in body material, general wiring arrangements, engine variations, left-hand/right-hand drive versions and wheelbase versions. Relevant vehicle electrical/electronic systems or ESAs are those which may emit significant broadband or narrowband radiation and/or those which are involved in immunity related functions of the vehicle (see paragraph 2.12.) and those which provide coupling systems for charging the RESS."

*Insert a new paragraph 3.1.9.*, to read:

"3.1.9. Vehicle type approval shall be applied for both RESS and Coupling system for charging the RESS as they are considered as electrical / electronic systems."

*Paragraph 5.1.*, amend to read:

"5.1. An approval number shall be assigned to each vehicle or ESA type approved. The first two digits of this number shall indicate the series of amendments corresponding to the most recent essential technical amendments made to the Regulation at the date of approval. A Contracting Party may not assign the same approval number to another type of vehicle or ESA."

*Paragraph 6.*, amend to read:

"6. Specifications in configurations other than "RESS charging mode coupled to the power grid.""

*Paragraph 6.4.2.2.*, amend to read:

"6.4.2.2. The vehicle representative of its type shall be considered as complying with immunity requirements if, during the tests performed in accordance with Annex 6, there shall be no degradation of performance of "immunity related functions", according to paragraph 2.1. of Annex 6."

*Paragraph 6.2.7.1.*, amend to read:

"6.7.2.1. If tests are made using the methods described in Annex 9, the immunity test levels shall be 60 volts/m root-mean-square (rms) for the 150 mm stripline testing method, 15 volts/m rms for the 800 mm stripline testing method, 75 volts/m rms for the Transverse Electromagnetic Mode (TEM) cell testing method, 60 mA rms for the bulk current injection (BCI) testing method and 30 volts/m rms for the free field testing method in over 90 per cent of the 20 to 2,000 MHz frequency band, and to a minimum of 50 volts/m rms for the 150 mm stripline testing method, 12.5 volts/m rms for the 800 mm stripline testing method, 62.5 volts/m rms, for the TEM cell testing method, 50 mA rms for the bulk current injection (BCI) testing
method and 25 volts/m rms for the free field testing method over the whole 20 to 2,000 MHz frequency band.”

Paragraph 6.8., amend to read:

"6.8. Specifications concerning the immunity of ESAs to transient disturbances conducted along supply lines.

6.8.1. Method of testing

The immunity of ESA representative of its type shall be tested by the method(s) according to ISO 7637-2 (second edition 2004 and Amd1:2008) as described in Annex 10 with the test levels given in table 1."

Paragraph 6.9., amend to read:

"6.9. Specifications concerning the emission of transient conducted disturbances generated by ESAs on supply lines.

6.9.1. Method of testing

The emission of ESA representative of its type shall be tested by the method(s) according to ISO 7637-2 (second edition 2004 and Amd1:2008) as described in Annex 10 for the levels given in table 2."
The electromagnetic radiation generated by the vehicle representative of its type shall be measured using the method described in Annex 4. The method of measurement shall be defined by the vehicle manufacturer in accordance with the Technical Service.

7.2.2. Vehicle broadband type approval limits

7.2.2.1. If measurements are made using the method described in Annex 4 using a vehicle-to-antenna spacing of 10.0 ± 0.2 m, the limits shall be 32 dB microvolts/m in the 30 to 75 MHz frequency band and 32 to 43 dB microvolts/m in the 75 to 400 MHz frequency band, this limit increasing logarithmically with frequencies above 75 MHz as shown in Appendix 2. In the 400 to 1,000 MHz frequency band the limit remains constant at 43 dB microvolts/m.

7.2.2.2. If measurements are made using the method described in Annex 4 using a vehicle-to-antenna spacing of 3.0 ± 0.05 m, the limits shall be 42 dB microvolts/m in the 30 to 75 MHz frequency band and 42 to 53 dB microvolts/m in the 75 to 400 MHz frequency band, this limit increasing logarithmically with frequencies above 75 MHz as shown in Appendix 3. In the 400 to 1,000 MHz frequency band the limit remains constant at 53 dB microvolts/m.

On the vehicle representative of its type, the measured values, expressed in dB microvolts/m shall be below the type approval limits.

7.3. Specifications concerning emission of harmonics on AC power lines from vehicles

7.3.1. Method of measurement

The harmonics emission on AC power lines generated by the vehicle representative of its type shall be measured using the method described in Annex 11. The method of measurement shall be defined by the vehicle manufacturer in accordance with the Technical Service.
7.3.2. Vehicle type approval limit

7.3.2.1. If measurements are made using the method described in Annex 11, the limits for input current ≤ 16 A per phase are those defined in IEC 61000-3-2 (edition 3.2 – 2005 + Amd1:2008 + Amd2:2009) and given in table 3.

Table 3
Maximum allowed harmonics (input current ≤ 16 A per phase)

Relative values of even harmonics lower or equal to 12 shall be lower than $16/n$ %. Even harmonics greater than 12 are taken into account in the THD and PWHD the same way than odd harmonics.

