AGREEMENT

CONCERNING THE ADOPTION OF UNIFORM TECHNICAL PRESCRIPTIONS FOR WHEELED VEHICLES, EQUIPMENT AND PARTS WHICH CAN BE FITTED AND/OR BE USED ON WHEELED VEHICLES AND THE CONDITIONS FOR RECIPROCAL RECOGNITION OF APPROVALS GRANTED ON THE BASIS OF THESE PRESCRIPTIONS *

(Revision 2, including the amendments which entered into force on 16 October 1995)

Addendum xxx: Regulation No. xxx

Date of entry into force:

UNIFORM TECHNICAL PRESCRIPTIONS CONCERNING THE APPROVAL OF IMMOBILIZERS AND APPROVAL OF A VEHICLE WITH REGARD TO ITS IMMOBILIZER

UNITED NATIONS

* Former title of the Agreement:
Regulation No. xxx

UNIFORM TECHNICAL PRESCRIPTIONS CONCERNING APPROVAL OF
IMMOBILIZERS AND APPROVAL OF A VEHICLE WITH REGARD TO ITS
IMMOBILIZER

CONTENTS

REGULATION

ANNEXES

Annex 1 - Information document: in accordance with paragraph 5. of this Regulation relating to ECE component type approval of an immobilizer system

Annex 2 - Communication concerning approval granted, extended, refused, withdrawn, production definitively discontinued: of a component type as an immobilizer pursuant to this Regulation

Annex 3 - Arrangements of approval marks

Annex 4 - Model of certificate of conformity

Annex 5 - Model of installation certificate

Annex 6 - Specifications for mechanical key switches
1. SCOPE

This Regulation applies to:

1.1. Approval of

(i) Immobilizers primarily dedicated to vehicles of category M1 and vehicles of category N1 with a maximum mass of not more than 2 tonnes, and

(ii) vehicles of category M1 and vehicles of category N1 with a maximum mass of not more than 2 tonnes with regard to immobilizers 2/1/.

1.2. At the request of the manufacturer, Contracting Parties may grant approvals to vehicles of other categories and to immobilizers for fitment to such vehicles.

2. DEFINITIONS

2.1. "Component" means a device subject to the requirements of this regulation and intended to be part of a vehicle, which may be type-approved independently of a vehicle where this regulation makes express provisions for so doing;

2.2. "Separate technical unit" means a device subject to the requirements of this regulation and intended to be part of a vehicle, which may be type-approved separately, but only in relation to one or more specified types of vehicle where this regulation makes express provisions for so doing;

2.3. "Manufacturer" means the person or body who is responsible to the approval authority for all aspects of the type approval process and for ensuring conformity of production. It is not essential that the person or body is directly involved in all stage of the construction of the vehicle, system, component or separate technical unit which is the subject of the approval process.

2.4. "Immobilizer" means a device which is intended to prevent normal driving away of a vehicle under its own power (prevention of unauthorized use).

2.5. "Control equipment" means equipment necessary for the setting and/or unsetting of an immobilizer.

2.6. "Status display" means any device intended to indicate the status of the immobilizer (set/unset, change of set to unset and vice versa).

2.7. "Set state" means the state in which the vehicle cannot be driven normally under its own power.

2.8. "Unset state" means the state in which the vehicle can be driven normally.
2.9. "Key" means any device designed and constructed to provide a method of operating a locking system, which is designed and constructed to be operated only by that device.

2.10. "Override" means a design feature which locks the immobilizer in the unset condition.

2.11. "Rolling code" means an electronic code consisting of several elements the combination of which changes at random after each operation of the transmitting unit.

2.12. "Type of immobilizer" means systems which do not differ significantly in such essential aspects as:

(a) the manufacturer's trade name or mark,
(b) the kind of control equipment,
(c) the design of their operation on the relevant vehicle system(s) (as referred to in paragraph 5.2.1. below).

2.13. "Vehicle type with regard to its immobilizer" means vehicles which do not differ significantly in such essential aspects as:

(a) the manufacturer's trade name or mark,
(b) vehicle features which significantly influence the performances of the immobilizer,
(c) the type and design of the immobilizer.

3. APPLICATION FOR APPROVAL

3.1. The application for approval of a vehicle or component type with regard to this Regulation shall be submitted by the manufacturer.

3.2. It shall be accompanied by an information document in accordance with the model shown in Annex 1, and giving a description of the technical characteristics of the immobilizer and the method(s) of installation for each make and type of vehicle on which the immobilizer is intended to be installed.

3.3. Vehicle(s) / component(s) representative of the type(s) to be approved shall be submitted to the technical service responsible for conducting the approval tests.

