ANNEX L - GRAPHICAL REPRESENTATION OF RECOMMENDED CHANGES TO R13

List of Figures

Figure L1   Tractors for semi-trailers
Figure L2   Semi-trailers
ANNEX L2: SEMI-TRAILERS

The diagram illustrates the recommended pressure (Pm in bar) for semi-trailers. The graph shows two lines representing the upper and lower recommended pressures. The x-axis represents the pressure in bar (Pm), while the y-axis represents the TR/PR ratio. The lines indicate the recommended pressure ranges at different levels of TR/PR ratio. For example, at a TR/PR ratio of 0.29, the recommended pressure is around 4.5 bar, and at a TR/PR ratio of 0.66, the recommended pressure is approximately 7.5 bar.