7.4. Specifications concerning emission of voltage changes, voltage fluctuations and flicker on AC power lines from vehicles.

7.4.1. Method of measurement

The emission of voltage changes, voltage fluctuations and flicker on AC power lines generated by the vehicle representative of its type shall be measured using the method described in Annex 12. The method of measurement shall be defined by the vehicle manufacturer in accordance with the Technical Service.

7.4.2. Vehicle type approval limit

7.4.2.1. If measurements are made using the method described in Annex 12, the limits for rated current ≤ 16 A per phase and not subjected to conditional connection are those defined in IEC 61000-3-3 (edition 2.0 - 2008) and given in table 7.

7.5. Specifications concerning emission of radiofrequency conducted disturbances on AC or DC power lines from vehicles

7.5.1. Method of measurement

The emission of radiofrequency conducted disturbances on AC or DC power lines generated by the vehicle representative of its type shall be measured using the method described in Annex 13. The method of measurement shall be defined by the vehicle manufacturer in accordance with the Technical Service.

7.5.2. Vehicle type approval limit

7.5.2.1. If measurements are made using the method described in Annex 13, the limits on AC power lines are those defined in IEC 61000-6-3 (edition 2.0 – 2006) and given in table 9.

7.6. Specifications concerning emission of radiofrequency conducted disturbances on network and telecommunication access from vehicles

7.6.1. Method of measurement

The emission of radiofrequency conducted disturbances on network and telecommunication access generated by the vehicle representative of its type shall be measured using the method described in Annex 14. The method of measurement shall be defined by the vehicle manufacturer in accordance with the Technical Service.

7.6.2. Vehicle type approval limit

7.6.2.1. If measurements are made using the method described in Annex 14, the limits on network and telecommunication access are those defined in IEC 61000-6-3 (edition 2.0 - 2006) and given in Table 11.

7.7. Specifications concerning immunity of vehicles to electromagnetic radiation

7.7.1. Method of testing

The immunity to electromagnetic radiation of the vehicle representative of its type shall be tested by the method described in Annex 6.

7.7.2. Vehicle immunity type approval limits

7.7.2.1. If tests are made using the method described in Annex 6, the field strength shall be 30 volts/m rms (root mean squared) in over 90 per cent of the 20 to 2,000 MHz frequency band and a minimum of 25 volts/m rms over the whole 20 to 2,000 MHz frequency band.

7.7.2.2. The vehicle representative of its type shall be considered as complying with immunity requirements if, during the tests performed in accordance with Annex 6, there shall be no degradation of performance of "immunity related functions", according to paragraph 2.2. of Annex 6.

7.8. Specifications concerning the immunity of vehicles to electrical fast transient/burst disturbances conducted along AC and DC power lines.

7.8.1. Method of testing

7.8.1.1. The immunity to electrical fast transient/burst disturbances conducted along AC and DC power lines of the vehicle representative of its type shall be tested by the method described in Annex 15.

7.8.2. Vehicle immunity type approval limits
7.8.2.1. If tests are made using the methods described in Annex 15, the immunity test levels, for AC or DC power lines, shall be: ± 2 kV test voltage in open circuit, with a rise time (Tr) of 5 ns, and a hold time (Th) of 50 ns and a repetition rate of 5 kHz for at least 1 minute.

7.8.2.2. The vehicle representative of its type shall be considered as complying with immunity requirements if, during the tests performed in accordance with Annex 15, there shall be no degradation of performance of "immunity related functions", according to paragraph 2.2. of Annex 6.

7.9. Specifications concerning the immunity of vehicles to surge conducted along AC or DC power lines.

7.9.1. Method of testing

7.9.1.1. The immunity to surge conducted along AC / DC power lines of the vehicle representative of its type shall be tested by the method described in Annex 16.

7.9.2. Vehicle immunity type approval limits

7.9.2.1. If tests are made using the methods described in Annex 16, the immunity test levels shall be:

(a) for AC power lines: ± 2 kV test voltage in open circuit between line and earth and ± 1 kV between lines, with a rise time (Tr) of 1.2 µs, and a hold time (Th) of 50 µs. Each surge shall be applied 5 times at 1 minute delay for each of following phases: 0, 90, 180 and 270°,

(b) for DC power lines: ± 0.5 kV test voltage in open circuit between line and earth and ± 0.5 kV between lines, with a rise time (Tr) of 1.2 µs, and a hold time (Th) of 50 µs. Each surge shall be applied 5 times at 1 minute delay.

7.9.2.2. The vehicle representative of its type shall be considered as complying with immunity requirements if, during the tests performed in accordance with Annex 16, there shall be no degradation of performance of "immunity related functions", according to paragraph 2.2. of Annex 6.

7.10. Exceptions

7.10.1. When network and telecommunication access of the vehicle uses power line Transmission (PLT) on its AC/DC power lines, annex 14 shall not be applied.

Paragraph 7. to 8.3. (former), renumbered as paragraph 8. to 9.3.