4. APPROVAL

4.1. If the type submitted for approval to this Regulation meets the requirements of this Regulation, approval of that type shall be granted.
4.2. An approval number shall be assigned to each type approved. Its first two digits (at present 00, corresponding to the Regulation in its original form) shall indicate the series of amendments incorporating the most recent [major] technical amendment made to the Regulation at the time of issue of the approval. The same Contracting Party shall not assign the same number to another type of vehicle or component as defined in this Regulation.

4.3. Notice of approval or of extension of approval of a type pursuant to this Regulation shall be communicated to the Contracting Parties to the Agreement applying this Regulation by means of a form conforming to the model in Annex 2 to this Regulation.

4.4. There shall be affixed, conspicuously and in a readily accessible place specified on the approval form, to every vehicle or component conforming to a type approved under this Regulation, an international approval mark consisting of:

4.4.1. a circle surrounding the letter "E" followed by the distinguishing number of the country which has granted approval 41/ and

4.4.2. the number of this Regulation, followed by the letter "R", a dash and the approval number, to the right of the circle prescribed in paragraph 4.4.1.

4.5. If a type conforms to a type approved, under one or more other Regulations annexed to the Agreement, in the country which has granted approval under this Regulation, the symbol prescribed in paragraph 4.4.1. need not be repeated; in

4/  1 for Germany, 2 for France, 3 for Italy, 4 for the Netherlands, 5 for Sweden, 6 for Belgium, 7 for Hungary, 8 for the Czech Republic, 9 for Spain, 10 for Serbia and Montenegro, 11 for the United Kingdom, 12 for Austria, 13 for Luxembourg, 14 for Switzerland, 15 (vacant), 16 for Norway, 17 for Finland, 18 for Denmark, 19 for Romania, 20 for Poland, 21 for Portugal, 22 for the Russian Federation, 23 for Greece, 24 for Ireland, 25 for Croatia, 26 for Slovenia, 27 for Slovakia, 28 for Belarus, 29 for Estonia, 30 (vacant), 31 for Bosnia and Herzegovina, 32 for Latvia, 33 (vacant), 34 for Bulgaria, 35 (vacant), 36 for Lithuania, 37 for Turkey, 38 (vacant), 39 for Azerbaijan, 40 for The former Yugoslav Republic of Macedonia, 41 (vacant), 42 for the European Community (Approvals are granted by its Member States using their respective ECE symbol), 43 for Japan, 44 (vacant), 45 for Australia, 46 for Ukraine, 47 for South Africa, 48 for New Zealand, 49 for Cyprus, 50 for Malta and 51 for the Republic of Korea. Subsequent numbers shall be assigned to other countries in the chronological order in which they ratify or accede to the Agreement Concerning the Adoption of Uniform Technical Prescriptions for Wheeled Vehicles, Equipment and Parts which can be Fitted and/or be Used on Wheeled Vehicles and the Conditions for Reciprocal Recognition of Approvals Granted on the Basis of these Prescriptions, and the numbers thus assigned shall be communicated by the Secretary-General of the United Nations to the Contracting Parties to the Agreement.
such a case, the Regulation under which approval has been granted in the country which has granted approval under this Regulation shall be placed in vertical columns to the right of the symbol prescribed in paragraph 4.4.1.

4.6. The approval mark shall be clearly legible and be indelible.

4.7. In the case of a vehicle, the approval mark shall be placed close to or on the vehicle data plate affixed by the manufacturer.

4.8. In the case of a component approved separately as an immobilizer, the approval mark shall be affixed by the manufacturer to the major element(s) of the device. In the case of a component approved as an immobilizer under this regulation and an alarm system under UN Regulation No. XXX both approval marks shall be affixed by the manufacturer to the major element(s) of the device.

4.9. Annex 3 to this Regulation gives examples of arrangements of approval marks.

4.10. As an alternative to the approval mark described in paragraph 4.4. above, a certificate of conformity shall be issued for every immobilizer offered for sale.

Where an immobilizer manufacturer supplies an unmarked immobilizer approved to this Regulation to a vehicle manufacturer, for fitment by that manufacturer as original equipment for a vehicle model or range of vehicle models, the immobilizer manufacturer shall supply a number of copies of the certificate of conformity to the vehicle manufacturer, sufficient for that manufacturer to obtain the vehicle approval of this Regulation.

If the immobilizer is made up of separate components, its main component(s) shall bear a reference mark and the certificate of conformity shall provide a list of such reference marks.

A model of the certificate of conformity is given in Annex 6 to this Regulation.

