Appendix 1C

Submitted by the Government of Estonia

This document contains proposals to amend Annex IC in order to adapt the EU specifications on the smart tachograph to the AETR Agreement. This proposal has already been discussed as Informal document No. 2 (October 2017).
Requirements for construction, testing, installation and inspection of smart tachographs

Article 1
Annex IC to Commission Implementing Regulation (EU) 2016/799 is inserted as Appendix IC to the Annex to the AETR, with the amendments set out in Article 3.

Article 2
Appendix IC may be amended by the procedure specified in Article 22 of the AETR.

Article 3

3.1. Point 4.1 is changed as follows: [card layout]

3.1.1. Requirements (227) to (229) are changed as follows:

'(227) the words ‘Driver card’ or ‘Control card’ or ‘Workshop card’ or ‘Company card’ printed in capital letters in the official language or languages of the Contracting Party issuing the card, according to the type of the card.'

(228) the name of the Contracting Party issuing the card (optional)

(229) the distinguishing sign of the Contracting Party issuing the card. The distinguishing signs of non EU Contracting Parties are those drawn in accordance with the 1968 Vienna Convention on Road Traffic or the 1949 Geneva Convention on Road Traffic.

3.1.2. In requirement (235), the term 'Member State' is replaced by the term 'Contracting Party'. The reference to the EU flag with the letters 'MS' meaning 'Member State' is replaced by the letters 'CP' meaning 'Contracting Party', the flag of the non EU Contracting Party being optional.

3.1.3. Requirement (236) is changed as follows:

'(236) After consulting the UN/ECE secretariat, Contracting Parties may add colours or markings, such as security features, without prejudice to the other provisions of this Appendix.'

3.2. Requirement (241) is changed as follows: [testing temperatures]

'(241) Tachograph cards shall be capable of operating correctly in all the climatic conditions normally encountered in the territory of the Contracting Parties and at least in the temperature range – 25 °C to + 70 °C with occasional peaks of up to + 85 °C, ‘occasional’ meaning not more than 4 hours each time and not over 100 times during the life time of the card.'

3.3. Requirements (440a) and (440b) are inserted:

'(440a) Laboratories other than the one referred to in paragraph (440) may be allowed to carry out interoperability tests, provided that there is an agreement among AETR Contracting Parties on the following aspects:

The way in which the full equivalence between laboratories is guaranteed, including the creation of new and complete reference sets.

The performance of regular cross validations to ensure certification equivalence, conflict resolution mechanisms.

The centralization of the information and certificates in a centralized repository (secured database & website).
Laboratories allowed to carry out interoperability tests shall be accredited by the laboratory referred to in paragraph (440), in accordance with a specific set of criteria addressing the aspects listed in paragraph (440a). The set of criteria shall be annexed to the AETR.

### 3.4. Test number 4.1 for the tachograph cards referred to in Appendix 9 is changed as follows:

<table>
<thead>
<tr>
<th>4.1 Chip</th>
<th>[Operating temperature]</th>
<th>241 to 244</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The Tachograph card chip shall operate in an ambient temperature range between -25 °C and +85 °C.</td>
<td>ECE R10 ISO/IEC 7810</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>[Temperature and humidity]</th>
<th>ISO/IEC 10373</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annex 1C, chapter 4.4 'Environmental and electrical specifications', 241)</td>
<td></td>
</tr>
<tr>
<td>Tachograph cards shall be capable of operating correctly in all the climatic conditions normally encountered in Community territory and at least in the temperature range -25°C to +70°C with occasional peaks of up to +85°C, “occasional” meaning not more than 4 hours each time and not over 100 times during the life time of the card.</td>
<td></td>
</tr>
</tbody>
</table>

The Tachograph cards are exposed in consecutive steps to the following temperatures and humidities for the given time. After each step the Tachograph cards are tested for electrical functionality.

1. Temperature of –20 °C for 2 h.
2. Temperature of +/-0 °C for 2 h.
3. Temperature of + 20 °C, 50 % RH, for 2 h.
4. Temperature of + 50 °C, 50 % RH, for 2 h.
5. Temperature of + 70 °C, 50 % RH, for 2 h.

The temperature is increased intermittently to +85 °C, 50 % RH, for 60 min.

6. Temperature of + 70 °C, 85 % RH, for 2 h.

The temperature is increased intermittently to +85 °C, 85 % RH, for 30 min.

<tr>
<td>During operation, Tachograph cards shall conform to ECE R10 related to electromagnetic compatibility.</td>
<td></td>
</tr>
</tbody>
</table>
During operation, Tachograph cards shall be protected against electrostatic discharges.

Tachograph cards must conform to standard

9.4 Static electricity

9.4.1 Contact IC cards

Test voltage: 4000 V.

X-rays

Tachograph cards must conform to standard

9.1 X-rays

Ultraviolet light

5.11 Ultraviolet light

3-wheel

Tachograph cards must conform to standard

ISO/IEC 10373-1:2006/Amd. 1:2012, Identification cards - Test methods - Part 1: General characteristics, Amendment 1

5.22 ICC - Mechanical strength: 3 wheel test for ICCs with contacts

Wrapping

Tachograph cards must conform to standard

MasterCard CQM V2.03:2013

11.1.3 R-L3-14-8: Wrapping Test Robustness

13.2.1.32 TM-422: Mechanical Reliability: Wrapping Test

3.5. Point 2 of Appendix 12 is changed as follows: [GNSS and EGNOS]

3.5.1. The first paragraph is deleted.

[Regardless of the configuration of the Smart Tachograph with or without an external GNSS facility, the provision of accurate and reliable positioning information is an essential element of the effective operation of the Smart Tachograph. Therefore, it is appropriate to require its compatibility with the services provided by the Galileo and European Geostationary Navigation Overlay Service (EGNOS) programmes as set out in Regulation]
(EU) No 1285/2013 of the European Parliament and of the Council (1). The system established under the Galileo programme is an independent global satellite navigation system and the one established under the EGNOS programme is a regional satellite navigation system improving the quality of the Global Positioning System signal]

3.5.2. Requirement GNS_2 is changed as follows:

‘GNS_2 Manufacturers shall ensure that the GNSS receivers in the smart tachographs are compatible with the positioning services provided by GPS, GLONASS and Galileo. Manufacturers may also choose, in addition, compatibility with other satellite navigation systems.’

3.5.3. A requirement GNS_4 is added:

‘GNS_4 GNSS receivers may be also capable of receiving and processing SBAS signals.’