Paragraphs 8.3.1. and 8.3.2.(former), renumbered as paragraphs 9.3.1. and 9.3.2. and amend to read:

"9.3.1. When the conformity of a vehicle, component or ESA taken from the series is being verified, production shall be deemed to conform to the requirements of this Regulation in relation to broadband electromagnetic disturbances and narrowband electromagnetic disturbances if the levels measured do not exceed by more the 2 dB (25 per cent) the reference limits prescribed in paragraphs 6.2.2.1., 6.2.2.2., 6.3.2.1., 6.3.2.2., 7.2.2.1. and 7.2.2.2. (as appropriate).

9.3.2. When the conformity of a vehicle, component or ESA taken from the series is being verified, production shall be deemed to conform to the requirements of
this Regulation in relation to immunity to electromagnetic radiation if the vehicle ESA does not exhibit any degradation relating to the direct control of the vehicle which could be observed by the driver or other road user when the vehicle is in the state defined in Annex 6, para. 4, and is subjected to a field strength, expressed in Volts/m, up to 80 per cent of the reference limits prescribed in paragraphs 6.4.2.1. and 7.7.2.1. above."

Insert new paragraphs 13.5. to 13.8., to read:

"13.5. As from [36] months after the official date of entry into force of this Regulation, as amended by the 04 series of amendments, Contracting Parties applying this Regulation shall grant approvals only if the vehicle type, to be approved meets the requirements of this Regulation as amended by the 04 series of amendments.

13.6. Until [36] months after the date of entry into force of the 04 series of amendments, no Contracting Parties shall refuse national or regional approval of a vehicle approved to the preceding series of amendments to this Regulation.

13.7. as from [60], Contracting Parties may refuse first registration of a new vehicle which does not meet the requirements of the 04 series of amendments to this Regulation.

13.8. Notwithstanding paragraphs 13.6 and 13.7 approvals of vehicle granted to the preceding series of amendments to the Regulation, which are not affected by the 04 series of amendments, shall remain valid and Contracting Parties applying the Regulation shall continue to accept them."

Appendix 1,
paragraphs 1. to 9., amend to read:

7. ISO 11451 "Road vehicles - Electrical disturbances by narrowband radiated electromagnetic energy - Vehicle test methods";
Part 1: General and definitions (ISO 11451-1, third edition 2005 and Amd1:2008);
Part 2: Off-vehicle radiation source (ISO 11451-2, third edition 2005);

8. ISO 11452 "Road vehicles - Electrical disturbances by narrowband radiated electromagnetic energy - Component test methods”:
Part 1: General and definitions (ISO 11452-1, third edition 2005 and Amd1:2008);
Part 2: Absorber-lined chamber (ISO 11452-2, second edition 2004);
Part 3: Transverse electromagnetic mode (TEM) cell (ISO 11452-3, third edition 2001);
Part 4: Bulk current injection (BCI) (ISO 11452-4, third edition 2005 and Corrigendum 1:2009);

Insert new items 10. to 20., to read:

11. IEC 61000-3-3 "Electromagnetic Compatibility (EMC) – Part 3-3 – Limits – Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage systems for equipment with rated current \( \leq 16 \) A per phase and not subjected to conditional connection”, edition 2.0 - 2008.

12. IEC 61000-3-11 "Electromagnetic Compatibility (EMC) – Part 3-11 – Limits – Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage systems - Equipment with rated current \( \leq 75 \) A per phase and subjected to conditional connection”, edition 1.0 - 2000.

13. IEC 61000-3-12 "Electromagnetic Compatibility (EMC) – Part 3-12 – Limits for harmonic current emissions produced by equipment connected to public low-voltage systems with input current \( > 16 \) A and \( \leq 75 \) A per phase”, edition 1.0 - 2004.

Annex 1, amend to read:

"Examples of Approval Marks

Model A

(See paragraph 5.2. of this Regulation)

The above approval mark affixed to a vehicle or ESA shows that the vehicle type concerned has, with regard to electromagnetic compatibility, been approved in the Netherlands (E 4) pursuant to Regulation No. 10 under approval No. 042439. The approval number indicates that the approval was granted according to the requirements of Regulation No. 10 as amended by the 04 series of amendments.

Model B

(See paragraph 5.2. of this Regulation)

The above approval mark affixed to a vehicle or ESA shows that the vehicle type concerned has, with regard to electromagnetic compatibility, been approved in the Netherlands (E 4) pursuant to Regulations Nos. 10 and 33. *

* The second number is given merely as an example.
The approval numbers indicate that, at the date when the respective approvals were given, Regulation No. 10 included the 04 series of amendments and Regulation No. 33 was still in its original form.

Annex 2A, insert new items 65. to 69., to read:

"65. Charger: on board/ external/ without 1; .................................................................
66. Charging current: direct current/ alternating current (number of phases / frequency) 1; ...........................................................................................................
67. Maximal nominal current (in each mode if necessary):
68. Nominal charging voltage: ......................................................................................
69. Basic vehicle interface functions: ex: L1/L2/L3/N/E/control pilot: ........................."