5. SPECIFICATIONS

5.1. GENERAL SPECIFICATIONS

5.1.1. It must be possible to set and unset the immobilizer in accordance with these requirements.

5.1.2. If the immobilizer includes the possibility of a radio transmission, e.g. for setting or unsetting, it shall comply with the relevant ETSI Standards (see
footnote 2), e.g. EN 300 220-1 V1.3.1. (2000-09), EN 300 220-2 V1.3.1. (2000-09), EN 300 220-3 V1.1.1. (2000-09) and EN 301 489-3 V1.2.1. (2000-08) (including any advisory requirements). The frequency and maximum radiated power of radio transmissions for the setting and unsetting of the immobilizer must comply with the CEPT/ERC (see footnote 3) Recommendation 70-03 (17 February 2000) relating to the use of short range devices (see footnote 4).

5.1.3. An immobilizer and its installation shall be so designed that any equipped vehicle continues to meet the technical requirements.

5.1.4. It shall not be possible for an immobilizer to enter the set state when the ignition key is in the engine running mode:

(a) The vehicle is equipped or intended to be equipped for ambulance, fire brigade or police purposes; or

(b) the engine is required to:

(i) drive machinery forming part of, or mounted on, the vehicle for purposes other than driving the vehicle; or

(ii) maintain the electrical power of the batteries of the vehicle at a level required for driving that machinery or apparatus;

and the vehicle is stationary with the parking brake applied. When this exception is used, this fact shall be stated under item 2 of the addendum to the communication document (Annex 2 to this Regulation).

5.1.5. It shall not be possible to permanently override an immobilizer.

5.1.6. The immobilizer shall be designed and built such that when installed it shall not adversely affect the designed function and the safe operation of the vehicle, even in the case of malfunction.

5.1.7. An immobilizer shall be designed and built such that, when installed on a vehicle, according to the manufacturer's instructions, it cannot rapidly and without attracting attention be rendered ineffective or destroyed by, e.g. the use of low cost easily concealed tools, equipment or fabrications readily available to

2 ETSI: European Telecommunications Standards Institute. If these Standards are not available when this Regulation comes into force, then the relevant domestic requirements shall apply.
3 CEPT: Conference of European Posts and Telegraphs
4 Contracting Parties may prohibit the frequency and/or the power and may permit the use of other frequency and/or power.
the public at large. It shall be difficult and time consuming to replace a major component or assembly in order to bypass the immobilizer.

5.1.8. An immobilizer shall be so designed and built such that when installed as specified by the manufacturer it is able to withstand the environment within the vehicle for a reasonable lifetime (for testing see paragraph 5.3.). More particularly the electrical properties of the on-board circuitry shall not be adversely affected by the addition of the immobilizer (lead cross-sections, contact safety, etc.)

5.1.9. An immobilizer may be combined with other vehicle systems or may be integrated into them (e.g. engine management, alarm systems).

5.1.10. It shall not be possible for an immobilizer to prevent the release of the brakes of the vehicle, except in the case of an immobilizer which prevents the release of pneumatically released spring brakes 9/ and functions in such a way that in normal operation, or in failure conditions, the technical requirements of Regulation No. 13 in force at the time of application for type approval under this Regulation are satisfied.

Compliance with this paragraph does not exempt an immobilizer which prevents the release of pneumatically released spring brakes from the technical requirements set out in this Regulation.

5.1.11. It shall not be possible for an immobilizer to operate in such a manner as to apply the brakes of the vehicle.

5.2. PARTICULAR SPECIFICATIONS

5.2.1. Extent of disablement

5.2.1.1. An immobilizer shall be designed so as to prevent the operation of the vehicle under its own power by at least one of the following means:

5.2.1.1.1. disable, in the case of after-market fitting, or vehicle equipped with diesel engine, at least two separate vehicle circuits that are needed for vehicle operation under its own power (e.g. starter motor, ignition, fuel supply, pneumatically released spring brakes, etc.);

5.2.1.1.2. interference by code of at least one control unit required for the operation of the vehicle.

9/ As defined in Annex 8 of ECE Regulation No. 13, as amended.
5.2.1.2. An immobilizer for fitment to a vehicle equipped with a catalytic converter shall not cause unburnt fuel to enter the exhaust.

5.2.2. Operating reliability

Operating reliability shall be achieved by suitable design of the immobilizer, account being taken of specific environmental conditions in the vehicle (see paragraphs 5.1.8. and 5.3.).

5.2.3. Operating safety

It shall be ensured that the immobilizer does not change its state (set/unset) as a result of any of the tests in paragraph 5.3.

