Proposal for an amendment to Regulation No. 89 (Speed limitation devices)

Submitted by the experts from the International Organization of Motor Vehicle Manufacturers *

The text reproduced below was prepared by the experts from the International Organization of Motor Vehicle Manufacturers (OICA) to extend the possibility of actuating the service braking system to vehicles of categories M₁ and N₂ below 5t. The modifications to the existing text of the Regulation are marked in bold for new or strikethrough for deleted characters.

* In accordance with the programme of work of the Inland Transport Committee for 2014–2018 (ECE/TRANS/240, para. 105 and ECE/TRANS/2014/26, programme activity 02.4), the World Forum will develop, harmonize and update Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.
I. Proposal

Paragraph 5.1.3., amend to read:

"5.1.3. The speed limitation function shall not actuate the vehicle’s service braking system except for vehicles of categories N_2 below 5t and M_2 where the vehicle’s service braking system may be actuated. A permanent endurance brake (e.g. retarder if fitted) may be incorporated only if it operates after the speed limitation function has restricted the fuel feed to the minimum fuel position. The vehicle’s service braking system may be actuated only after the endurance brake (if fitted) has been activated and additional retarding force is required to maintain the set speed."

Paragraph 5.2.5.1., amend to read:

"5.2.5.1. The ASLF shall not actuate the vehicle’s service braking system except for vehicles of categories M_1, M_1, M_2 and N_1, and vehicles of category N_2 below 5t where the vehicle’s service braking system may be actuated."

Paragraph 13.1.6., amend to read:

"13.1.6. The speed limitation function shall not actuate the vehicle’s service braking system except for vehicles of categories N_2 below 5t and M_2 where the vehicle’s service braking system may be actuated. An endurance brake (e.g. retarder if fitted) may be incorporated only if it operates after the speed limitation function has restricted the fuel feed to the minimum fuel position. The vehicle’s service braking system may be actuated only after the endurance brake (if fitted) has been activated and additional retarding force is required to maintain the set speed."

Paragraph 13.2.1., amend to read:

"13.2.1. The vehicle on which the approved ASLD has been installed shall meet all requirements of paragraphs 5.2.2., 5.2.4., 5.2.5.1., 5.2.5.4., 5.2.6. and 5.2.7."

Paragraph 21.1.3., amend to read:

"21.1.3. The SLD shall not actuate the vehicle’s service braking system except for SLDs which are intended to be fitted to vehicles of categories M_1, M_2 and N_1, and vehicles of category N_2 below 5t where the vehicle’s service braking system may be actuated. An endurance brake (e.g. retarder if fitted) may be incorporated only if it operates after the speed limitation function has restricted the fuel feed to the minimum fuel position. The vehicle’s service braking system may be actuated only after the endurance brake (if fitted) has been incorporated and additional retarding force is required to maintain the set speed."

Paragraph 21.2.5.1., amend to read:

"21.2.5.1. The adjustable speed limitation device shall not actuate the vehicle’s braking system except for vehicles of categories M_1 and N_2, M_2 and N_1, and vehicles of category N_2 below 5t, where the vehicle’s service braking system may be actuated."
II. **Justification**

1. Some vehicles of category M₂ (> 9 occupants) are derived from vehicles of category M₁ by an extension of the rear of their body. The vehicles of category N₂ which are derived from those M₂ vehicles are hence mostly limited to 5 tons (weight limit for M₂).

2. In consequence, speed limiters and adjustable speed limiters on all these categories face very similar weight and driving conditions: low weight and low retarding forces.

3. The current text of the regulation on ASLD (Adjustable Speed Limit Device) permits the actuation of the vehicle’s service braking system when the speed voluntarily set by the driver is exceeded, but this is currently limited to vehicles of categories M₁ and N₁.

4. The proposal extends this possibility:
   (a) to ASLDs of vehicles of categories M₂ and N₂<5t, and
   (b) to SLDs (Speed Limiter Devices) of vehicles of categories M₂ and N₂<5t.

5. The proposal in addition ensures a positive management of the retardation sources: fuel feed, endurance brake, service braking system.