Annex 3A,
Item 2, amend to read:

"2. Type: ....................................................................................................................."

Appendix to type-approval communication,
Item 2, shall be deleted
Items 3 to 7, renumbered as items 2 to 6.

Annex 4
Paragraph 1.1., amend to read:

"1.1. The test method described in this annex shall only be applied to vehicles. This method concerns both configurations of the vehicle:
   (a) other than "RESS in charging mode coupled to the power grid".
   (b) "RESS in charging mode coupled to the power grid"."

Paragraph 1.2., amend to read:

"1.2. Test method

This test is intended to measure the broadband emissions generated by electrical or electronic systems fitted to the vehicle (e.g. ignition system or electric motors).

If not otherwise stated in this annex the test shall be performed according to CISPR 12 (fifth edition 2001 and Amd1:2005)."

Insert a new paragraph 2.1., to read:

"2.1. Vehicle in configuration other than "RESS in charging mode coupled to the power grid."
Paragraphs 2.1. and 2.2: renumbered as paragraphs 2.1.1. and 2.1.2., to read:

"2.1.1. Engine.

The engine shall be in operation according to CISPR 12 (fifth edition 2001 and Amd1:2005)

2.1.2. Other vehicle systems…"

Insert a new paragraph 2.2., to read:

"2.2. Vehicle in configuration "RESS in charging mode coupled to the power grid".

This vehicle shall be in battery charging mode at rated power until the AC or DC current reached at least 80 per cent of its initial value. The test set-up for the connection of the vehicle in configuration "RESS in charging mode coupled to the power grid" is shown in figure 3 of Appendix 1 to this annex."

Paragraph 3.1., amend to read:

"3.1. As an alternative to the requirements of CISPR 12 (fifth edition 2001 and Amd1:2005) for vehicles of category L the test surface may be any location that fulfils the conditions shown in the figure 1 in the appendix to this annex. In this case the measuring equipment must lie outside the part shown in the figure 1 of Appendix 1 to this annex."

Paragraph 4.2., amend to read:

"4.2. Measurements can be performed with either quasi-peak or peak detectors. The limits given in paragraphs 6.2. and 6.5. of this Regulation are for quasi-peak detectors. If peak detectors are used a correction factor of 20 dB as defined in CISPR 12 (fifth edition 2001 and Amd1:2005) shall be applied."

Paragraph 4.3., amend to read:

"4.3. Measurements

The Technical Service shall perform the test at the intervals specified in the CISPR 12 (fifth edition 2001 and Amd1:2005) standard throughout the frequency range 30 to 1,000 MHz.

Alternatively, if the manufacturer provides measurement data for the whole frequency band from a test laboratory accredited to the applicable parts of ISO 17025 (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may divide the frequency range in 14 frequency bands 30 – 34, 34 – 45, 45 – 60, 60 – 80, 80 – 100, 100 – 130, 130 – 170, 170 – 225, 225 – 300, 300–400, 400 – 525, 525 – 700, 700 – 850, 850 – 1,000 MHz and perform tests at the 14 frequencies giving the highest emission levels within each band to confirm that the vehicle meets the requirements of this annex.

..."

Annex 5,

Paragraph 1.1., amend to read:

"1.1. The test method described in this annex shall only be applied to vehicles. This method concerns only the configuration of the vehicle other than "RESS in charging mode coupled to the power grid."

Paragraph 1.2., amend to read:

"1.2. Test method

This test is intended to measure the narrowband electromagnetic emissions such as might emanate from microprocessor-based systems or other narrowband source.

If not otherwise stated in this annex the test shall be performed according to CISPR 12 (fifth edition 2001 and Amd1:2005) or to CISPR 25 (and corrigendum 2004)."

Paragraph 3.3., amend to read:

"3.3. Measurements

The Technical Service shall perform the test at the intervals specified in the CISPR 12 (fifth edition 2001 and Amd1:2005) standard throughout the frequency range 30 to 1,000 MHz.

Alternatively, if the manufacturer provides measurement data for the whole frequency band from a test laboratory accredited to the applicable parts of ISO 17025 (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may divide the frequency range in 14 frequency bands 30 – 34, 34 – 45, 45 – 60, 60 – 80, 80 – 100, 100 – 130, 130 – 170, 170 – 225, 225 – 300, 300– 400, 400 – 525, 525 – 700, 700 – 850, 850 – 1,000 MHz and perform tests at the 14 frequencies giving the highest emission levels within each band to confirm that the vehicle meets the requirements of this annex.

…"

Annex 6,

Paragraph 1.1., amend to read:

"1.1. The test method described in this annex shall only be applied to vehicles. This method concerns both configurations of vehicle:

(a) other than "RESS in charging mode coupled to the power grid".

(b) "RESS in charging mode coupled to the power grid"."

