Proposal to amend annex 1, appendix 2, paragraph 4.3.4 (ii)

Transmitted by the United Kingdom

Introduction

1. The second sentence of paragraph 4.3.4 (ii) of annex 1, appendix 2 of the ATP reads as follows:

“If the air circulation of a refrigeration unit’s evaporator fans is to be measured, methods capable of measuring the total delivery volume shall be used.”

Proposal

2. Amend the text to read as follows

“The air circulation of a refrigeration unit’s evaporator fans shall be measured. Methods capable of measuring the total delivery volume shall be used.”

Impact

3. There is no financial impact to industry; the airflow result is already required in the test report.