5.2.4. Setting of the immobilizer

5.2.4.1. The immobilizer must be set without supplementary action from the driver by at least one of the following means:

(a) at rotation of the ignition key into the "0" position in the ignition lock and activation of a door; in addition, immobilizers which unset immediately before or during the normal starting procedure of the vehicle are permitted to set on turning the ignition off,

(b) a maximum of 1 minute after removing the key of the ignition lock.

5.2.4.2. If the immobilizer can enter the set state when the ignition key is in the engine running mode as provided for in paragraph 5.1.4., the immobilizer may also be set by the opening of the driver's door and/or the authorised user carrying out a deliberate action.

5.2.5. Unsetting

5.2.5.1. Unsetting shall be achieved by using one or a combination of the following devices. Other devices with an equivalent level of security giving equivalent performance are permitted.

5.2.5.1.1. A key pad for inputting an individually selectable code having at least 10,000 variants.

5.2.5.1.2. Electrical/electronic device, e.g. remote control, with at least 50,000 variants and shall incorporate rolling codes and/or have a minimum scan time of ten days, e.g. a maximum of 5,000 variants per 24 hours for 50,000 variants minimum.
5.2.5.1.3. If unsetting can be achieved via a remote control, the immobilizer must return to the set condition within 5 minutes after unsetting if no supplementary action on the starter circuit has been undertaken.

5.2.6. Status display

5.2.6.1. To provide information on the status of the immobilizer (set/unset, change of set to unset and vice versa), optical displays inside and outside the passenger compartment are allowed. Any optical signal or any use of lighting and light-signalling devices outside the passenger compartment shall fulfil the requirements of Regulation No. 48.

5.2.6.2. If an indication of short-term "dynamic" processes such as changes from "set" to "unset" and vice versa is provided, it shall be optical, according to paragraph 5.2.6.1. Such optical indication may also be produced by the simultaneous operation of the direction indicators and/or passenger compartment lamp(s), provided that the duration of the optical indication by the direction indicators does not exceed 3 seconds.

5.3. OPERATION PARAMETERS AND TEST CONDITIONS 85/

5.3.1. Operation parameters

The requirements below does not apply to:
(i) those components that are fitted and tested as part of the vehicle, whether or not an immobilizer is fitted (e.g. lamps, alarm system, device to prevent unauthorized use), or
(ii) those components that have previously been tested as part of the vehicle and documentary evidence has been provided.

5.3.1.1 All components of the immobilizer shall operate without any failure under the following conditions.

5.3.1.1.1. Climatic conditions

Two classes of environmental temperature are defined as follows:

(a)-40°C to +85°C for parts to be fitted in the passenger or luggage compartment,

8/ Lamps which are used as part of the optical warning devices and which are included in the standard car lighting system need not comply with the operation parameters in paragraph 5.3.1. and shall not be submitted to tests listed under paragraph 5.3.3.
(b) -40°C to +125°C for parts to be fitted in the engine compartment unless otherwise specified.

5.3.1.1.2. Degree of protection for installation

The following degrees of protection in accordance with IEC Publication 529 1989 shall be provided:

(i) IP 40 for parts to be fitted in the passenger compartment,

(ii) IP 42 for parts to be fitted in the passenger compartment of roadsters/convertibles and cars with moveable roof-panels if the installation location requires a higher degree of protection than IP 40,

(iii) IP 54 for all other parts.

The immobilizer manufacturer shall specify in the installation instructions any restrictions on the positioning of any part of the installation with respect to dust, water and temperature.

5.3.1.1.3. Weatherability

7 days according to IEC 68-2-30-1980.

5.3.1.1.4. Electrical conditions

Rated supply voltage: 12 V

**Operation supply voltage range: from 9 V to 15 V in the temperature range according to paragraph 5.3.1.1**

Time allowance for excess voltages at 23°C:
U = 18 V, max. 1 h
U = 24 V, max. 1 min.

5.3.2. Test conditions

All the tests shall be carried out in sequence on a single immobilizer. However, at the discretion of the test authority, other samples may be used if this is not considered to affect the results of the other tests.

5.3.2.1. Normal test conditions

Voltage U = (12 ± 0.2) V
Temperature T = (23 ± 5)°C
5.3.3. **Operation test**

All components of the immobilizer shall comply with prescriptions given in paragraphs 5.3.3.2. to 5.3.3.9. of this Regulation.

5.3.3.1 Upon completion of all the tests specified below, the immobilizer shall be tested under the normal test conditions specified in paragraph 5.3.2.1 of this Regulation to check that it continues to function normally. Where necessary, fuses may be replaced prior to the test.