Paragraph 2.1., amend to read:

"2.1. Vehicle in configuration other than "RESS in charging mode coupled to the power grid"."

Paragraph 2.1. (former), renumber as paragraph to 2.1.1.

Paragraphs 2.1.1. to 2.1.4. (former), renumbered as paragraphs 2.1.1.1. to 2.1.1.4.

Paragraphs 2.2. to 2.3. (former), renumber as 2.1.2. to 2.1.3., respectively
Insert new paragraphs 2.2. to 2.2.2., to read:

"2.2. Vehicle in configuration "RESS in charging mode coupled to the power grid".

2.2.1. The vehicle shall be in an unladen condition except for necessary test equipment.

2.2.1.1. The vehicle shall be immobilized, engine OFF and in charging mode.

2.2.1.2. Basic vehicle conditions

The paragraph defines minimum test conditions (as far as applicable) and failures criteria for vehicle immunity tests. Other vehicle systems, which can affect immunity related functions, must be tested in a way to be agreed between manufacturer and Technical Service.

"3.1. The test shall be performed according CISPR 25 (second edition 2002 and corrigendum 2004) clause 6.4. - ALSE method."

Paragraph 3.2., amend to read:

"3.2. ... As an alternative to an absorber lined shielded enclosure (ALSE) an open area test site (OATS) which complies with the requirements of CISPR 16-1-4 (third edition 2010) may be used (see appendix to Annex 7)."

Paragraph 4.3., amend to read:

"4.3. Measurements

The Technical Service shall perform the test at the intervals specified in the CISPR 12 (fifth edition 2001 and Amd1:2005) standard throughout the frequency range 30 to 1,000 MHz.

Alternatively, if the manufacturer provides measurement to data for the whole frequency band from a test laboratory accredited to the applicable parts of ISO 17025 (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may divide the frequency range in 14 frequency bands 30 – 34, 34 – 45, 45 – 60, 60 – 80, 80 – 100, 100 – 130, 130 – 170, 170 – 225, 225 – 300, 300– 400, 400 – 525, 525 – 700, 700 – 850, 850 – 1,000 MHz and perform tests at the 14 frequencies giving the highest emission levels within each band to confirm that the ESA meets the requirements of this annex. In the event that the limit is exceeded during the
test, investigations shall be made to ensure that this is due to the ESA and not to background radiation including broadband radiation from the ESA.”

Paragraph 4.4., amend to read:
"4.4. Readings
The maximum of the readings relative to the limit (horizontal/vertical polarisation) in each of the 14 frequency bands shall be taken as the characteristic reading at the frequency at which the measurements were made.”

Annex 9,

Paragraph 1.2.1., amend to read:
"1.2.1. …
(c) Bulk current injection testing according ISO 11452-4, third edition 2005 and Corrigendum 1:2009;
(d) Stripline testing according ISO 11452-5, second edition 2002;
(e) 800 mm stripline according paragraph 5. of this annex.

(Frequency range and general test conditions shall be based on ISO 11452-1, third edition 2005 and Amd1:2008).”

Paragraph 2.1., amend to read:
"2.1. The test conditions shall be according ISO 11452-1, third edition 2005 and Amd1:2008.”

Paragraph 3.1., amend to read:
"3.1. Frequency range, dwell times
Measurements shall be made in the 20 to 2,000 MHz frequency range with frequency steps according to ISO 11452-1, third edition 2005 and Amd1:2008.
The test signal modulation shall be:
(a) …

(b) …

if not otherwise agreed between Technical Service and ESA manufacturer.
Frequency step size and dwell time shall be chosen according to ISO 11452-1, third edition 2005 and Amd1:2008.”

Paragraph 3.2., amend to read:
"3.2. The Technical Service shall perform the test at the intervals specified in ISO 11452-1, third edition 2005 and Amd1:2008 throughout the frequency range 20 to 2,000 MHz.
Alternatively, if the manufacturer provides measurement to data for the whole frequency band from a test laboratory accredited to the applicable parts
of ISO 17025, (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may choose a reduced number of spot frequencies in the range, e.g. 27, 45, 65, 90, 120, 150, 190, 230, 280, 380, 450, 600, 750, 900, 1,300, and 1,800 MHz to confirm that the ESA meets the requirements of this annex.”

Paragraph 4.3.2., amend to read:

"4.3.2. Test methodology

The test shall be performed according to ISO 11452-4, third edition 2005 and Corrigendum 1:2009 on a test bench. As an alternative the ESA may be tested while installed in the vehicle according to ISO 11451-4 (first edition 1995) with the following characteristics:

…”

Annex 10,
Paragraph 2, amend to read:

"2. IMMUNITY AGAINST TRANSIENT DISTURBANCES CONDUCTED ALONG SUPPLY LINES

Apply the test pulses 1, 2a, 2b, 3a 3b and 4 according to the International Standard ISO 7637-2, (second edition 2004 and Amd1:2008) to the supply lines as well as to other connections of ESAs which may be operationally connected to supply lines.”

