Technical Specification and PADI

Procedures for Assembly, Disassembly and Inspection

Presented by the pedestrian safety experts of the International Automobile Manufacturers’ Organization (OICA)
Technical Specification and PADI

Procedures for Assembly, Disassembly and Inspection

Terms of Reference of the Informal Group GTR9 Phase 2 (GTR9-C07r1, see Annex 1, i.e. activity list)
d) Technical specifications (drawings) and PADI (user manual)

Remarks and Questions from Industry
Remarks:

Providing technical specifications and PADI would offer
- additional transparency of the FlexPLI design to the public
- the access of other interested test tool manufacturers

Other test tool manufacturers will have a positive effect on
- minimizing possible supply gaps in future
  (related to the test tool itself and the spare parts)
- optimizing handling and maintenance issues

Similar approaches are observed in the Geneva activities of GTR7
- “Dummy Tool Box” activities
- see GRSP-50-26 and GRSP-50-27
Questions:

When will the FlexPLI information (specification and PADI) be available to the public?

Are there restrictions for other tool manufacturers
- like patents to be considered?
- generally to be considered?

Is the information of the technical specification and PADI limited to
- complete test tool?
- components of the test tool (spare parts)?
Thanks