5.3.3.2. Resistance to temperature and voltage changes

Compliance with the specifications defined under paragraph 5.3.3.1 shall also be checked under the following conditions:

5.3.3.2.1. Test temperature................................................................... $T (-40 \pm 2)^{\circ}C$
Test voltage $U = (9 \pm 0.2) \, V$
Storage duration 4 hours

5.3.3.2.2. For parts to be fitted in the passenger or luggage compartment:
Test temperature $T = (+85 \pm 2)^{\circ}C$
Test voltage $U = (15 \pm 0.2) \, V$
Storage duration 4 hours

5.3.3.2.3. For parts to be fitted in the engine compartment unless otherwise specified:
Test temperature $T = (+125 \pm 2)^{\circ}C$
Test voltage $U = (15 \pm 0.2) \, V$
Storage duration 4 hours

5.3.3.2.4. The immobilizer, in both set and unset state, shall be submitted to an excess voltage equal to $(18 \pm 0.2) \, V$ for 1 hour.

5.3.3.2.5. The immobilizer, in both set and unset state, shall be submitted to an excess voltage equal to $(24 \pm 0.2) \, V$ for 1 min.

5.3.3.3. Safe operation after foreign body and water-tightness testing

After the test for tightness to foreign body and water according to IEC 529-1989, for degrees of protection as in paragraph 5.3.1.1.2, the operation tests according to paragraph 5.3.3.1. shall be repeated.

5.3.3.4. Safe operation after condensed water test
After a resistance-to-humidity test to be carried out according to IEC 68-2-30 (1980) the operation tests according to paragraph 5.3.3.1. shall be repeated.

5.3.3.5. Test for safety against reversed polarity

The immobilizer and components thereof shall not be destroyed by reversed polarity up to 13 V during 2 min. After this test the operation tests according to paragraph 5.3.3.1. shall be repeated with fuses changed, if necessary.

5.3.3.6. Test for safety against short-circuits

All electrical connections of the immobilizer must be short-circuit proof against earth, max. 13 V and/or fused. After this test the operation tests according to paragraph 5.3.3.1. shall be repeated, with fuses changed if necessary.

5.3.3.7. Energy consumption in the set condition

The energy consumption in set condition under the conditions given in paragraph 5.3.2.1. shall not exceed 20 mA on average for the complete immobilizer including status display.

5.3.3.8. Safe operation after vibration test

5.3.3.8.1. For this test, the components are subdivided into two types:

Type 1: components normally mounted on the vehicle,
Type 2: components intended for attachment to the engine.

5.3.3.8.2. The components/immobilizer shall be submitted to a sinusoidal vibration mode whose characteristics are as follows:

5.3.3.8.2.1. For type 1

The frequency shall be variable from 10 Hz to 500 Hz with a maximum amplitude of ± 5 mm and maximum acceleration of 3 g (0-peak).

5.3.3.8.2.2. For type 2

The frequency shall be variable from 20 Hz to 300 Hz with a maximum amplitude of ± 2 mm and maximum acceleration of 15 g (0-peak).

5.3.3.8.2.3. For both type 1 and type 2

The frequency variation is 1 octave/min.

The number of cycle is 10, the test shall be performed along each of the 3 axes.
The vibrations are applied at low frequencies at a maximum constant amplitude and at a maximum constant acceleration at high frequencies.

5.3.3.8.3. During the test the immobilizer shall be electrically connected and the cable shall be supported after 200 mm.

5.3.3.8.4. After the vibration test the operation tests according to paragraph 5.3.3.1. shall be repeated.

5.3.3.9. Electromagnetic compatibility

The immobilizer shall be submitted to the tests described in Annex 7.

5.4. INSTRUCTIONS

(Paragraphs 5.4.1. to 5.4.3. for the purposes of aftermarket installation only).

Each immobilizer shall be accompanied by:

5.4.1. Instructions for installation.

5.4.1.1. The list of vehicles and vehicle models for which the device is intended. This list may be specific or generic, e.g. "all cars with petrol engines and 12 V negative earth batteries".

5.4.1.2. The method of installation illustrated by photographs and/or very clear drawings.

5.4.1.3. Detailed installation instructions provided by the supplier shall be such that when correctly followed by a competent installer, the safety and reliability of the vehicle is not affected.

5.4.1.4. The supplied installation instructions shall identify the electrical power requirements of the immobilizer and, where relevant, shall advise an increasing of battery size.

5.4.1.5. The supplier shall provide post installation procedures for checking the vehicle. Particular attention shall be drawn to safety related features.