Paragraph 3, amend to read:

"3. EMISSION OF TRANSIENT CONDUCTED DISTURBANCES GENERATED BY ESAS ON SUPPLY LINES

Measurement according to the International Standard ISO 7637-2 (second edition 2004 and Amd1:2008) on supply lines as well as to other connections of ESAs which may be operationally connected to supply lines.”

"Annex 11

Method(S) of Testing for Emission of Harmonics generated on AC power lines from vehicle

1. General

1.1. The test method described in this annex shall be applied to vehicles in configuration "RESS charging mode coupled to the power grid"

1.2. Test method

This test is intended to measure the level of harmonics generated by vehicle in configuration "RESS charging mode coupled to the power grid" through its AC power lines in order to ensure it is compatible with residential, commercial and light industrial environments.

If not otherwise stated in this annex the test shall be performed according to:
(a) IEC 61000-3-2 (edition 3.2 – 2005 +Amd1:2008+Amd2:2009) for input current in charging mode \( \leq 16 \text{ A per phase for class A equipment,} \)

(b) IEC 61000-3-12 (edition 1.0 - 2004) for input current in charging mode \( > 16 \text{ A and } \leq 75 \text{ A per phase.} \)

2. Vehicle State during Tests

2.1. The vehicle shall be in configuration "RESS charging mode coupled to the power grid" at rated power until the AC current reached at least 80 per cent of its initial value.

3. Test Arrangements

3.1. The observation time to be used for the measurements shall be as for quasi-stationary equipment as defined in IEC 61000-3-2 (edition 3.2 – 2005 +Amd1:2008+Amd2:2009) table 4.

3.2. The test set-up for single phase vehicle in configuration "RESS charging mode coupled to the power grid" is shown in figure 1 of Appendix 1 to this annex.

3.3. The test set-up for three-phase vehicle in configuration "RESS charging mode coupled to the power grid" is shown in figure 2 of Appendix 1 to this annex.

4. Test Requirements

4.1. The measurements of even and odd current harmonics shall be performed up to the fortieth harmonic.

4.2. The limits for single phase or three-phase "RESS charging mode coupled to the power grid" with input current \( \leq 16 \text{ A per phase} \) are given in paragraph 7.3.2.1. table 3.

4.3. The limits for single phase "RESS charging mode coupled to the power grid" with input current \( > 16 \text{ A and } \leq 75 \text{ A per phase} \) are given in paragraph 7.3.2.2. table 4.

4.4. The limits for three-phase "RESS charging mode coupled to the power grid" with input current \( > 16 \text{ A and } \leq 75 \text{ A per phase} \) are given in paragraph 7.3.2.2. table 5.

4.5. For three-phase "RESS charging mode coupled to the power grid" with input current \( > 16 \text{ A and } \leq 75 \text{ A per phase, when at least one of the three conditions a), b), c) described in IEC 61000-3-12 (edition 1.0 - 2004) clause 5.2, is fulfilled then the limits given in paragraph 7.3.2.2. table 6 can be applied.\)

Annex 12

Method(s) of testing for emission of voltage changes, voltage fluctuations and flicker on AC power lines from vehicle

1. General

1.1. The test method described in this annex shall be applied to vehicles in configuration "RESS charging mode coupled to the power grid"

1.2. Test method

This test is intended to measure the level of voltage changes, voltage fluctuations and flicker generated by vehicle in configuration "RESS charging mode coupled to the power grid" through its AC power lines in order to ensure it is compatible with residential, commercial and light industrial environments.

If not otherwise stated in this annex the test shall be performed according to:

(a) IEC 61000-3-3 (edition 2.0 - 2008) for rated current in "RESS charging mode" \(\leq 16\) A per phase and not subjected to conditional connection,

(b) IEC 61000-3-11 (edition 1.0 - 2000) for rated current in "RESS charging mode" \(> 16\) A and \(\leq 75\) A per phase and subjected to conditional connection.

2. Vehicle State during Tests

2.1. The vehicle shall be in configuration "RESS charging mode coupled to the power grid" at rated power until the AC current reached at least 80 per cent of its initial value.

3. Test Arrangements

3.1. The tests for vehicle in configuration "RESS charging mode coupled to the power grid" with rated current \(\leq 16\) A per phase and not subjected to conditional connection shall be performed according IEC 61000-3-3 (edition 2.0 - 2008) paragraph 4.

3.2. The tests for vehicle in configuration "RESS charging mode coupled to the power grid" with rated current \(> 16\) A and \(\leq 75\) A per phase and subjected to conditional connection shall be performed according IEC 61000-3-11 (edition 1.0 - 2000) paragraph 6.

3.3. The test set-up for vehicle in configuration "RESS charging mode coupled to the power grid" is shown in figure 1 of Appendix 1 to this annex.

4. Test Requirements

4.1. The parameters to be determined in the time-domain are "short duration flicker value", "long duration flicker value" and "voltage relative variation".
4.2. The limits for vehicle in configuration "RESS charging mode coupled to the power grid" with input current $\leq 16$ A per phase and not subjected to conditional connection are given in paragraph 7.4.2.1. table 7.

4.3. The limits for vehicle in configuration "RESS charging mode coupled to the power grid" with input current $> 16$ A and $\leq 75$ A per phase and subjected to conditional connection are given in paragraph 7.4.2.2. table 8.

Method(s) of Testing for Emission of Radiofrequency conducted disturbances on AC or DC power lines from vehicle

1. General
1.1. The test method described in this annex shall be applied to vehicles in configuration "RESS charging mode coupled to the power grid".
1.2. Test method

This test is intended to measure the level of radio frequency conducted disturbances generated by vehicle in configuration "RESS charging mode coupled to the power grid" through its AC or DC power lines in order to ensure it is compatible with residential, commercial and light industrial environments.

If not otherwise stated in this annex the test shall be performed according to CISPR 16-2-1 (edition 2.0 – 2008).

2. Vehicle state during tests
2.1. The vehicle shall be in configuration "RESS charging mode coupled to the power grid" at rated power until the AC or DC current reached at least 80 per cent of its initial value.

3. Test Arrangements
3.1. The test shall be performed according to CISPR 16-2-1 (edition 2.0 – 2008) clause 7.4.1. as floor-standing equipments.
3.2. The artificial mains network to be used for the measurement on vehicle is defined in CISPR 16-1-2 (edition 1.2: 2006), clause 4.3.
3.3. The test set-up for the connection of the vehicle in configuration "RESS charging mode coupled to the power grid" is shown in figure 1 of Appendix 1 to this annex.
3.4. The measurements shall be performed with a spectrum analyser or a scanning receiver. The parameters to be used are respectively defined in CISPR 25 (second edition 2002 and corrigendum 2004) clause 4.5.1 (table 1) and 4.5.2 (table 2).

4. Test Requirements
4.1. The limits apply throughout the frequency range 0,15 to 30 MHz for measurements performed in a semi anechoic chamber or an outdoor test site.
4.2. Measurements shall be performed with average and either quasi-peak or peak detectors. The limits are given in paragraph 7.5. table 9 for AC lines and table 10 for DC lines. If peak detectors are used a correction factor of 20 dB as defined in CISPR 12 (fifth edition, 2001 and Amd1:2005) shall be applied.

Method(s) of Testing for Emission of Radiofrequency conducted disturbances on Network and Telecommunication access from Vehicle

1. General

1.1. The test method described in this annex shall be applied to vehicles in configuration "RESS charging mode coupled to the power grid".

1.2. Test method

This test is intended to measure the level of radio frequency conducted disturbances generated by vehicle in configuration "RESS charging mode coupled to the power grid" through its network and telecommunication access in order to ensure it is compatible with residential, commercial and light industrial environments.

If not otherwise stated in this annex the test shall be performed according to CISPR 22 (edition 6.0 – 2008).

2. Vehicle/ ESA State during Tests

2.1. The vehicle shall be in configuration "RESS charging mode coupled to the power grid" at rated power until the AC or DC current reached at least 80 per cent of its initial value.

3. Test Arrangements

3.1. The test set-up shall be performed according to CISPR 22 (edition 6.0 – 2008) paragraph 5 for conducted emissions.

3.2. The impedance stabilisation to be used for the measurement on vehicle is defined in CISPR 22 (edition 6.0 – 2008) paragraph 9.6.2.

3.3. The test set-up for the connection of the vehicle in configuration "RESS charging mode coupled to the power grid" is shown in figure 1 of Appendix 1 to this annex.

3.4. The measurements shall be performed with a spectrum analyser or a scanning receiver. The parameters to be used are respectively defined in CISPR 25 (second edition 2002 and corrigendum 2004) clause 4.5.1 (table 1) and 4.5.2 (table 2).

4. Test Requirements

4.1. The limits apply throughout the frequency range 0.15 to 30 MHz for measurements performed in a semi anechoic chamber or an outdoor test site.

4.2. Measurements shall be performed with average and either quasi-peak or peak detectors. The limits are given in paragraph 7.6. table 11. If peak detectors are used a correction factor of 20 dB as defined in CISPR 12 (fifth edition 2001 and Amd1:2005) shall be applied.

Method of Testing for immunity of vehicles to electrical fast transient / burst disturbances conducted along AC and DC power lines

1. General

1.1. The test method described in this annex shall only be applied to vehicles. This method concerns only the configuration of the vehicle with "RESS in charging mode coupled to the power grid".

1.2. Test method

This test is intended to demonstrate the immunity of the vehicle electronic systems. The vehicle shall be subject to electrical fast transient/burst disturbances conducted along AC and DC power lines of the vehicle as described in this annex. The vehicle shall be monitored during the tests.

If not otherwise stated in this annex the test shall be performed according to IEC 61000-4-4: 2nd edition 2004.