5.4.2. A blank installation certificate, an example of which is given in Annex 5.
5.4.3. A general statement to the immobilizer purchaser calling his attention to the following points:

5.4.3.1. the immobilizer should be installed in accordance with the manufacturer's instructions;

5.4.3.2. the selection of a good installer is recommended (the immobilizer manufacturer may be contacted to indicate appropriate installers);

5.4.3.3. the installation certificate supplied with the immobilizer should be completed by the installer.

5.4.4. Instructions for use.

5.4.5. Instructions for maintenance.

5.4.6. A general warning regarding the dangers of making any alterations or additions to the immobilizer; such alterations and additions would automatically invalidate the certificate of installation referred to in paragraph 8.5.2. above.

6. MODIFICATION OF THE TYPE AND EXTENSION OF APPROVAL

6.1. Every modification of a vehicle or component type with regard to this Regulation shall be notified to the administrative department which approved the vehicle or component type. The department may then either:

6.1.1. consider that the modifications made are unlikely to have an appreciable adverse effect and that in any case the component or the vehicle still complies with the requirements, or

6.1.2. require a further report from the technical service responsible for conducting the tests.

6.2. Confirmation or refusal of approval, specifying the alteration, shall be communicated by the procedure specified in paragraph 4.3. above to the Contracting Parties to the Agreement applying this Regulation.

6.3. The competent authority issuing the extension of approval shall assign a serial number to each communication form drawn up for such an extension.
7. CONFORMITY OF PRODUCTION PROCEDURES

The conformity of production procedures shall comply with those set out in the Agreement, Appendix 2 (E/ECE/324-E/ECE/TRANS/505/Rev.2), with the following requirements:

7.1. Vehicles/components under this Regulation shall be so manufactured as to conform to the type approved by meeting the requirements of the relevant part(s) of this Regulation.

7.2. For each type of vehicle or component the tests prescribed in the relevant part(s) of this Regulation shall be carried out on a statistically controlled and random basis, in accordance with one of the regular quality assurance procedures.

7.3. The authority which has granted approval may at any time verify the conformity control methods applied in each production facility. The normal frequency of these verifications shall be one every two years.

8. PENALTIES FOR NON-CONFORMITY OF PRODUCTION

8.1. The approval granted in respect of a vehicle/component type pursuant to this Regulation may be withdrawn if the requirements laid down in paragraph 10. above are not complied with.

8.2. If a Contracting Party to the Agreement applying this Regulation withdraws an approval it has previously granted, it shall forthwith so notify the other Contracting Parties applying this Regulation, by means of a form conforming to the model in Annex 2.

9. PRODUCTION DEFINITELY DISCONTINUED

If the holder of the approval completely ceases to manufacture a vehicle/component type approved in accordance with this Regulation, he shall so inform the authority which granted the approval. Upon receiving the relevant communication, that authority shall inform thereof the other Contracting Parties to the Agreement applying this Regulation by means of a form conforming to the model in Annex 2.
10. NAMES AND ADDRESSES OF TECHNICAL SERVICES RESPONSIBLE FOR CONDUCTING APPROVAL TESTS, AND OF ADMINISTRATIVE DEPARTMENTS

The Contracting Parties to the Agreement applying this Regulation shall communicate to the United Nations secretariat the names and addresses of the technical services responsible for conducting approval tests and of the administrative departments which grant approval and to which forms certifying approval or extension or refusal or withdrawal of approval, issued in other countries are to be sent.
Annex 1

(Maximum format: A4 (210 mm x 297 mm))

INFORMATION DOCUMENT

in accordance with paragraph 8. of Regulation No. 116 relating to ECE component or separate technical unit type approval of an immobilizer system

1. GENERAL

1.1. Make (trade name of manufacturer):

1.2. Type:

1.3. Means of identification of type, if marked on the device (b):

1.3.1. Location of that marking:

1.4. Name and address of manufacturer:

1.5. Location of the ECE approval mark:

1.6. Address(es) of assembly plant(s):

2. DESCRIPTION OF THE DEVICE

2.1. A detailed technical description of the vehicle immobilizer and of the measures taken against inadvertent activation:

2.2. The vehicle system(s) on which the vehicle immobilizer acts:

2.3. Method of setting/unsetting the device:

2.4. Number of effective interchangeable codes, if applicable:

2.5. List of main components comprising the device and, if applicable, their reference marks:
3. DRAWINGS

3.1. Drawings of the main components of the device (the drawings must show the intended space for ECE type approval mark):

4. INSTRUCTIONS

4.1. List of vehicles to which the device is intended to be fitted:

4.2. Description of the method of installation illustrated by photographs and/or drawings:

4.3. Instructions for use:

4.4. Instructions for maintenance, if any:

(b) If the means of identification of type contains characters not relevant to describe the component or separate technical unit types covered in this information document, such characters shall be represented in the documentation by the symbol "?" (e.g. ABC??123??).
Annex 2

COMMUNICATION

Addendum
to ECE type approval certificate No. …

concerning the type approval of an immobilizer with regard to Regulation No. -xxx

1. Additional information:

1.1. Brief description of the immobilizer:

1.2. List of vehicles to which the immobilizer is intended to be fitted:

1.3. Types of vehicles on which the immobilizer has been tested:

1.4. List of main components, duly identified, comprising the immobilizer:
2. Remarks:

1/ Distinguishing number of the country which has granted/extended/refused/ withdrawn approval (see approval provisions in the Regulation).

2/ Strike out what does not apply (there are cases where nothing needs to be deleted, when more than one entry is applicable).

(b) If the means of identification of type contains characters not relevant to describe the component or separate technical unit types covered in this information document, such characters shall be represented in the documentation by the symbol "?" (e.g. ABC??123??).
Annex 3

ARRANGEMENTS OF APPROVAL MARKS

Figure 1
(see paragraph 4.2. of this Regulation)

The above approval mark figure 1 affixed to a vehicle shows that the type concerned was approved in the Netherlands (E4) pursuant to Regulation No. xxx under approval No. 001234. The first two digits (00) of the approval number indicate that the approval was granted in accordance with the requirements of Regulation No. xxx in its original form.
Annex 4

MODEL OF CERTIFICATE OF CONFORMITY

I the undersigned .................................................................

(surname and name)

Testify that the immobilizer 1/ described below:

Make: .................................................................

Type: .................................................................

is in total conformity with the type approved

at ................................................................. on .................................................................

(place of approval) (date)

as described in the communication form bearing approval No. ........................................................

Identification of the main component(s):

Component: ................................................................. Marking: .................................................................

Done at: ................................................................. on: .................................................................

Manufacturer's full address and stamp: .................................................................

Signature : ................................................................. (please specify position)

1/ Strike out what does not apply.
MODEL OF INSTALLATION CERTIFICATE

I, the undersigned ......................................................................................................................................................... professional installer, certify that the installation of the immobilizer 1/ described below has been carried out by myself pursuant to the mounting instructions supplied by the manufacturer of the system.

Description of the vehicle

Make: ..............................................................................................................................................................................

Type: ..............................................................................................................................................................................

Serial number: ..........................................................................................................................................................

Registration number: ..................................................................................................................................................

Description of the immobilizer 1/

Make: ..............................................................................................................................................................................

Type: ..............................................................................................................................................................................

Approval number: ........................................................................................................................................................

Done at: ..............................................  on: ..................................................................................

Installer's full address and stamp: ...........................................................................................................................................

Signature: ........................................................................................................................................................................

(please specify position)

1/ Strike out what does not apply.
Annex 6

SPECIFICATIONS FOR MECHANICAL KEY SWITCHES

1. The cylinder of the key switch shall not protrude by more than 1 mm from the cowling, and the protruding part shall be conical.

2. The joint between the cylinder core and the cylinder casing shall be capable of withstanding a tensile force of 600 N and a torque of 25 Nm.

3. The key switch shall be provided with a cylinder drill obstruction.

4. The key profile shall have at least 1,000 effective permutations.

5. The key switch shall not be operable by a key which differs by only one permutation from the key matching the key switch.

6. The key aperture to an external key switch shall be shuttered or otherwise protected against the penetration of dirt and/or water.
Annex 7

ELECTROMAGNETIC COMPATIBILITY

Note: To test the electromagnetic compatibility, either paragraph 1. or paragraph 2. shall be used, depending on the test facilities.

1. METHOD ISO

   Immunity against disturbances conducted along supply lines

   Apply the test pulses 1, 2a/2b, 3a, 3b, 4 and 5a/5b according to the International Standard ISO 7637-2:2004 to the supply lines as well as to other connections of immobilizer which may be operationally connected to supply lines.

   Concerning pulse 5, pulse 5b shall be applied on vehicles which include an alternator with internal limitation diode and pulse 5a shall be applied for others cases.

   Concerning the pulse 2, pulse 2a shall always be applied and pulse 2b could be performed with the agreement between the vehicle manufacturer and the technical approval services.