2. Vehicle state during tests in configuration "RESS in charging mode coupled to the power grid"

2.1. The vehicle shall be in an unladen condition except for necessary test equipment.

2.1.1. The vehicle shall be immobilized, engine OFF and in charging mode.

2.1.2. Basic vehicle conditions

It defines minimum test conditions (as far as applicable) and failures criteria for vehicle immunity tests. Other vehicle systems, which can affect immunity related functions, must be tested in a way to be agreed between manufacturer and Technical Service.

</table>

2.1.3. All other equipment which can be switched on permanently by the driver or passenger should be OFF.

2.2. Only non-perturbing equipment shall be used while monitoring the vehicle. The vehicle exterior and the passenger compartment shall be monitored to determine whether the requirements of this annex are met (e.g. by using (a) video camera(s), a microphone, etc.).

3. Test Equipments

3.1. The test equipments is composed of a reference ground plane (a shielded room is not required), a transient / burst generator, coupling / decoupling network (CDN) and capacitive coupling clamp.

3.3. The coupling / decoupling network shall meet the condition defined in paragraph 6.2. of IEC 61000-4-4: 2nd edition, 2004. When the coupling/decoupling network cannot be used on AC or DC power lines, the capacitive coupling clamp defined in paragraph 6.3. of IEC 61000-4-4: 2nd edition, 2004, can be used.

4. Test Setup

4.1. The vehicle test setup is based on the laboratory type setup as described in paragraph 7.2. of IEC 61000-4-4: 2nd edition, 2004.

4.2. The vehicle shall be placed directly on the ground plane.

4.3. The Technical Service shall perform the test as specified in paragraph 7.7.2.1. Alternatively, if the manufacturer provides measurement from a test laboratory accredited to the applicable parts of ISO 17025 (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may choose not to perform the test to confirm that the vehicle meets the requirements of this annex.

5. Generation of required Test Level

5.1. Test methodology

5.1.1. The test method according to IEC 61000-4-4: 2nd edition, 2004 shall be used to establish the test level requirements.

5.1.2. Test phase

The vehicle shall be positioned on the ground plane. The electrical fast transient / burst (EFT/B) shall be applied on the vehicle on the AC/DC power lines in common modes by using CDN as described in appendix 1, figure 1 of this annex.

The test setup must be noted in the test report.

Method(s) of testing for immunity of vehicles to surges conducted along AC and DC power lines

1. General

1.1. The test method described in this annex shall only be applied to vehicles. This method concerns only the configuration of the vehicle with "RESS in charging mode coupled to the power grid".

1.2. Test method

This test is intended to demonstrate the immunity of the vehicle electronic systems. The vehicle shall be subject to surges conducted along AC and DC power lines of the vehicle as described in this annex. The vehicle shall be monitored during the tests.

If not otherwise stated in this annex the test shall be performed according to IEC 61000-4-5: 2nd edition 2005.

2. Vehicle state during tests in configuration "RESS in charging mode coupled to the power grid"

2.1. The vehicle shall be in an unladen condition except for necessary test equipment.

2.1.1. The vehicle shall be immobilized, engine OFF and in charging mode.

2.1.2. Basic vehicle conditions

It defines minimum test conditions (as far as applicable) and failures criteria for vehicle immunity tests. Other vehicle systems, which can affect immunity related functions, must be tested in a way to be agreed between manufacturer and Technical Service.

2.1.3. All other equipment which can be switched on permanently by the driver or passenger should be OFF.

2.2. Only non-perturbing equipment shall be used while monitoring the vehicle. The vehicle exterior and the passenger compartment shall be monitored to determine whether the requirements of this annex are met (e.g. by using (a) video camera(s), a microphone, etc.).

3. Test Equipments

3.1. The test equipments is composed of a reference ground plane (a shielded room is not required), a surge generator and a coupling / decoupling network (CDN).
3.2. The surge generator shall meet the condition defined in paragraph 6.1 of IEC 61000-4-5: 2nd edition, 2005.

3.3. The coupling / decoupling network shall meet the condition defined in paragraph 6.3. of IEC 61000-4-5: 2nd edition, 2005.

4. Test Setup

4.1. The vehicle test setup is based on the setup described in paragraph 7.2. of IEC 61000-4-5: 2nd edition, 2005.

4.2. The vehicle shall be placed directly on the ground plane.

4.3. The Technical Service shall perform the test as specified in paragraph 7.8.2.1. Alternatively, if the manufacturer provides measurement from a test laboratory accredited to the applicable parts of ISO 17025 (second edition 2005 and Corrigendum:2006) and recognized by the Approval Authority, the Technical Service may choose not to perform the test to confirm that the vehicle meets the requirements of this annex.

5. Generation of required Test Level

5.1. Test methodology

5.1.1. The test method according to IEC 61000-4-5: 2nd edition 2005 shall be used to establish the test level requirements.

5.1.2. Test phase

The vehicle shall be positioned on the ground plane. The electrical surge shall be applied on the vehicle on the AC/DC power lines between each line and earth and between lines by using CDN as described in Appendix 1 to this annex.