   With the agreement of the Technical Service, Test pulse 5a/5b need not be applied in the following circumstances:
   (a) Type Approval of an immobilizer which is to be type approved as a separate technical unit and intended for the fitment to vehicles without any alternators

   In this case, the manufacturer of the immobilizer shall:

   (i) Specify in item 4.5. of the information document (Annex 1, Part 2), that the requirement of this paragraph was not applied to the immobilizer (in accordance with paragraph 5. of this Regulation); and
   (ii) Specify in item 4.1. of the information document, the list of vehicles to which the immobilizer is intended to be fitted and the relevant installation conditions in item 4.2.

   (b) Type approval of a vehicle in respect of an immobilizer intended for fitment to vehicles without alternators

   In this case, the manufacturer shall specify in item 3.1.3.1.1. of the information document (Annex 1, Part 1), that the requirement of this paragraph does not apply to the immobilizer due to the nature of installation conditions.

   (c) Type approval of a vehicle in respect of the installation of a immobilizer which is type approved as a separate technical unit and intended for the fitment to vehicles without any alternators
In this case, the vehicle manufacturer shall specify in item 3.1.3.1.1. of the information document (Annex 1, Part 1), that the requirement of this paragraph does not apply to the installation of the immobilizer where the relevant installation conditions are met.

This requirement does not apply in cases where the information required in item 3.1.3.1.1. of Annex 1 has already been submitted for the approval of the separate technical unit.

Immobilizer in unset state and set state

The test pulses 1 through 5, shall be applied with a degree of severity III. The required functional status for all applied test pulses are given in table 1.

Immunity against disturbance coupled on signal lines

Leads which are not connected to supply lines (e.g. special signal lines) shall be tested in accordance with the International Standard ISO7637-3:1995 (and Corr.1). The required functional status for all applied test pulses are given in table 2.

Immunity against radiated high frequency disturbances

Testing of the immunity of a immobilizer in a vehicle may be performed according to the technical prescriptions and transitional provisions of Regulation No. 10, 04 series of amendments and test methods described in Annex 6 for the vehicles and Annex 9 for a separate technical unit.
Electrical disturbance from electrostatic discharges

With the agreement of the Technical Service this requirement need not apply in the following circumstances:

(a) Type Approval of a immobilizer which is to be type approved as a separate technical unit

In this case, the manufacturer of the immobilizer shall:

(i) Specify in item 4.5. of the information document (Annex 1, Part 2), that the requirement of this paragraph was not applied to the immobilizer (in accordance with paragraph 7. of this Regulation); and
(ii) Specify in item 4.1. of the information document, the list of vehicles to which the immobilizer is intended to be fitted and the relevant installation conditions in item 4.2.

(b) Type approval of a vehicle in respect of an immobilizer

In this case, the manufacturer shall specify in paragraph 3.1.3.1.1. of the information document (Annex 1, Part 1), that the requirement of this paragraph does not apply to the immobilizer due to the nature of installation conditions and the vehicle manufacturer shall prove it by submitting related documents.

(c) Type approval of a vehicle in respect of the installation of a immobilizer which is type approved as a separate technical unit

In this case, the vehicle manufacturer shall specify in item 3.1.3.1.1. of the information document (Annex 1, Part 1), that the requirement of this paragraph does not apply to the installation of the immobilizer where the relevant installation conditions are met.

This requirement does not apply in cases where the information required in item 3.1.3.1.1. of Annex 1, Part 1 has already been submitted for the approval of the separate technical unit.

Radiated emissions

Tests shall be performed according to the technical prescriptions and transitional provisions of Regulation No. 10, 04 series of amendments prescriptions and according to the test methods described in Annexes 4 and 5 for vehicles or Annexes 7 and 8, for a separate technical unit.

2. METHOD IEC
Electromagnetic field

The immobilizer shall undergo the basic test. It shall be subjected to the electromagnetic field test described in IEC Publication 839-1-3-1998 test A-13 with a frequency range from 20 to 1000 MHz, and for a field strength level of 30 V/m.

In addition, the immobilizer shall be subjected to the electrical transient conducted and coupled tests described in the International Standard ISO 7637 Parts 1:1990, 2:1990 and 3:1995, as appropriate.

Electrical disturbance from electrostatic discharges

The immobilizer shall undergo the basic test. It shall be subjected to testing for immunity against electrostatic discharge as described in either EN 61000-4-2, or ISO/TR 10605-1993, at the manufacturer's choice.

Radiated emissions

The immobilizer shall be subjected to testing for the suppression of radio frequency interference according to the technical prescriptions and transitional provisions of Regulation No. 10, 04 series of amendments and according to tests method described in Annexes 4 and 5 for vehicles and Annexes 7 and 8 for a separate technical unit.
